George Thomas
Fund Manager, Equity

The S&P BSE Sensex rose by 3.6% in the month of April, supported by stable macros and corporate earnings. S&P BSE Midcap Index & S&P BSE Small cap Index increased by 6.0% and 7.3% respectively. A rate hike pause by RBI triggered a rally in realty and auto stocks. Barring IT and consumer durables, all sectoral indices outperformed Sensex.

Global indices had mixed performance during the month. S&P 500 advanced by 1.6%, broader MSCI EM index declined by 1.1% and MSCI World Index advanced by 1.8%. Rally in S&P 500 was driven by signs of moderation in inflation and expectation of Fed rate near the peak. The scale of current US banking crisis doesn't appear to be as broad based like past crisis. The fear of contagion effects could prevent Fed from further hikes. Decline in EM index is driven by weaker than expected activity levels in China and re-emergence of China-Taiwan conflicts.

In terms of flows for the month, FPIs bought USD 1.4bn. Domestic institutional investors were buyers to the tune of USD 1.7 bn. Amid global slowdown, India's relatively stable macro environment along with low probability of further rate hikes could keep the positive momentum in foreign flows.

Quantum Long Term Equity Value Fund (QLTEVF) saw an increase of 3.9 % in its NAV in the month of April 2023. Tier-I benchmark S&P BSE 500 and Tier-II Benchmark S&P BSE 200 advanced by 4.6% and 4.4% respectively. Under allocation to Consumer Staples, Industrials and Materials were the key contributors to the underperformance for the month. Cash in the scheme stood at approximately 4.95% at the end of the month. The portfolio is valued at 12.0x consensus earnings vs. the S&P BSE Sensex valuations of 17.0x based on FY25E consensus earnings; thus, displaying value characteristics.

#### Corporate Earnings largely meet expectations:

The broader rally in Indian market was triggered by a reasonably stable result season barring select sectors like IT and Consumer Durables and return of Foreign investors as we are likely near the peak interest rates. Overall corporate results were on expected lines. The cyclical economic recovery, which commenced post covid-19, was delayed due to rapid rate hikes and high inflation over the past few quarters. Amid a likely global slowdown, inflation and interest rates are likely to moderate from current levels and provide more legs to the economic recovery. The ongoing result season has fared reasonably well across sectors. Strong credit growth in banks, decent volume growth in cement sector, volume uptick in autos and stable order inflow in capital goods sector all point to persistence of economic momentum. Domestic macro indicators like PMI indices, record GST collection and a moderation in inflation index corroborate the same.

#### Long Term structural growth story in IT Sector remains intact:

The fund has an over-weight position in the IT sector. IT sector has come under pressure following fears of slower tech spend growth amid the banking crisis in US. Indian IT companies' high share of revenue from BFSI at ~30% makes the market wary. The intensity of current crisis looks mild compared to past down cycles. Indian IT's aggregate revenue is conservatively estimated at ~19.9% of global tech spends

(11.1% share in CY12), leaving ample scope for long term growth. A large bench of fresh recruits and ease of supply side pressures would help IT firms to improve profitability in the near term. Unlike CY17-19 where growth rates materially slowed down, there is no imminent risk of a large-scale technology transition. Given the long-term structural story, the growth rates over the next 4-5 years are likely to be reasonable. Most companies have improved the capital allocation policy over the past few years which calls for a higher steady state valuation multiple compared to historic average. The embedded growth rates in stock prices of Tier 1 IT names are at a reasonable discount to long term industry growth rates which makes the valuation attractive.

A potential pause in global interest rate hikes, moderation in inflation and persistence of corporate earnings upcycle makes us positive on Indian equities. Investors with a long-term horizon can utilize the current opportunity to build their equity allocation in a staggered manner.

Pankaj Pathak
Fund Manager,
Fixed Income

Indian bonds yields came down sharply in April after the surprise pause in the rate hiking cycle (against market consensus expectation of 25bps hike) at start of the month. The downward momentum in yields was further boosted by the lower-than-expected inflation print for March which came in at 5.66% vs consensus estimate of ~5.9%.

The 10-year benchmark government bond (Gsec) yield fell by 20 basis points to end the month at 7.12% vs 7.32% in the previous month.

Money market rates also eased during the month supported by influx of liquidity amid increased government spending post financial year closing. The yield on the AAA rated 3 months commercial papers (CPs) fell from ~7.30% on March 31, 2023 to 7.15% on April 30, 2023.

In its first bi-monthly monetary policy of FY24, the Monetary Policy Committee (MPC) left the key repo rate unchanged. This came as a positive surprise for the bond market as there was a broader expectation of a 25-basis point rate hike.

RBI's commentary was mixed. On one hand, the RBI retained the policy stance as 'withdrawal of accommodation' and used phrases like 'for this meeting only' and 'a pause not pivot' to indicate that rate hiking cycle is not over yet. While on the other hand, the governor made repeated reference to the potential impact of the effective 290 basis points of rate increases delivered over the last 12 months.

The bond rally following the monetary policy suggests that the bond market is more aligned with the view that the reporate has peaked at 6.50% and the RBI will remain on extended pause before start cutting interest rates. This view is also supported by an expectation that inflation will come down sharply over the next 3-6 months and will stay close to 5% in FY24.

There are clear signs of inflation easing. The headline CPI inflation eased to 5.66% YoY in March 23 from 6.44% YoY in February 23, core inflation also registered 5.95% YoY in March 23, its first sub-6% print in 18 months.

It's vital to highlight the high inflation of the last year was mainly contributed by spike in food and fuel costs amid the Russia-Ukraine war and budding demand after easing off Covid-19. The impact of these one-off price shocks is now fading. Over the next 2-3 month, the favourable base effect (of high prices last year) should bring down the CPI inflation sharply below 5%.

When we look closely into the host of items in the CPI baskets, we find that the month-on-month intensity has been easing off sequentially for most of the items. Among the food and beverages group components like vegetables, protein and others have shown a sizable decline. These easing food prices contributed to easing of headline inflation. However, between January-March 23, month-on-month change in CPI, excluding volatile prices of fruits, vegetables and gold, is merely ~0.24%. The current trend supports a decline in inflation to the 4%-5% band without needing any radical policy treatment.

In addition to the falling inflation, the RBI will also have a supportive external environment to end the rate hiking cycle.

Globally, inflation is coming down and growth is slowing. The economic outlook is further clouded by the series of bank failures in the US.

In its latest meeting in May, the US federal reserve hiked the fed funds rate by 25 basis points as expected. However, it dropped the guidance of additional tightening being appropriate from the policy statement. This is seen as the last rate hike with the fed funds rate peaking at current 5.0%-5.25% range. This should stop/reverse the Dollar rally and bring relief for the emerging markets like India.

India's external position has also strengthened due to meaningful improvement in the current account balance. The current deficit is likely to be a lot narrower at near 2% of GDP in FY23 than the earlier estimates of over 3%. With the drop in crude oil prices, increased inward remittances and booming services exports, India's external position is likely to remain comfortable making the domestic economy more resilient against external shock.

#### Outlook

With the falling inflation, peaked policy rates and comfortable external position, the backdrop is supportive for the bond market.

However, from a near term perspective, almost all the positives are already in price. The 10 year Government bond (G-sec) yield has come down from 7.45% in March to near 7.0% now. Unless the RBI shifts towards a rate cut, bond yields are unlikely to sustain below 7%.

We would continue to expect the 10-year government bonds to trade between a range of 7.00%-7.30%. Since, currently the yield is near the lower bound, we expect a pull back in near term.

In line with our near-term cautious view, we have lowered the portfolio duration of the actively managed bond fund as a tactical position.

Notwithstanding the near-term valuation concerns, we maintain our constructive outlook for long bonds in medium term. With bond yields around 7%, much of the government bond yield curve is offering reasonably high positive real yield. Based on the 4 quarter ahead expected CPI inflation of 5.2% and the 1-year government bond yield at 7%, real interest rate is around 180 basis points.

Also, with the rate hiking cycle nearing end and inflation trending down, probability of capital gains in long term bonds over the medium term has increased. Investors with over 2-3 years investment horizon should allocate to dynamic bond funds which tends to benefit in this kind of interest rate environment.

Dynamic bond funds have the flexibility to change the portfolio positioning as per the evolving market conditions which makes dynamic bond funds better suited for long-term investors in this volatile macro environment.

Investors with shorter investment horizon and low risk appetite should stick with liquid funds. Tightening liquidity condition will continue to put upward pressure on short term rate and is in turn positive for short term debt fund categories like liquid fund. We would expect further improvement in return potential of these categories as interest accrual on short term debt instruments have risen meaningfully.

Since the interest rate on bank saving accounts are not likely to increase quickly while the returns from liquid fund are already seeing an increase, investing in liquid funds looks more attractive for your surplus funds. Investors with little desire to take risks, should invest in liquid funds which own government securities and do not invest in private sector companies which carry lower liquidity and higher risk of capital loss in case of default.

#### **Gold Outlook by**

Chirag Mehta
Chief Investment Officer

**Ghazal Jain** 

Fund Manager -Alternative Investment Gold, barring some rangebound movement, held its ground for most of April as markets seemed to have priced in the Federal Reserve's "final" rate hike in this tightening cycle to come in on May 3rd.

In the background, the US economy continued to witness mixed macros.

Headline inflation in the US cooled to 5% in March from 6% in the previous month. This reading was the lowest since May 2021. On the other hand, annual Core CPI edged higher to 5.6% from 5.5% in February. In the 12 months ending March, the Personal Consumption Expenditure index increased 4.2% after climbing 5.1% in February.

The March jobs report revealed that Nonfarm Payrolls rose by 236,000 in March, slightly below the market expectation of 240,000. Additionally, the Unemployment Rate edged lower to 3.5% from 3.6% while the Average Hourly Earnings, edged lower to 4.2% from 4.6%. The number of job openings in the US dropped to a nearly two-year low.

Consumer Confidence Index declined to 101.3 in April from 104 in March, the lowest reading since July 2022.

GDP growth expanded by an annualized rate of 1.1% in Q1, missing estimates of 2.0% growth and way below the 2.6% growth seen in Q4.The ISM Manufacturing PMI indicated contraction, but at a softer pace, edging higher to 47.1 from 46.3.

On the other hand, earnings season in the US was good. Majority of consumer facing companies, especially tech companies, did not see much weakness. But renewed concerns about the health of banking sector eclipsed the positive earnings.

Following the bank collapses in March, bank stocks in the US came under pressure again in the final weeks of the month after deposit outflows from First Republic Bank saw its stock price plunge. This is the second-biggest bank failure in US history and the fourth regional bank collapse since March stirring fears over the health of the sector. Things seemed to calm down when the bank was taken over by JP Morgan, though only till other regional lenders sank on concerns of contagion. The ongoing stress in the US banking system because of the aggressive rate hiking cycle has stirred risk aversion, weighed on US Dollar and Treasury yields and helped gold rediscover its momentum.

Hawkish comments from the European Central Bank policymakers boosted the Euro, hurting the US Dollar, and supporting gold.

Chart: Gold is inversely correlated to the strength in the bank sector; ceteris paribus

Source: Bloomberg; Data as of May 4th, 2023 | Past Performance may or may not be sustained in future

The de-dollarization trend got a fillip with many countries in Asia, Europe and Latin America attempting to break away from the dollar's dominance by entering into bi-lateral agreements to settle trades in their currencies instead of the US dollar. This also weighed on the US currency and supported the yellow metal.

International gold prices closed the month at \$1983 per ounce, 0.20% higher. Rupee appreciated by 0.50% as weakness in Dollar continued, pushing domestic gold prices up by 0.30%.

#### **May Update**

Concerns about the US Debt ceiling grew after US Treasury Secretary Janet Yellen warned the US government could default on some of its payments by June 1st if the debt limit is not increased. This hurt sentiment and weighed on US dollar and US Treasury bond yields as there is less than a month for policymakers to reach a resolution.

As expected, the Fed hiked rates by quarter point to 5.0-5.25%, the highest level in 16 years. The FOMC statements hinted at flexibility and opened the door to a pause by dropping "some additional policy firming may be appropriate" and instead saying future interest rate decisions will be made on a meeting-by-meeting basis. This was considered dovish by markets. Gold prices jumped up to \$2060 levels in reaction. Powell however refrained from confirming a pause in rate hikes in June and dismissed rate cuts in 2023 given their view that it will take some time for inflation to come down. The FOMC also reaffirmed that it will continue to trim its balance sheet according to plan. Gold settled lower at \$2040 levels post the Fed meeting as markets digested the comments and profit booking kicked in.

#### **Outlook for May**

We agree with market consensus that a Fed pause after May is likely. Worries about the impact of rising interest rates on financial stability will probably lead the Fed to be cautious hereon and possibly stop hiking sooner than they've been communicating. According to the CME Group Fed Watch Tool, markets are pricing in a nearly 90% chance of status quo from the Fed in its next meeting in June. Markets are also pricing in 3 rate cuts totalling 75 basis points in 2023, with the first cut coming as early as July, up from 2 that were being priced in prior to the collapse of the First Republic Bank.

After almost halving headline inflation over the past year, the Federal Reserve is finding it tough to cool inflation further. While food and energy prices are down, services inflation continues to be sticky. In case the Fed decides to act on its "prepared to do more" statement and proceeds with another hike, it risks overtightening and damaging the economy. While the unemployment rate hasn't moved up, there is some negative momentum in the labour market. If this momentum gathers steam, joblessness could fast spiral out of control. The risks of a downturn have also risen following the collapse of regional US banks, which has tightened credit conditions further. This could result in a sharp, sudden pivot by the Fed over the coming months, similar to its reaction during past instances of financial market instability, emanating from macro concerns this time. A policy pivot with the background of sticky inflation will be an ideal environment for gold.

With visibility on peaking of interest rates, headwinds for gold look limited as the probability for US Treasury yields and US Dollar to move higher from here looks low. In the short term, markets will continue to readjust its view on expected interest rate trajectory and will continue to rally on any compelling signs of slowing growth, instability in financial markets and thereby a dovish fed.

In the medium to long term, the risk-reward dynamics look favourable for gold as we approach the end to monetary tightening, lower Treasury yields, a weaker US Dollar and deterioration in economic conditions.

Mr. George Thomas and Mr. Christy Mathai co-manages 2 scheme of the Quantum Mutual Fund.

#### Product Labeling

Name of the Scheme & Tier I Benchmark	This product is suitable for investors who are seeking*	Risk-o-meter of Scheme	Tier I Benchmark	Tier II Benchmark
Quantum Long Term Equity Value Fund (An Open Ended Equity Scheme following a Value Investment Strategy)	Long term capital appreciation     Invests primarily in equity     and equity related securities     of companies in S&P BSE 200     index.	Moderate Management Italy	Moderate Managements 1-153	Moderate Medicates
Tier I Benchmark: S&P BSE 500 TRI		Investors understand that their principal will be at Very High Risk		

<sup>\*</sup>Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

#### ^^ Note:

Risk Free Rate assumed to be 6.9% (FBIL Overnight MIBOR for 28th April 2023) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability. Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market. Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.

# QUANTUM TAX SAVING FUND

An Open Ended Equity Linked Saving Scheme with a Statutory Lock in of 3 years and Tax Benefit

#### ී Investment Objective

To achieve long-term capital appreciation by investing primarily in shares of companies that will typically be included in the S&P BSE 200 Index and are in a position to benefit from the anticipated growth and development of the Indian economy and its markets.

#### Scheme Features

#### Fund Manager

#### SIP Performance as on April 28, 2023

	Total Amount Invested (₹ '000)	Mkt Value as on Apr 28, 23 (₹ '000)	Tier I - Benchmark# Returns (₹ '000)	Tier II - Benchmark## Returns (₹ ′000)	Additional Benchmark Returns (₹ '000)###	Returns (XIRR*) (%)	Tier I - Benchmark# Returns (%)	Tier II - Benchmark## Returns (%)	Additional Benchmark Returns (%)###
SIP Since Inception	1,720	4,374	4,774	4,763	4,695	12.13%	13.21%	13.18%	13.01%
10 Years SIP	1,200	2,124	2,414	2,406	2,403	11.03%	13.45%	13.38%	13.36%
7 Years SIP	840	1,218	1,356	1,355	1,383	10.49%	13.51%	13.49%	14.07%
5 Years SIP	600	810	861	856	857	12.05%	14.56%	14.29%	14.34%
3 Years SIP	360	437	443	441	443	13.14%	14.14%	13.76%	14.17%
1 Year SIP	120	124	123	123	126	5.87%	5.56%	5.37%	9.30%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Tax Saving Fund - Direct plan - Growth option. Scheme performance has been calculated using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 7 years, 7 years, 10 years, and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. \*XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses

Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899

TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the Regular Plan.

#### ^^ Note:

Risk Free Rate assumed to be 6.4% (FBIL Overnight MIBOR for 31st May 2023) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

# **QUANTUM INDIA ESG**

An Open ended equity scheme investing in companies following Environment, Social and Governance (ESG) theme

#### **ී Investment Objective**

3 Years SIP	360	425	431	381	11.27%	12.23%	3.71%
1 Year SIP	120	134	135	126	23.54%	24.18%	10.25%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Gold Savings Fund - Direct plan - Growth option. Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 70 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. \*XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses.

# **QUANTUM MULTI ASSET FUND OF**

An Open Ended Fund of Funds Scheme Investing in schemes of Quantum Mutual Fund

#### **Investment Objective**

The investment objective of the Scheme is to generate modest capital appreciation while trying to reduce risk (by diversifying risks across asset classes) from a combined portfolio of equity, debt / money markets and Gold schemes of Quantum Mutual Fund. The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise/ that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. There can be no assurance that the investment objective of the Scheme will be realized.

#### SIP Performance as on April 28, 2023

	Total Amount Invested (₹'000)	Mkt Value as on Apr 28, 23 (₹'000)	Tier I - Benchmark# Returns (₹'000)	Additional Benchmark Returns (₹'000)##	Returns (XIRR*) (%)	Tier I - Benchmark# Returns (%)	Additional Benchmark Returns (%)##
SIP Since Inception	1,290	2,092	2,281	2,739	8.70%	10.22%	13.39%
10 Years SIP	1,200	1,872	2,039	2,403	8.64%	10.26%	13.36%
7 Years SIP	840	1,132	1,218	1,383	8.42%	10.50%	14.07%
5 Years SIP	600	746	784	857	8.70%	10.70%	14.34%
3 Year SIP	360	407	416	443	8.21%	9.73%	14.17%
1 Year SIP	120	126	126	126	9.27%	10.42%	9.30%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Multi Asset Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years and since Inception.

Returns are net of total expenses

TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the Regular Plan.

#### ^^ Note:

Risk Free Rate assumed to be 6.4% (FBIL Overnight MIBOR for 31st May 2023) for calculating Sharpe Ratio. Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

#### Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

# QUANTUM GOLD FUND An Open Ended Scheme Replicating/ Tracking Gold

#### **Marie 1** Investment Objective

To generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold.

# Now start small to build your gold allocation with QGF

\*Please note the above is a suggested fund allocation and not to be considered as an investment advice or recommendation

Tracking Error is calculated on Annualised basis using 3 years history of daily returns.

Definitions

Tracking Error: is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better

\*Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year

## QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Erstwhile name of the scheme has been changed from Quantum Nifty ETF to Quantum Nifty 50 ETF w.e.f February 1st, 2022

#### **Investment Objective**

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error.

DETAILS	QUANTUM GOLD FUND					
Type of Scheme	An Open Ended Scheme Replicating / Tracking Gold					
This Product is suitable for Investors who are seeking*	Long term returns     Investments in physical gold					
Risk-o-meter of scheme	Risk-o-meter of Tier I Benchmark					
Investment Objectives	To generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold.					
Fund Manager	Ms. Ghazal Jain (Since June 2, 2020)					
Fund Manager Total Experience	4.7 yrs					
Inception Date (Date of Allotment)	February 22, 2008					
Entry Load	Not Applicable* (*In terms of SEBI circular no. SEBI/IMD/CIR No. 4/ 168230/09 dated June 30, 2009 has notified that, w.e.f. August 01, 2009 there will be no entry load charged to the schemes of the Mutual Fund and the upfront commission to distribution will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor)					
Exit Load	NIL

Default Plan	NA NA					
Investment Options	NA NA					
Minimum Application Amount (Under each option)	Directly with Fund: The Investors can create / redeem in exchange of portfolio Deposit and Cash Component in creation of unit size at NAV based Price.  On the Exchange: Approx equal to price of ½ gram of Gold quoted on the NSE. On NSE, the units can be purchased / sold in minimum lot of 1 unit and in multiples thereof.					
Lock-in Period	NIL					
Net Asset Value (NAV)	Every Business Day					
Tier I - Benchmark Index	Domestic Price of Physical Gold					

<sup>\*</sup>Investors should consult their financial advisors if in doubt about whether the product is suitable for them.

DETAILS	QUANTUM NIFTY 50 ETF					
Type of Scheme	An Open Ended Scheme Replicating / Tracking Nifty 50 Index					
This Product is suitable for Investors who are seeking*	Long term capital appreciation     Investments in equity and equity related securities of companies in Nifty 50 Index					
Risk-o-meter of scheme	Risk-o-meter of Tier I Benchmark  Risk-o-meter of Tier I Benchmark					
Investment Objectives	The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error.					
Fund Manager	Mr. Hitendra Parekh (Since July 10, 2008)					
Fund Manager Total Experience	29.5 yrs					
Inception Date (Date of Allotment)	July 10, 2008					
Entry Load	Not Applicable* (*In terms of SEBI circular no. SEBI/IMD/CIR No. 4/ 168230/09 dated June 30, 2009 has notified that, w.e.f. Investment Options	NA NA					
Minimum Application Amount (Under each option)	Directly with Fund: The investors can create / redeem in exchange of Portfolio Deposit and Cash Component in creation unit size at NAV Price.  -2000 Units and in multiples of thereof.  On the Exchange: At prices which may be close to the NAV of Q Nifty Units. On NSE, the units can be purchased / sold in minimum lot of 1 unit and in multiples thereof. The units of Q Nifty issued under the scheme will be approximately equal to the price of 1/10 (one-tenth) of the Nifty 50 Index.					
Lock-in Period	NIL					
Net Asset Value (NAV)	Every Business Day					
Tier I - Benchmark Index	Nifty 50 - Total Return Index					

<sup>\*</sup>Investors should consult their financial advisors if in doubt about whether the product is suitable for them.

#### **PROOF TO READ FACTSHEET**

#### **Fund Manager**

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

#### **Application Amount for Fresh Subscription**

This is the minimum investment amount for a new investor in a mutual fund scheme.

#### **Minimum Additional Amount**

This is the minimum investment amount for an existing investor in a mutual fund scheme.

#### **Yield to Maturity**

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

#### SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.

#### NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

#### Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

#### **Entry Load**

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is  $\stackrel{?}{\sim}$  100 and the entry load is 1%, the investor will enter the fund at  $\stackrel{?}{\sim}$  101.

#### Note

SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor

#### Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹100 and the exit load is 1%, the redemption price would be ₹99 Per Unit.

#### **Modified Duration**

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield

#### **Standard Deviation**

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, its means its range of performance is wide, implying greater volatility.

#### **Sharpe Ratio**

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

#### Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

#### **AUM**

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

#### **Holdings**

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

#### **Nature of Scheme**

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

#### **Rating Profile**

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

### **9** STATUTORY DETAILS & RISK FACTORS
