***PAST PERFORMANCE MAY OR MAY NOT BE SUSTAINED IN FUTURE.** Load is not taken into consideration and Returns are for Growth Option using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non Business Day, then the next Business Day) and have been worked out using the "Excel" spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow.

Assuming ₹ 1,000 invested every month on 5th day of every month (in case 5th is a non Business Day, then the next Business Day), the 1 year, 3 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years and since Inception.

* XIRR - Please refer Page 2 for Definitions

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a fund's assets that have changed over the course of a year.

***XIRR** - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Disclaimer

Value Research Rating Methodology: Value Research Fund Ratings are a composite measure of historical risk-adjusted returns. In the case of equity and hybrid funds this rating is based on the weighted average monthly returns for the last 3 and 5-year periods. These ratings do not take into consideration any entry or exit load. Each category must have a minimum of 10 funds for it to be rated. Effective, July 2008, an additional qualifying criterion has been included, whereby a fund with less than ₹ 5 crore of average AUM in the past six months will not be eligible for rating. Five-stars indicate that a fund is in the top 10% of its category in terms of historical risk-adjusted returns. 43 open-ended Equity Multi Cap Funds were rated as on June 30, 2011. The Value Research Ratings are published in Monthly Mutual Fund Performance Report and Mutual Fund Insight. The Ratings are subject to change every month. The Rating is based on primary data provided by respective funds; Value Research does not guarantee the accuracy.
