^Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a fund's assets that have changed over the course of a year.

Disclaimer

~Source for 5-Star rating: Value Research Fund Ratings are a composite measure of historical risk-adjusted returns. In the case of equity funds, this rating is based on the weighted average monthly returns for the last 3-year and 5-year periods. These ratings do not take into consideration any entry or exit load. Each category must have a minimum of 10 Funds for it to be rated. Effective, July 2008, an additional qualifying criteria has been included, whereby a fund with less than ₹ 5 crore of average AUM in the past six months will not be eligible for rating. Five-stars indicate that a fund is in the top 10 per cent of its category in terms of historical risk adjusted returns. 43 open-ended Equity: Multi Cap were rated as on November 30, 2010. Value Research Fund Ratings are subject to change every month. The Value Research Ratings are published in Monthly Mutual Fund Performance Report and Mutual Fund Insight. The Ratings are subject to change every month. The Rating is based on primary data provided by respective funds, Value Research does not guarantee the accuracy.
