EQUITY OUTLOOK BY

Christy Mathai

Fund Manager, Equity

S&P BSE Sensex grew by 1.59% in the month of March 2024. S&P BSE Midcap Index increased by 0.01% & S&P BSE Small cap Index declined by -4.8% respectively. Equities across the globe (except China) did well in March. S&P 500 was up 3.2%, tech heavy Nasdaq 100 Composite Index was up 1.85%; MSCI Emerging Markets Index was up by 1.77% in March.

Near term economic indicators continue to trend well; December quarter GDP print was strong at 8.4% yoy (partly supported by base revision) and as result India is slated to finish FY24 on a strong note. Some of the external rating agencies such as Moody's have upgraded FY24 growth to 8% from 6.6% during the month gone by. Reflecting the economic momentum; tax collection has also continued to trend positively with 11.5% yoy growth in March 24. Latest CAD numbers at 1.2% of GDP for 3qFY24, also point to improving external balances supported by services export. On the inflation front, while trajectory is declining, latest reported CPI inflation number came at 5.1%, mainly due to volatile food inflation. This remains higher than RBI's target range of 4%. Corporate India commentary largely reflects the buoyancy in the economy; the only sore point being lack of consumption pick up especially in rural belt.

Quantum Long Term Equity Value Fund (QLTEVF) saw an increase of 0.28% in its NAV in the month of March 2024; Tier-I benchmark S&P BSE 500 TRI and Tier-II Benchmark S&P BSE 200 TRI increased by 0.86% and 1.47% respectively. Technology and Financials driven by banks were a key drag in our portfolio mainly due to NIM pressures.

How have the major sectors fared in FY24?

From portfolio actions during FY24, we added to stocks where upside potential remains high and trimmed/exited out of position where upside was low or negative. Some of the key sectors which we added during FY24 are Banking, Cement, Life Insurance, and consumer durable. We exited out completely from an Industrial name, which we had accumulated during covid period and trimmed out of sectors such as Utilities, Auto, Healthcare and select NBFC.

Where do we find value now?

We continue to remain positive on financial especially private banks. Some of the private banks are trading at decadal low valuation, in a benign credit cycle and should witness reasonable credit growth. Consumer discretionary (Auto-2W) also remain reasonable allocation, although we are trimming in some of these names due to sharp uptick in valuations.

To conclude, our portfolio is well positioned to benefit from cyclical economic upcycle over the medium term with major overweight being Financials and Autos. While there could be uncertainty emerging globally or in India; investors should not be unnerved by the near-term volatility and focus on allocating prudently to equities based on their financial goals. Any sharp correction due to near-term headwinds can offer additional valuation comfort and should be used to allocate more to equities with a long-term perspective.

DEBT OUTLOOK BY

Pankaj Pathak

Fund Manager,
Fixed Income

Indian bond yields were range bound for most of March. The 10-year G-sec traded between 7.04% to 7.08%, broadly tracking the movements in the US treasury yields, ending the month at 7.05% (7.31% for March 2023). While the yields remained more or less unchanged on closing basis, markets did see some heavy buying interest mid-month, pushing the yields to 7.01% levels.

The 10-year US treasury yields hovered in the 4.18% to 4.32% range during the month, ending the month at 4.19%, thus broadly unchanged on closing basis. The swing in the UST yields was broadly in response to the mixed high frequency data sets released during the month, thus influencing the speculations around the timing and quantum of rate cut expectations by the Fed.

Crude oil prices also showed some volatility during the month, with Brent Crude prices moving up from \$84/bbl in Feb end to ~\$88/bbl towards the end of March as the supply/demand outlook tightened and global geopolitical concerns intensified.

Money market rates, however, surged higher due to persistent tightness in the liquidity condition. The 3-months Treasury bill yield rose up to end the month at 7.02% for March against 6.89% as of February end. Yield on the short-term money market securities such as commercial paper (CP) / certificate of deposit (CD) moved up as well. At the month end, 3 months maturity AAA PSU papers were trading close to 7.70%-7.85% levels.

Relative easing in liquidity conditions: Banking system liquidity eased a little and moved into slight surplus on account of huge government spending towards the end of February. However, liquidity condition began to tighten again towards the third week of March moving into a deficit due to higher tax outflows. This led to the RBI resort to 6 VRR (Variable Rate Repo auctions – a lending tool by the RBI) in which banks showed major participation. Owing to some pick up in government spendings, the daily average liquidity for the month of March 2024 was close to a deficit of ~Rs 38,000 crores against a deficit of ~Rs 1,86,000 crores for the month of February. Much of the prevailing tight liquidity was due to slow pace of government spending in the previous months, leading to accumulation of huge government balances, while the core liquidity (banking system liquidity adjusted for government cash balance) continued to remain in a surplus of around Rs. 2 trillion.

Monetary policy outcome and Inflation:

In the April 2024 meeting, the Monetary policy Committee of the RBI kept the **policy rates unchanged** and maintained the stance as 'withdrawal of accommodation' with a 5:1 majority vote, thus

delivering yet another 'do-nothing policy'. On the liquidity front, the RBI decided to continue with its two-way operations through mix of instruments (VRR and VRRR) for the orderly evolution of money market rates.

While the RBI sought some comfort from falling core inflation and strength in Rabi production and the expectation of a normal monsoon, it continued to **remain cautious on the inflation outlook** in lieu of the evolving food inflation trajectory and its vulnerability to supply side shocks.

The CPI inflation remained flat at 5.1% in February 2024. While the headline CPI inflation has been elevated lately owing to volatility in food prices, the Core CPI, (which excludes food and energy prices) has been declining consistently over the last twelve months (**3.4% y-o-y for February 24**, below RBI's 4% target).

Prevailing elevated crude oil prices do pose a risk to inflation. However, the price passthrough between global crude oil and domestic fuel prices seems to be broken. In contrast to rising crude oil prices, the oil market companies have slashed prices of petrol and diesel by Rs 2 per ltr each. The LPG prices were also reduced by around 11% in March. The full impact of these cuts on inflation is yet to be seen.

The RBI estimates CPI inflation to fall to an average of 4.5% in FY25. We see high probability of a downward surprise to this inflation estimate. In our opinion, the true extent of disinflation is underestimated in the headline CPI numbers owing to volatile food prices. The ex-vegetable CPI, which captures about 94% of total CPI basket, is trending well below 4% now. Based on the current trend, the core CPI (ex-food and fuel) will likely remain below 3.5% for the entire FY25.

Easing inflation pressure should lower the inflation risk premium on bonds by reducing the yield spread on government bonds over the policy repo rate. This in turn can bring down the bond yields even without a rate cut by the RBI. Any increase in the rate cut probabilities would further intensify the downward trend in bond yields.

Demand – supply dynamics look favorable: The central government has pegged its gross market borrowing at Rs. 14.1 trillion in FY25. This is Rs. 1.3 trillion lower than the FY24 market borrowing of Rs. 15.4 trillion. Additionally, the H1FY25 borrowing is pegged at Rs. 7.5 trillion or 53% of total bond annual supply. This is significantly lower than the typical trend of around 60% H1 supply. Thus, lower supply shall work in favor of bonds.

On the other hand, the strong demand from FPIs ahead of the global bond index inclusion and other market participants like Pension Funds and Insurance is likely to persist, which is expected to be an added positive for domestic yields.

Outlook

We hold a positive outlook on the fixed income market considering:

- Favourable demand supply mix in government bonds
- Increasing participation by foreign investors with index inclusion
- Declining Inflation trend
- Possibility of rate cuts by the RBI
- Softening global environment with declining global growth and expectation of rate cuts by major central banks

We expect bond yields to decline over the coming months. With higher starting yield and possibility of decline in bond yields over medium term, return potential of fixed-income funds investing in long duration bonds look good. Long term bonds tend to perform better during falling interest rate environment.

Investors with 2-3 years holding period can consider dynamic bond funds for their fixed income allocation. Dynamic bond funds have flexibility to change the portfolio positioning as per the evolving market conditions. This makes dynamic bond funds better suited for the long-term investors in this volatile macro environment.

Investors with a short-term investment horizon and with little desire to take risks, can invest in liquid funds which invest in government securities and do not invest in private sector companies which carry lower liquidity and higher risk of capital loss in case of default.

Gold Outlook by

Chirag Mehta

Chief Investment Officer

Ghazal Jain

Fund Manager -
Alternative Investment

The Fed in its March 20th policy decision kept its key interest rate unchanged and more importantly signalled that it remains on track to cut interest rates by 75 basis points in 2024, easing market concerns of fewer rate cuts amid recent data showing sticky inflation. Markets are now pricing in a greater chance, around 65%, that the Fed will begin cutting interest rates at the June policy meeting, up from 55% before the Fed policy. Both equity markets and gold have rallied in March in response to this dovish hold.

In the quarterly economic projections, the Fed indicated that it sees the US economy growing at 2.1% this year compared to 1.4% expected in December's quarterly projections, and the unemployment rate is seen at 4% in 2024, versus 4.1% anticipated. The Personal Consumption Expenditures Price Index, excluding food and energy, is projected to rise at a 2.6% rate this year, compared to the 2.4% previously predicted. It is clear that the Fed doesn't see the US economy falling into recession and expects inflation to continue to trend toward its 2% goal.

International gold prices moved past the \$2200 barrier for the first time closing the month ~8.80% higher at \$2208 per ounce. Domestic gold prices too rallied close to INR 70,000 levels per 10 grams, up ~7.20% for the month.

The Personal Consumption Expenditures (PCE) Price Index, increased to 2.5% y-o-y in February. The reading met expectations and followed January's 2.4% increase. The Core PCE Price Index rose at an annual pace of 2.8%, in line with the market expectations and slowing from a 2.9% increase reported last month. Following the release, Fed Chair Jerome Powell noted that the data "is along the lines of what we would like to see". While inflation has been slowing, growth is also weakening making a

QUANTUM'S VIEW FOR MARCH 2024

case for rate cuts a more probable one. US manufacturing sector weakened further in February with the US ISM Manufacturing PMI falling to 47.8, below estimates of 49.5, and 49.1 in January.

While hiring in the US continued at a strong pace in February, it was accompanied by a slowdown in wage growth and an uptick in unemployment. Nonfarm Payrolls in the US rose by 275,000 in February. This surpassed the market expectation of 200,000. The payroll data for December and January was revised down by a combined 167,000. The Unemployment Rate climbed to 3.9% from 3.7% in January. Average Hourly Earnings were up 4.3% on a yearly basis, below the market expectation and January's reading of 4.4%.

All in all, US economic data continues to reaffirm bets for an imminent shift in US monetary policy stance.

While transition to lower interest rates bodes well for gold, much of it seems to have already been priced in. This could limit the upside for the precious metal going forward. Further meaningful upside from these levels can come on the back of a more dovish stance by the US central bank in response to a sharp deceleration in growth or a financial accident - S&P Global has downgraded five regional US banks due to their exposure to commercial real estate which has been struggling with higher borrowing costs and low occupancy rates post the pandemic, meanwhile burgeoning US public debt continues to be a cause for concern with Larry Fink of BlackRock Inc, the world's largest asset manager, recently saying the situation "is more urgent than I can ever remember".

On the other hand, if the Fed doesn't meet the market's expectations with regards to quantum and timing of rate cuts given that inflation continues to be sticky above its target, gold could see some consolidation. Downside will be limited by fundamental backdrop of interest rates peaking, lingering geopolitical conflicts in Russia-Ukraine and the Middle East and strong central bank gold buying.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Long Term Equity Value Fund - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. ##As TRI data is not available since inception of the scheme, Tier II benchmark performance is calculated using composite CAGR S&P BSE 200 index PRI Value from March 13, 2006 to July 31, 2006 and TRI Value since August 1, 2006. Refer to the section "GIPS Compliance" on Page no. 17 for GIPS related disclosure. Returns are net of total expenses

Product Labeling

Name of the Scheme & Tier I Benchmark	This product is suitable for investors who are seeking*	Risk-o-meter of Scheme	Tier I Benchmark	Tier II Benchmark
Quantum Long Term Equity Value Fund (An Open Ended Equity Scheme following a Value Investment Strategy) Tier I Benchmark: S&P BSE 500 TRI	<ul style="list-style-type: none"> Long term capital appreciation Invests primarily in equity and equity related securities of companies in S&P BSE 200 index. 	<p>Investors understand that their principal will be at Very High Risk</p>		

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

^^ Note:

Risk Free Rate assumed to be 7.90% (FBIL Overnight MIBOR for 28th March 2024) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.

QUANTUM ELSS TAX SAVER FUND

An Open Ended Equity Linked Saving Scheme with a Statutory Lock in of 3 years and Tax Benefit

Investment Objective

To achieve long-term capital appreciation by investing primarily in shares of companies that will typically be included in the S&P BSE 200 Index and are in a position to benefit from the anticipated growth and development of the Indian economy and its markets.

3 Years SIP	360	490	484	480	453	21.24%	20.29%	19.82%	15.65%
1 Year SIP	120	143	141	141	134	37.38%	34.87%	34.96%	23.01%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum ELSS Tax Saver Fund - Direct plan - Growth option. Scheme performance has been calculated using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years, and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses

Product Labeling

Name of the Scheme & Tier I Benchmark	This product is suitable for investors who are seeking*	Risk-o-meter of Scheme	Tier I Benchmark	Tier II Benchmark
Quantum ELSS Tax Saver Fund (An Open Ended Equity Linked Saving Scheme with a Statutory Lock in of 3 years and Tax Benefit) Tier I Benchmark: S&P BSE 500 TRI	<ul style="list-style-type: none"> Long term capital appreciation Invests primarily in equity and equity related securities of companies in S&P BSE 200 index and to save tax u/s 80 C of the Income Tax Act. Investments in this product are subject to lock in period of 3 years. 	 <p>Investors understand that their principal will be at Very High Risk</p>		

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

^^ Note:

Name of Quantum Tax Saving Fund has been changed to Quantum ELSS Tax Saver Fund effective 1st December, 2023.

Risk Free Rate assumed to be 7.90% (FBIL Overnight MIBOR for 28th March 2024) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.

QUANTUM MULTI ASSET ALLOCATION FUND

An Open-Ended Scheme Investing in Equity & Equity Related Instruments, Debt & Money Market Instruments and Gold Related Instruments

Investment Objective

The investment objective of the Scheme is to generate long term capital appreciation / income by investing in Diversified portfolio of Equity & Equity Related Instruments, Debt & Money Market Instruments and Gold Related Instruments.

#S&P BSE 200 TRI, ##S&P BSE Sensex TRI.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Equity Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses

Exit Load:

Provisions	% of Exit Load
10% of units if redeemed or switched out on or before 365 days from the date of allotment	NIL
Remaining 90% of units if redeemed or switched out on or before 365 days from the date allotment	1%
If redeemed or switched out of units after 365 days from the date of allotment	NIL

Note: Redemptions / Switch outs of units will be done on First In First Out (FIFO) basis. The above mentioned Exit Load shall be equally applicable to the special products such as Systematic Withdrawal Plan (SWP) / Systematic Transfer Plan (STP) and Switches etc. However, no load shall be charged for switching in between option / plan within the scheme.

Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899

TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the Regular Plan.

^^ Note:

Risk Free Rate assumed to be 7.90% (FBIL Overnight MIBOR for 28th March 2024) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

QUANTUM ESG BEST IN CLASS STRATEGY FUND

An Open-ended equity scheme investing in companies following Environment, Social and Governance (ESG) theme assessed through a Best In Class Strategy

1 Year SIP	120	131	133	125	18.60%	20.60%	8.30%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Gold Savings Fund - Direct plan - Growth option. Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.
 Returns are net of total expenses.

QUANTUM MULTI ASSET FUND OF FUNDS

An Open Ended Fund of Funds Scheme
Investing in schemes of Quantum
Mutual Fund

Investment Objective

The investment objective of the Scheme is to generate modest capital appreciation while trying to reduce risk (by diversifying risks across asset classes) from a combined portfolio of equity, debt / money markets and Gold schemes of Quantum Mutual Fund. The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise/ that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. There can be no assurance that the investment objective of the Scheme will be realized.

SIP Performance as on March 31, 2024

	Total Amount Invested (₹'000)	Mkt Value as on Mar 31, 24 (₹'000)	Tier I - Benchmark# Returns (₹'000)	Additional Benchmark Returns (₹'000)##	Returns (XIRR*) (%)	Tier I - Benchmark# Returns (%)	Additional Benchmark Returns (%)##
SIP Since Inception	1,400	2,528	2,733	3,465	9.70%	10.93%	14.66%
10 Years SIP	1,200	1,978	2,130	2,593	9.67%	11.08%	14.76%
7 Years SIP	840	1,208	1,274	1,487	10.24%	11.74%	16.08%
5 Years SIP	600	793	814	927	11.13%	12.19%	17.51%
3 Year SIP	360	430	430	453	11.92%	12.06%	15.65%
1 Year SIP	120	131	131	134	17.34%	17.01%	23.01%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Multi Asset Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years and since Inception.

Returns are net of total expenses

*CRISIL Dynamic Bond A-III Index (20%) + CRISIL Liquid Debt A-I Index (25%) + Nifty 50 TRI (40%) + Domestic price of Gold (15%). w.e.f. April 3, 2023, benchmark of the scheme has been changed. It is a customized index and it is rebalanced daily. ##S&P BSE Sensex TRI. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899

TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the Regular Plan.

^^ Note:

Risk Free Rate assumed to be 7.90% (FBIL Overnight MIBOR for 28th March 2024) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

QUANTUM NIFTY 50 ETF FUND OF FUND

Tracking Error: is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better

***Portfolio Turnover Ratio** is the percentage of a funds assets that have changed over the course of a year

QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Erstwhile name of the scheme has been changed from Quantum Nifty ETF to Quantum Nifty 50 ETF w.e.f February 1st, 2022.

Investment Objective

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error.

HOW TO READ FACTSHEET

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹ 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1%, the investor will enter the fund at ₹ 101.

Note

SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹ 100 and the exit load is 1%, the redemption price would be ₹ 99 Per Unit.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
