Founded in 2006, Quantum Mutual Fund has established a strong legacy in delivering simple yet thoughtful investment solutions, tailored to meet the needs of all investors. Guided by a disciplined approach to investment and research, we are committed to safeguarding portfolios through the inevitable market fluctuations. We prioritise transparency, consistency, and a deep understanding of market dynamics. Quantum Mutual Fund is a reliable partner in their wealth creation journey.

Quantum Fundamentals

Our approach to investments is built with a focus on – People, Philosophy, Process, and Predictability of Outcomes. These aren't just buzzwords; they're the cornerstones that could help you decide where to place your trust. Through our journey, we've always put our thoughtful investors, first and strived to improve the ecosystem for investing.

People

What is the background?
What is the experience?

Philosophy

Is there a clearly defined investment philosophy across all market situations or is this an opportunistic collect AUM and ride-the-wave, "sell-what-is-hot" manager?

Process

What is the research and investment process and how reliable is it?

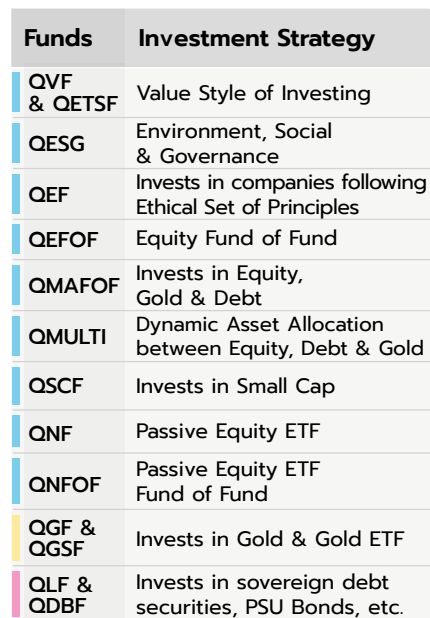

Predictability of Performance

Given the process, is the performance as predictable as it should be?

With Quantum, Predictability of Outcomes in our investments processes are within your reach. Our Unique Estimated Upside Potential chart, diligently estimated every month since April 2006, is a testament to aligning past estimations with the present figures. The Quantum Value Fund's track record is an indicator of the fund's upside potential with a reasonable degree of certainty.

Quantum Mutual Fund is known for its simple and thoughtful approach towards investing. We provide a carefully curated range of 14 funds tailored to suit diverse investor needs. In the interest of doing what's best for our investors, Quantum has been meticulously adding funds over the years across the asset classes of Equity, Debt and Gold to create a one stop shop for all your needs.

Christy Mathai Fund Manager, Equity

May 2025 witnessed a broad-based recovery across indices with BSE Sensex gaining by 1.7%. The BSE mid and small cap indices rose sharply gaining 5.4% & 10.6% respectively in the month of May 2025. The equity markets for the month were driven by the US-China agreeing for tariff reductions and easing of geopolitical tension in India. The earning season continues to be muted with consensus earnings for FY26/27 further downgraded. The current estimate for Nifty 50 earnings in our view, now looks more reasonable at 10.6% and 10.9% for FY26/27.

The flows into equities remained resilient with strong DII (Domestic Institutional Investors) participation. Most of the emerging markets saw an uptick in FPI (Foreign Portfolio Investors) flows after a period of sharp outflows in the past few months and India also was no different garnering its fair share of flows during the month.

Table 1: Institutional Flows

In USD Mn	CY2024	CYTD 2025	May-25
FPI (Foreign Portfolio Investors) Flows	124	-11,376	2,344
Mutual Fund Flows	51,355	21,240	5,514
DII (Domestic Institutional Investors) Flows (Including MF Flows)	62,346	31,932	6,618

Source: NSDL, SEBI, Data as of May 31, 2025

As shown in the table below (Refer Table 2), most of the sectors did well during the month, with sharp rebounds in capital goods, realty, and metals. Some of these sectors have seen a sharp decline in the past few months; however, with the government capex picking up, these sectors have performed well. Banks, FMCG and consumer durables were the laggards during the month.

Table 2: Performance of Major Indices during the Month

Major Indices	1 Month	1 Year	3 Year
BSE Sensex	1.70%	11.40%	52.10%
BSE 500	3.50%	8.60%	65.10%

Source: Bloomberg, Data as of May 31, 2025

Past performance may or may not be sustained in the future.

Aggregate revenue growth continued to be soft for the March-2025 quarter. PAT (Profit After Tax) growth was driven by margin expansion due to softening input prices and price hikes. Some of the sectors such as telecom, utilities, OMC (oil marketing companies), pharma witnessed improvement in margins.

On a full year basis, the Revenue and PAT growth remain modest. Aggregate revenue and earnings growth for companies which have disclosed their Q4 FY25 and FY2025 results and are a part of the BSE 500 Index, are indicated in the below graph (Refer Graph 1 and 2).

Graph 1: Aggregate Revenue and Profit Growth in Q4 FY25 and FY2025 for BSE 500 companies

Source: Ace Equity; Data as of May 2025

Graph 2: Trend of Corporate Profitability for Listed Universe (% YOY)

Source: CMIE; Data as of May 2025; Net Sales and PBIDT (Profit Before Interest, Depreciation and Taxes) growth is considered.

While we remain focused on the long-term trends, it is important to note the current trends. Key sectoral highlights from the recent quarterly results are:

- Credit growth has moderated for majority of the banks driven by deposit mobilization challenges and regulatory headwinds. Asset quality barring few pockets continues to remain benign. Banks have cut down the deposit rates across tenures to defend margins in a declining interest rate environment. We expect credit growth to pick up as we progress through FY26.

- Consumer staples continue to report muted volumes amidst the ongoing urban slowdown. Margins were under pressure due to raw material headwinds. Valuation continues to remain expensive in these pockets.
- Auto names saw modest increase in volumes; sub-segments such as tractors and commercial vehicles witnessed better traction. Some of the holdings in our portfolio, especially of the two wheelers' segment, saw margin improvement driven by better product mix and pricing actions.
- The demand environment has seen improvement for cement companies driven by government capex. With benign input cost and improvement in pricing environment, cement companies are witnessing an improvement in profitability.
- In the capital goods space the topline growth has clearly moderated. Order inflows across players remains flat. Barring few companies, margins are coming off for most capital good names. Over the long term, we expect competitive intensity to increase and margin to moderate from current levels.
- IT companies have guided for muted growth amid a deferment in discretionary spends arising from uncertainty around the U.S. government policies.
- Real Estate companies have reported moderate growth in pre-sales and collections on a high base. Overall inventory across the country remains at manageable levels.

From a macro standpoint, CPI (Consumer Price Index) inflation has moderated further from 3.3% in March 2025 to 3.2% in April 2025, paving way for more rate cuts. Q4 FY25 Real GDP growth saw an acceleration at 7.4% and the GVA (Gross Value Added) growth stood at 6.8%. Government capex has picked up in the recent past while private consumption remains muted. The following tables (Tables 3 to 8) show the growth indicators of key frontline sectors. IT Services Annual Contract Value (ACV) remains flat, indicating a subdued hiring environment.

While the near-term economic trend is gradually recovering; valuations appear reasonable in pockets within the large cap space (Refer Table 9 and Graph 4). Benign inflation across food and fuel segments could keep inflation contained in the medium term. The ongoing interest rate cuts and potential consumption boost from recent income tax cuts augurs well for the economy over the medium term. While current valuation levels may not offer potential for super normal returns, risk reward appears reasonable in the large cap space. Investors may consider fortifying their large cap allocations to equity in a staggered manner.

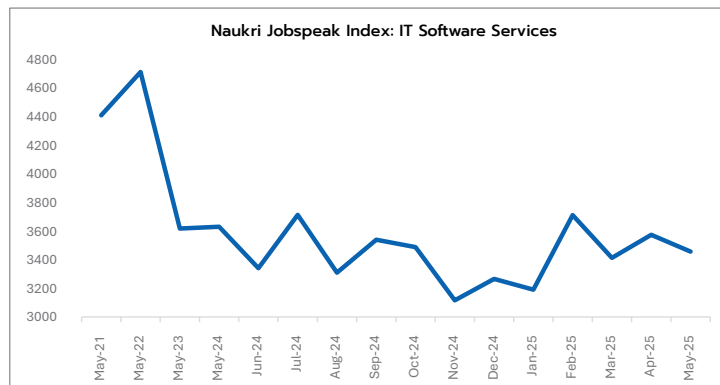

Table 9: Current Valuation Vs Historic Median of major indices

			10y Median

Scheme wise Fund Managers Commentary

Scheme	Portfolio Commentary	Portfolio Positioning
Quantum Value Fund*	<ul style="list-style-type: none"> During the month, we trimmed our exposure to a telecom company, where valuation exceeded our fair value estimates. We added weight to an auto ancillary name, which we believe should benefit from volume recovery in after sales market, post strong auto cycle from 2022-25. Having limited exposure to Industrials, where we find valuation expensive hurt our performance during the month. Other laggards where Healthcare and cash in the portfolio. Performance was broadly supported by Consumer Discretionary and Materials (Steel and Cement) sectors. 	<ul style="list-style-type: none"> Portfolio will focus on names where valuation is at a discount to our fair value estimate. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. This could give a large cap tilt to the portfolio. Current portfolio is overweight on Financials, IT and select consumer discretionary companies where valuation appear reasonable.
Quantum ELSS Tax Saver Fund	<ul style="list-style-type: none"> During the month, we trimmed our exposure to a telecom company, where valuation exceeded our fair value estimates. We added weight to an auto ancillary name, which we believe should benefit from volume recovery in after sales market, post strong auto cycle from 2022-25. Having limited exposure to Industrials, where we find valuation expensive hurt our performance during the month. Other laggards where Healthcare and cash in the portfolio. Performance was broadly supported by Consumer Discretionary and Materials (Steel and Cement) sectors. 	<ul style="list-style-type: none"> Portfolio will focus on names where valuation is at a discount to our fair value estimate. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. This could give a large cap tilt to the portfolio. Current portfolio is overweight on Financials, IT and select consumer discretionary companies where valuation appear reasonable.
Quantum ESG Best In Class Strategy Fund	<ul style="list-style-type: none"> We exited a Consumer Discretionary stock and trimmed our allocations in a private bank where there has been a changed view of either the quality, integrity or financial position of the stocks we held. We outperformed our benchmark during the month. The performance was majorly contributed by Materials sector largely driven by the rally in the Chemicals segment, where we were overallocated versus benchmark and our stocks posted good returns. The overweight position in Consumer Discretionary also aided performance. 	<ul style="list-style-type: none"> Portfolio will focus on companies with good quality, high integrity and robust financials. Thrust on portfolio liquidity and governance should help us during volatile markets. Amid stable inflation and growth aided by an accommodative environment, sectors like Consumer Discretionary, Finance, and Technology are poised for likely upbeat performance. The recent Repo rate cut by RBI will be a positive stimulus for consumption segment where we are overweight versus benchmark. The global policy uncertainty may augur well for our portfolio which is biased towards high-quality investments. A diversified portfolio emphasizing integrity principles, particularly in these robust sectors, is strategically positioned to leverage India's growth dynamics. Investors should remain vigilant, monitoring key indicators and global trends, while maintaining a focus on sustainability and corporate integrity to optimize in this evolving landscape.
Quantum Ethical Fund	<ul style="list-style-type: none"> We continue to evolve our portfolio to include Ethically complaint companies with high integrity and strong financials. We added position in Materials and Consumer Discretionary. We outperformed our benchmark during the month. The performance was largely contributed by our stock allocation in the Materials and Consumer Discretionary sector. 	<ul style="list-style-type: none"> Portfolio will focus on companies with Ethical compliance, high integrity and robust financials. Thrust on portfolio liquidity and governance should help us during volatile markets. We will continue to build our portfolio maintaining Ethical compliance and select companies that are highly liquid across market caps, with high integrity and strong financials. Amid stable inflation and growth aided by an accommodative environment, sectors like Consumer Discretionary, Technology and Industrials are poised to benefit from domestic recovery and any respite from global uncertainty. The recent Repo rate cut by RBI will be a positive stimulus for consumption segment where we are overweight versus benchmark. A diversified portfolio emphasizing integrity principles, particularly in these robust sectors, is strategically positioned to leverage India's growth dynamics.
Quantum Small Cap Fund	<ul style="list-style-type: none"> During the month, we added weight to one auto ancillary company, where valuation looked attractive. Having exposure to auto-ancillary companies, consumer oriented and some industrial companies helped the performance for the month while BFSI and IT remained drag on overall performance. 	<ul style="list-style-type: none"> Portfolio screening focuses on growing companies with reasonable valuations. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. Current portfolio is overweight on Financials and auto names.

Sneha Pandey

Fund Manager, Fixed Income

Key highlights of the month:

1. RBI showers center with record Rs 2.68 trillion dividends
2. Liquidity Lifeline: RBI Pumps Rs 1.25 trillion into Markets via OMOs
3. Inflation Cools Off! Headline CPI Dips to 3.16% YoY for April 2025
4. Border Blaze: India-Pakistan Skirmish Rattles South Asian Sentiment
5. Tariff Timeout! US-China Declare 90-Day Trade War Truce
6. US-UK Economic Accord Eases Global Market Concerns
7. India GDP surprise on the upside

Chart I: Tracking India's 10-Year Bond Yields Against Major Global Economies

Source: Bloomberg. Data up to May 30, 2025

Key Highlights that had an impact on bond yields:

United States: U.S. Treasury yields rose sharply, with the 10-year crossing 4.59% due to hawkish Fed signals and fiscal concerns. **The Fed held rates steady at 4.25%-4.50%**, pausing hikes amid easing inflation but sticky core prices and trade tensions.

India: RBI cut rates three times, including a surprise 50 bps cut in May 2025, (now totaling a 100-bps rate cut this calendar year); **reduced the CRR (Cash Reserve Ratio) to boost liquidity** and shifted its stance from 'accommodative' to 'neutral'. Continuing its liquidity support, RBI conducted ₹25,000 crore in bond buybacks, helping keep India's 10-year yields stable around the 6.25% range.

Japan: The Bank of Japan kept rates steady, cut growth forecasts due to U.S. tariff risks, but expects inflation to stay near 2% through 2028.

The month of May was marked by **heightened geopolitical tension** between India and Pakistan. India conducted retaliatory strikes targeting terrorist camps in Pakistan, following a major provocation. **The conflict briefly escalated cross-border tensions**, leading to market uncertainty, a temporary spike in oil prices, and increased demand for safe-haven assets like the US dollar and gold. However, **diplomatic backchannels helped prevent further escalation**, and markets soon regained footing.

On the global front, there were signs of relief in the long-standing trade dispute between the United States and China. Both countries agreed to a **90-day pause** in the implementation of new tariffs; offering a much-needed breather to global trade flows and supply chains.

This move boosted investor sentiment globally and helped stabilize equity and commodity markets. In parallel, the **USA and the UK struck a bilateral trade deal**, aimed at ensuring smoother post-Brexit commerce. This contributed to a more constructive global risk environment during the latter half of the month.

Chart II: Fed on Hold, Bond Yields Climb: Inflation lower but core inflation remains sticky in the US

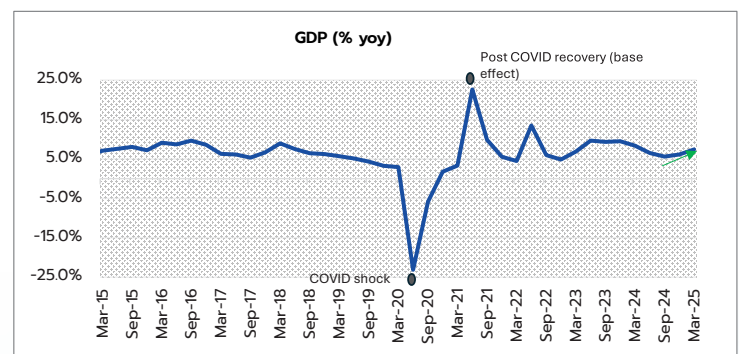

Source: Bloomberg. Above data is for the month ended May 2025, April 2025 (1 month ago) and November 2024 (6 months ago).

In May 2025, the U.S. Fed held rates steady at 4.25%-4.50% for the third time, maintaining a cautious stance. **Headline inflation eased to 2.3%, but sticky core inflation at 2.9% kept the Fed vigilant.** New tariffs and strong jobs data pushed rate cut expectations to late summer, as the Fed balances growth support with inflation risks still above its 2% target.

On the domestic front, India saw strong macro signals in May 2025. The RBI infused ₹1.25 lakh crore via Open Market Operations (OMOs) to maintain ample liquidity and support credit growth. It also declared a record high dividend of ₹2.68 lakh crore to the government, offering a major fiscal boost.

Adding to the positive momentum, India's Q4 FY25 GDP growth came in at 7.4% YoY (well above broader market expectations). **India's GDP grew by 7.4% YoY in Q4 FY25**, exceeding expectations due to strong government capex and lower subsidy payouts. **GVA (Gross Value Added) growth also improved to 6.8% YoY**, led by agriculture and construction. Agriculture output rose sharply, supported by higher foodgrain production and favorable monsoon forecasts.

Chart III: India's Economic Resilience Shines Through in Q4 GDP Recovery

Source: Bloomberg. Above data is for the month ended May 2025, April 2025 (1 month ago) and November 2024 (6 months ago).

While private consumption slowed to 6% YoY, especially in urban areas, investment picked up pace. Gross Fixed Capital Formation rose 9.4% YoY, driven by year-end government infrastructure push. Government consumption fell due to reduced subsidies, while imports contracted significantly, adding to net growth.

Looking ahead, we expect the FY26 growth to be close to 6.5% (RBI's growth estimate for FY 26), supported by rural demand, tax relief for urban consumers, low inflation, falling oil prices, and monetary easing by the RBI. While Q4FY25 had some one-off boosts, underlying momentum is expected to stay intact.

Following the release of strong FY25 GDP data (6.5%), the **10-year benchmark yield rose 4 basis points to 6.29%**, as traders scaled back expectations of deep rate cuts. Markets now see **terminal policy rates settling higher, around 5.50%-5.75%**.

Indian bond yields have steadily declined in recent months, even as U.S. yields remained elevated and volatile. Since December 2024, this divergence has reflected contrasting policy paths - an **accommodative RBI versus a cautious Fed**.

In May 2025, U.S. 10-year Treasury yields rose from 4.16% to 4.40%, while India's 10-year G-sec yield fell by 7 bps to 6.28%, staying in a tight range. The yield spread narrowed to under 200 bps—far below the 20-year average of 450+ bps. Despite geopolitical tensions, Indian yields continue to soften, driven by easing inflation, pro-growth policy, and improving fiscal dynamics.

Chart IV: Indian Government bond yield curve has steepened; shorter end reacts to liquidity boost and rate cut expectations

Source: Bloomberg. Above data is for the month ended May 2025, April 2025 (1 month ago) and November 2024 (6 months ago).

Money market yields in India too softened on the back of liquidity support by the RBI. **T-bill rates** for the 3-month segment plunged post easing in liquidity conditions. Meanwhile, the 3-month **AAA PSU CP/CD rates** too moved in tandem to the 6.2%- 6.4% range against the 6.5% - 6.7% band on closing basis.

Chart V: Money Market Rates eased on the back of liquidity flux; Corporate bond yields too softened across the curve

Source: Bloomberg. Above data is for the month ended May 2025, April 2025 (1 month ago) and November 2024 (6 months ago). Data on corporate bond yields is for AAA PSU corporate bonds.

The **corporate bond yield curve** has also steepened, with the spread between 10-year corporate bonds and 10-year G-Secs narrowing to around 63 basis points by the end of May 2025. Despite this, demand for corporate bonds remains robust, matched by steady supply. Corporate bond issuances for FY2025 have reached Rs 8.9 trillion, slightly up from Rs 8.6 trillion in FY2024.

Liquidity management has been focused on enhancing transmission of the rate cuts with RBI infusing substantial durable liquidity since December 2024. Infusion has been made via CRR cut, OMO purchase, USD INR buy-sell swaps and buy-backs.

Banking system liquidity eased in May 2025 despite seasonal pressures, GST, excise collections, and currency demand. The RBI offset these challenges with significant OMO purchases, pushing core liquidity into surplus. The average daily liquidity stood at Rs 17 trillion in surplus for the month of April 2025 (~ 1% of Net Demand and Time Liabilities (NDTL)) against a surplus of Rs 13 trillion on an average for the month of April 2025.

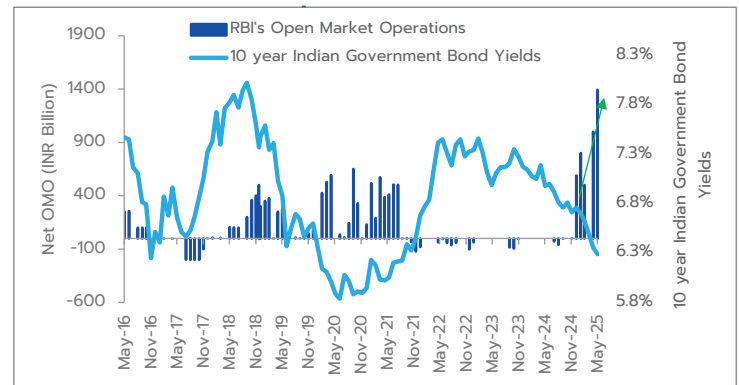

Chart VI: Banking system liquidity in surplus; Core liquidity too in a surplus ~ 14% of NDTL

Source: RBI. Data up to the week ended May 30, 2025

To facilitate smooth transmission of rate cuts, the RBI actively managed liquidity through a **Rs 1 trillion OMO purchase program** for April 2025 alone and Rs 1.4 trillion in May 2025 as well. Since January 2025, **total OMO purchases have reached Rs 4.2 trillion**. As a result, **core liquidity surged into a surplus of ~ Rs 5 trillion** in May 2025 against Rs 1.1 trillion by March 21, 2025.

Chart VII: RBI's Active Liquidity Management: OMO Purchases Touch Rs 3.8 trillion in CY2025

Source: RBI and Bloomberg. Data up to the period ended May 30, 2025

Liquidity conditions may continue to be supportive in the coming months, as we expect the RBI to remain proactive in managing liquidity. Early May 2025 saw strong spending, following past trends, and was further supported by a large RBI dividend of Rs 2.68 trillion, over and above the OMO.

This should ensure ample liquidity in the first half of the year. However, currency demand and seasonal changes in government balances could lead to tighter conditions in the second half.

India's retail inflation - Consumer Price Index (CPI) dropped to 3.16% year-on-year in April 2025. This is the lowest level seen since July 2019. The main reason for this decline was a continued fall in food prices, especially vegetables, which have become cheaper for three months in a row.

Core inflation, which excludes food and fuel prices, stayed steady at 4.1% year-on-year. One of the reasons core inflation didn't fall further is the high price of gold. Rising gold prices pushed up the cost of personal care items, keeping overall core inflation slightly elevated.

Looking ahead, both Skymet and the India Meteorological Department (IMD) are predicting a normal monsoon this year. A normal monsoon forecast supports a positive inflation outlook, though short-term vegetable price spikes remain a risk. With falling crude prices and muted demand, FY26 retail inflation is expected to average around 3.7%.

Chart VII: RBI's Growth-Friendly Stance Gets Backing from Softer Inflation

Source: RBI, MOSPI. Data for Inflation is for the month ended April 2025. Data on Repo Rate is up to June 06, 2025.

RBI's Bold Third Rate Cut Signals Limited Room Ahead

The Reserve Bank of India (RBI) surprised markets by **cutting the policy repo rate by 50 basis points (bps)**, double the expected 25 bps, marking its third consecutive rate cut in this easing cycle. This aggressive move aims to support growth amid global uncertainty and weak domestic demand.

Alongside, **RBI announced a phased 100 bps cut in the Cash Reserve Ratio**, releasing about Rs 2.5 trillion liquidity into the banking system. Together, these steps represent RBI's strongest easing push in recent times.

However, the RBI also shifted its policy stance from "accommodative" to "neutral," signaling that the scope for further rate cuts is limited. Governor Sanjay Malhotra indicated the central bank will watch how these measures transmit through the economy before making more moves.

The RBI maintained its FY26 GDP growth forecast at 6.5% and lowered its inflation outlook to 3.7%, providing the confidence to act decisively now. The focus now shifts to banks to pass on the benefits and boost credit and investment, while fiscal policy and reforms play a bigger role going forward.

The Indian Rupee (INR) depreciated by around 1.3% against the US Dollar, ending the month at 85.58 from 84.49. This weakness occurred despite a nearly 1% decline in the Dollar Index (DXY), indicating that domestic factors likely drove the rupee's underperformance.

Chart VIII: Rupee weakened against USD; Brent Crude Hits Lows Amid Supply Surge & Demand Fears

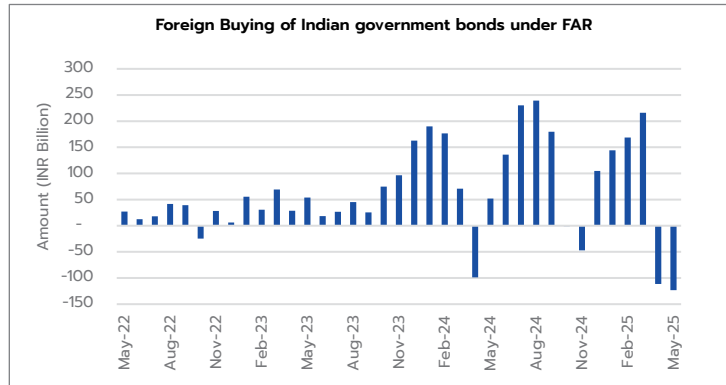

Source: Bloomberg. Data up to the month ended May 2025.

Brent crude fell below \$60 in early April 2025 as rising global supply—driven by OPEC+ ramping up output—clashed with fears of weaker demand amid growing recession risks and escalating U.S. tariffs under Trump. However, by May 2025, prices recovered to the \$63–\$66 range as trade tensions, particularly between the U.S. and China, began to ease, restoring some market confidence.

Foreign investments in IGBs (Indian Government Bonds) saw notable growth in March 2025 alone, with the Fully Accessible Route (FAR) segment receiving an influx of Rs 227 billion during the month alone. However, Foreign investors sold and exited Indian bond markets in April 2025 largely due to a combination of global and domestic factors that raised caution. The trend continued in May 2025 as well.

Geopolitical tensions, particularly between India and Pakistan, escalated after the Pahalgam attack. This increased risk perception among foreign investors. **U.S. trade tensions and tariffs under President Trump created volatility in global markets, prompting a flight to safety (e.g. U.S. Treasuries).**

Chart X: Global Jitters & Geopolitical Tensions Trigger Foreign Exit from Indian Bonds

Source: CCIL (Clearing Corporation of India) Data up to the month ended May 2025

In the medium term, global financial markets are expected to experience reduced volatility. The USD is likely to stabilize within its current range, potentially leading to a reversal of the safe-haven trade, which may result in increased capital flows into Emerging Markets (EMs) like India.

Outlook

In April 2025, the RBI cut the repo rate by 25 bps to 6% and turned accommodative to support growth. In its June 2025 policy, the RBI slashed the repo rates by another 50 bps to 5.5%, signaling urgency in frontloading support amid global uncertainty and domestic demand softness. This marks the third straight cut in the current cycle.

Alongside, the RBI announced a phased 100 bps CRR cut, expected to inject ₹25 trillion into the banking system, enhancing liquidity support.

However, the stance reverted from "accommodative" to "neutral," suggesting limited room for further easing. Governor Malhotra signaled a pause, preferring to assess the impact before more action.

GDP growth for FY26 remains unchanged at 6.5%, while inflation projections were cut to 3.7%.

With borrowing costs down and liquidity rising, the focus now shifts to transmission and credit pick-up. Fiscal support and structural reforms will also need to play a stronger role.

From a bond market perspective, this was a stronger-than-expected move. But with the policy stance now neutral, we believe the terminal rate has likely been reached. A final 25 bps cut may still be possible depending on inflation, growth slowdown and real rates.

We expect the yield curve to steepen some more and then remain rangebound in the near term. Global risks, U.S. tariffs, recession fears, and geopolitical tensions, may cap further yield gains.

Despite short-term volatility, we maintain a positive medium-term view on bonds supported by:

- Declining net supply of government bonds
- Steady demand from long-term domestic investors
- India's inclusion in global bond indices
- Scope for more RBI OMOs

Given limited room for deeper rate cuts, we are gradually reducing portfolio duration, shifting towards shorter-term bonds to manage downside risks in a flattish curve environment.

What can investors do?

Given the above factors, we expect the bond yields to go down (prices to go up). In this declining interest rate environment, investors with medium to long investment horizon, can consider dynamic bond funds. These funds can allocate to long-duration bonds while keeping flexibility to adjust portfolio position if market conditions change. This adaptability allows investors to remain invested for a longer period.

For investors with shorter investment horizons and a low risk tolerance, liquid funds remain the more suitable option.

Source: Reserve Bank of India (RBI), Ministry of Statistics & Program Implementation (MOSPI), Bloomberg

Chirag Mehta Chief Investment Officer

After four consecutive months of positive returns, Gold experienced a slowdown in May, though remaining relatively flat from April closing. The month was marked by significant geopolitical developments, including escalation between India and Pakistan, a mutual (but economically forced) agreement between the United States and China to lower tariffs, potential ceasefire discussions between Russia and Ukraine, and growing tensions in the Israel-Iran situation, all adding to global volatility. Despite the myriad of positive and negative influences stemming from these events, their effects appeared to be neutralized, resulting in gold broadly maintaining its levels. The dollar demonstrated a strong performance, and the yields were up to 4.4% from 4.1% at the end of April. Despite this, gold appeared more resilient.

Following the imposition of tariffs as high as 145% on imports from China, the United States adopted a more conciliatory approach by engaging in bilateral discussions with Chinese officials. Ultimately, a mutual

agreement was reached whereby the United States would reduce its tariffs from 145% to 30%, while China would lower its tariffs from 125% to 10%. After the official announcement of these developments, the price of gold experienced a decline, falling by approximately 2% on the same day. In remarks to the press, President Trump indicated that, since some tariffs have been suspended rather than eliminated, there remains a possibility that they could be reinstated in three months if no further progress is achieved.

In the final week of May, the International Court of Trade ruled that the tariffs imposed by the Trump Administration were unlawful, subsequently nullifying their implications. In response, the Trump Administration filed a notice of appeal, indicating that the matter could escalate to the Supreme Court. The repercussions of this ruling extended beyond the Trump Administration, as the impact was also felt in the gold market. Post ruling, the price of gold experienced a decline of approximately 1%. The tariff situation continues to be extremely fluid and the uncertainty continues to loom large. A court ruled many Trump tariffs illegal, but an appeal allows them to remain in place for now. The broader issue is the government's power to define "emergencies".

Additionally, the minutes from the Federal Open Market Committee (FOMC) meeting served as a catalyst for market movements, as they conveyed positive sentiments regarding the current state of the economy. Recent economic data for April 2025 has challenged earlier concerns about rising inflation and slowing growth following the tariffs imposed by the Trump administration. Contrary to widespread expectations, the annual inflation rate in the United States declined to 2.3% in April, the lowest since February 2021, slipping from 2.4% in March and falling short of the predicted 2.4%. The 90-day pause on tariffs provided some relief, helping to mitigate abrupt economic impacts. Additionally, the U.S. Bureau of Labor Statistics reported an increase of 177,000 in total nonfarm payroll employment for April, with the unemployment rate holding steady at 4.2%. These figures collectively point to a stronger economic performance than anticipated despite tariff-related concerns. Following the release of this data, gold prices retreated from earlier gains, reflecting a market adjustment to these positive economic indicators and a reassessment of the initial fears surrounding economic deterioration. Additionally, the Consumer Confidence Index rose to 98 in May, well above economists' consensus forecast for an 87, the Conference Board reported. However, we can't rule out the possibility of forward trading ahead of the Tariffs deadline leading to lower impact in the near term.

The Federal Reserve continues to uphold a cautious approach regarding interest rate adjustments this year. In the FOMC meeting held during the second week of May, the Fed opted not to implement any rate cuts, choosing instead to observe the actual impacts of economic data rather than responding to speculative views. Fed Chair Jerome Powell addressed the press, stating, "Despite heightened uncertainty, the economy is still in a solid position. The unemployment rate remains low, and the labour market is at or near maximum employment. Inflation has come down a great deal but has been running somewhat above our 2 percent longer-run objective."

Outlook

The price of gold corrected close to 9% from the peak levels seen in April to hit a recent low of \$3178. Given the unfolding situation on tariffs and geopolitical developments, there was a fair chance of unwinding some of premium from gold price to extend the correction. However, with Trump at the helm, it was a calm before the storm. Trump with its reinvigorated tariffs on Aluminum and Steel and challenging courts verdict on Tariffs legality is making his intentions clear. Also, the renewed escalations on geopolitics with Russia – Ukraine, Israel Hamas is further bringing bids to gold, one can't rule out further gains in gold prices.

Apart from the policy uncertainty in the US, the fundamental problem of rising deficits and unsustainable debt remains unresolved or rather amplified with Trump's "one big beautiful bill" which could add trillions of dollars to already burgeoning debt. This structural issue is the cornerstone of eroding confidence in the US economy and will lead to money fleeing US shores leading to a declining US dollar.

Although the Federal Reserve has adopted a stance of fewer rate cuts while monitoring economic changes, the possibility of a rate cut in the upcoming June meeting cannot be entirely dismissed. The Fed has indicated the potential for two rate cuts this year, one of which may be announced in June to ensure alignment with their goal of achieving 2% inflation and tackle increasing debt burden. The growing burden of national debt has been a pressing issue for the United States for some time. As of now, the debt stands at \$36 trillion. Should a rate cut be announced by Chair Powell, it would likely serve as a tailwind for gold, resulting in an upward movement in prices.

As we have previously highlighted, central banks have been actively purchasing gold, and this trend persisted in the first quarter of 2025. Total gold demand, increased by 1% year-on-year to reach 1,206 tons, the highest level for a first quarter since 2016. During this period, central banks acquired 244 tons of gold, which, while representing a slowdown from the previous quarter, remains comfortably within the quarterly range observed over the last three years. Buying slowed down further to 12 tonnes in the month of April probably on account of the run away increases in prices and the heightened volatility amidst the tariff disruptions and geopolitical uncertainty. However, we maintain our view that central banks will continue to enhance their gold reserves to reduce their reliance on dollar due to policy uncertainty from the United States. This ongoing demand for gold is likely to help sustain price levels in the market.

The appreciation in gold prices through early 2025 reflects underlying economic shifts rather than fleeting speculation. Nevertheless, market fluctuations are inevitable, and price volatility should be expected as geopolitical and economic developments unfold. If trade tensions easing and global stability gradually improving, gold may undergo short-term corrections. Savvy investors should view these fluctuations as entry points to gradually build their gold positions, positioning themselves for long-term resilience amid ongoing uncertainty.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Value Fund - Direct Plan and Regular Plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz 1 year, 3 years, 5 years, 7 years, 10 years and since inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. ##As TRI data is not available since inception of the scheme, Tier II benchmark performance is calculated using composite CAGR BSE 200 index PRI Value from March 13, 2006 to July 31, 2006 and TRI Value since August 1, 2006.

Returns are net of total expenses

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Multi Asset Allocation Fund - Direct Plan and Regular Plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses.

#NIFTY100 ESG TRI, ##BSE Sensex TRI

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum ESG Best In Class Strategy Fund - Direct Plan and Regular Plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP.

Returns are net of total expenses

*XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Gold Savings Fund - Direct Plan and Regular Plan - Growth option. Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses; #Domestic Price of Gold, ##CRISIL 10 Year Gilt Index.

QUANTUM MULTI ASSET FUND OF FUNDS

An Open Ended Fund of Funds Scheme Investing in schemes of Quantum Mutual Fund

Fund Details (as on May 31, 2025)

Category of Scheme Fund of Funds – Domestic

Investment Objective

The investment objective of the Scheme is to generate modest capital appreciation while trying to reduce risk (by diversifying risks across asset classes) from a combined portfolio of equity, debt / money markets and Gold schemes of Quantum Mutual Fund. The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise/ that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. There can be no assurance that the investment objective of the Scheme will be realized.

QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Fund Details (as on May 31, 2025)

Category of Scheme Exchange Traded Fund

Investment Objective

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve returns equivalent to the Nifty by "passive" investment. The scheme will be managed by replicating the Index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, management expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.

Fund at a Glance

Scheme Name	Quantum Gold Fund	Quantum Nifty 50 ETF
Type of Scheme	An Open Ended Scheme Replicating/Tracking Gold	An Open Ended Scheme Replicating /Tracking Nifty 50 Index
Inception Date	February 22, 2008	July 10, 2008
Investment Objective	The Investment Objective of the Scheme is to generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold. There is no assurance that the Investment Objective of the Scheme will be achieved.	The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.	Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
Application Amount for Fresh Subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.	Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Minimum Additional Amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.	Beta	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
Yield to Maturity	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.	AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.	Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.	Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub categories.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE 200, BSE 500, 10-Year Gsec.	Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
Portfolio Turnover Ratio	Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.		
Tracking Error	It is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better.		
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield
