QUANTUM GOLD FUND (BROWN) High Risk

(An Open-ended Exchange Traded Fund - Gold)

nent Objecti

The Investment Objective of the Scheme is to generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investments in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold.

Asset Allocation Pattern of the scheme

Types of Instruments	Normal allocation (% of Net Assets)					
	Minimum allocation (% of Net Assets)	Maximum allocation (% of Net Assets)	Risk Profile			
Physical Gold	90%	100%*	Medium to Hig			
Money Market instruments, Short-term Corporate debt securities, CBLO and units of Debt and Liquid Schemes of Mutual Funds	0%	10%	Low			

*As the scheme invests 90% to 100% of the net assets into Gold, the scheme will, by and large, be passively managed fund. However, if and when permitted under SEBI regulations, the scheme may invest in gold related securities including derivatives.

Note : Investment in warehouse receipts and other permitted instruments linked to Gold Prices and units of international gold linked ETFs would be made as and when, and to the extent permitted by regulatory authorities.

It may be clearly understood that the percentages above are only indicative and not absolute.

The Scheme would invest in money market instruments, short-term corporate debt securities, CBLO and units of debt and liquid schemes of mutual funds, in order to meet the liquidity requirements of the Scheme.

stment Strategy

The AMC uses 'passive' approach to try and achieve the Scheme's investment objective. The Scheme does not try to "beett" the markets they track and do not seek temporary defensive positions when markets decline or appear over valued. The AMC does not make any udgments about the investment ment of a particular gold investment nor will it attempt to apply any economic, financial or market analysis. Passive approach eliminates active management risks in regard to over / underperformance vis-à-vis the benchmark. Risk Profile of the Scheme

Mutual Fund units involve investment risks including possible loss of principal. Please read the Scheme Information Document (SID) carefully for details on risk factors and other details before investment. Scheme specific Risk Factors are summarized below:

The Scheme's NAV will react to the gold price movements. The investor may lose money over short or long period due to fluctuation in scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in bullion prices, market movement and over longer periods during market downturns.

Any changes in trading regulations by the stock exchange (s) or SEBI may affect the ability of Authorised Participant to arbitrage resulting into wider premium/ discount to NAV. Any changes in the regulations relating to import and export of gold or gold jewellery (including customs duty, sales tax and any such other statutory levies) may affect the ability of the scheme to buy/sell gold against the purchase and redemption requests received.

The units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of Scheme's holdings. The trading prices of QGF units will fluctuate in accordance with changes in their NAV as well as market supply and demand for the units. However, given that QGF units can be created and redeemed in Creation Units Size directly with the Fund, it is expected that large discounts or premiums to the NAV of QGF units will not sustain due to arbitrage opportunity available.

QUANTUM INDEX FUND (BROWN) High Risk (An Open-ended Exchange Traded Fund)

The investment objective of the scheme is to invest in stocks of companies comprising CNX Nifty Index and endeavour to achieve returns equivalent to the Nifty by "passive" investment. The scheme will be managed by replicating the index in the same weightage as in the CNX Nifty-Index with the intention of minimizing the performance differences between the scheme and the CNX-Nifty Index in capital terms, subject to market liquidity, costs of trading, management expenses and other factors which may cause tracking error

Asset Allocation Pattern of the sche

Types of Instruments	Normal allocation (% of Net Assets)				
	Minimum allocation (% of Net Assets)	Maximum allocation (% of Net Assets)	Risk Profile

Indexing eliminates active management risks with regard to over/ underperformance vis-a-vis a benchmark. The scheme would alter the scrips/weights as and when the same are altered in the CUX-Nifty Index. Also long as a Scheme invests at least 90% of its total assets in the stocks of its Underlying Index, it may also invest in other assets, in Money Market Instruments.
