A Changing World Order. Shifting Growth Engines. India's Turn?

Across the twentieth century, leadership in global trade shifted from the long-held dominance of Western Europe and North America to the rise of Asia, led by China. This transition was driven by waves of globalization, the opening of economies, rapid technological transformation, and supportive policy frameworks—collectively making global trade a central pillar of the world economy. Today, exports and imports account for more than 50% of global GDP, a sharp increase from roughly 10% prior to the 19th century. One of the defining economic developments of the past century has been the integration of national economies into a global system. While India has participated in this transformation, its imprint on global merchandise trade remains limited. With an improving ecosystem, supportive policy measures, and a strong resource base, India may once again have a window of opportunity to capitalise on the evolving global order, particularly the China+1 shift. In this context, we examine sectors such as data centres, Contract Research Development and Manufacturing Organisation (CRDMOs) and global capability centres (GCCs), which are likely to be key beneficiaries of the changing landscape.

Source: World Trade Organization (WTO). Data as on 2024

Tracing the roots

Early 20th Century Dominance

From the early 1900s to the 1930s, Europe—spearheaded by the UK, Germany, and France—commanded the majority of global exports, typically holding 56-62% of the world total, while advanced economies (including the US) accounted for around 60%. This dominance was fuelled by vast colonial trade networks and inter-industry exchanges.

Post-WW II Recovery

Following World War II, the United States leveraged its unmatched industrial strength to lead global trade, accounting for around 35% of exports among the top ten industrial nations as late as 1952. This dominance underpinned a U.S.-led push toward multilateralism, exemplified by the establishment of the General Agreement on Tariffs and Trade (GATT).

Japan, meanwhile, emerged as a global trade powerhouse in the 1970s and 1980s, propelled by its post-war economic transformation. Rising from a war-torn economy, it became one of the world's leading exporters and, by the late 1960s, the second-largest economy globally.

Rise of Asia and Global South

The shift in global trade power since the 1980s has been marked by the ascent of Asia, which has transformed into the world's primary trading region. While Asia's share of global exports climbed from approximately 16% in the early 1980s to 33% by recent years, developing economies as a broader group reached a 44% share of global exports by 2023.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

A Changing World Order. Shifting Growth Engines. India's Turn?

China's Export Dominance

China has cemented its status as the world's top exporter, with total exports reaching approximately \$3.58 trillion in 2024. This surge stems from a diversified mix of high-value goods: electrical machinery (26% of exports), standard machinery and computers (15.9%), and a fast-expanding automotive sector (6%). Its rise as the "world's factory"—a global manufacturing juggernaut—owes much to deliberate government industrial policies, enormous infrastructure investments, and a tightly knit supply chain ecosystem.

Source: World Trade Organization (WTO). Data as on 2023

This strategic shift not only solidified the region's role as a global manufacturing hub but also enabled developing nations to capture larger shares of value-added production within global trade networks.

Top 10 exporting countries and top 10 importing countries chart

Source: World Trade Organization (WTO). Data as on 2024

India's positioning in global trade

While China established itself as the global leader in the trade of physical goods, India secured its own strategic position as a world-class powerhouse for services exports. This sector has become a vital cornerstone of India's economic growth, with services exports more than doubling over the last decade to reach a record US\$ 387.5 billion in FY 2024-25.

However, India's lag in global trade transition to Asian countries is attributed to decades of inward-looking policies and systemic structural challenges. The following chart shows that India's GDP is largely driven by domestic consumption (57% of GDP) and has less dependence on exports (17% of GDP).

India's GDP Break up

A Changing World Order. Shifting Growth Engines. India's Turn?

To strengthen its global trade position and capitalize on the "China+1" strategy, India has pivoted its manufacturing exports from raw materials toward high-value, sophisticated sectors. This transition has been significantly accelerated by targeted government initiatives, most notably the Production Linked Incentive (PLI) scheme, which is designed to enhance domestic production capabilities, improve import substitution and foster deeper integration into global value chains.

We hereby articulate few sectors which are better placed to take advantage of India's export ambitions and import substitution:

1. India's Data Center Frontier

India is currently witnessing an unprecedented surge in data center capacity, rapidly evolving into a critical digital backbone for its trillion-dollar digital economy. **India produces 20% of the world's data, but hosts only 3% of the world's data centres.** The sector is likely to see massive investment from global hyperscalers as the cost of setting up data center is 30-40% lower than developed countries.

Hyperscale data centers are massive, purpose-built facilities designed to handle extremely large-scale computing and storage needs while **Co-location** offers an alternative where a business rents space, power, and bandwidth in an existing hyperscale facility owned by a provider.

As of mid-2025, the industry's total inventory reached 1,123 MW of IT load capacity, marking a pivotal transition from small enterprise-owned server rooms to large-scale, strategic infrastructure. This growth is projected to continue at a robust CAGR of approximately 15.8% to 16.34% through the early 2030s. (Source: Cushman & Wakefield)

Growth Drivers

The rapid buildout is fueled by a confluence of demand-side and regulatory factors that potentially attempt to position India as an attractive global investment destination:

- **Digital Transformation:** The world's largest mobile user base, coupled with the nationwide roll-out of 5G, has created an insatiable demand for data processing and storage.

Current Data Center Capacity and planned addition (MW)

Source: Cushman & Wakefield

New DC capacity over the next 5 years	5,452 MW
Cost of capex per MW	404 Mn Inr/4.6 Mn USD
Total capex of Data Centre	25 Bn USD/ 2.2 Tn Inr

- **AI and Cloud Boom:** AI integration across finance, public services, and beyond is fueling demand for high-density, AI-optimized data centers.
- **Data Sovereignty Push:** Mandates for local data storage are forcing domestic and global cloud providers to invest heavily in in-country infrastructure.
- **Robust Policy Backing:** Initiatives like the India AI Mission and "infrastructure status" for data centers enable easier financing, subsidies, and regulatory approvals.

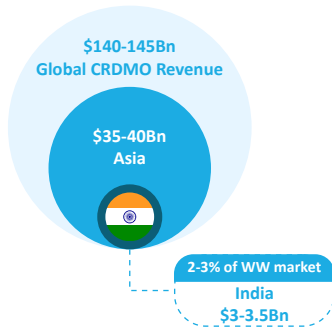

2. From cost-efficiency to Innovation: India's CRDMO (Contract Research, Development, and Manufacturing Organization) Leap

With a market share of only 2–3% of a global market valued at \$140Bn+ in 2024, the market potential & opportunity ahead seems to be meaningful. Momentum is on India's side with a CRDMO CAGR growth from 2019–2024 of 15%, double that of the global growth rate of 7–8%.

Looking ahead, four key tailwinds position India for leadership: realigning global supply chains unlocking \$10–15 billion in value; pricing pressures and policies like the Inflation Reduction Act spurring offshoring (backed by 80% of industry leaders); explosive growth in new modalities at 20–50% CAGR; and a budding local innovation ecosystem fueled by over ₹25,000 crore in government support. The sector has the potential to expand to \$22–25 billion, fueling job creation and growth in the economy.

A Changing World Order. Shifting Growth Engines. India's Turn?

India's share in global CRDMO market—FY 2024

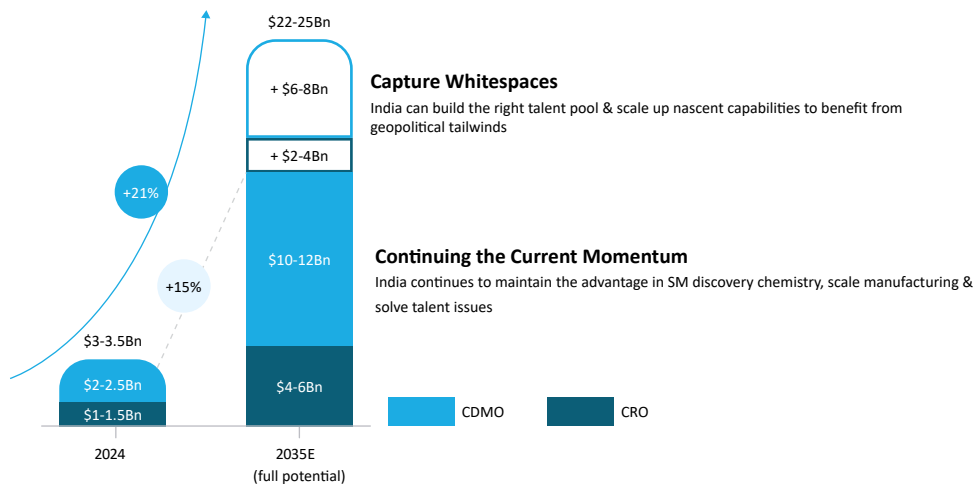

India's CRDMO sector has grown at CAGR 15% from 2019-FY 2024

Source: Boston Consulting Group - BCG: Unleashing the Tiger- Indian CRDMO Sector 2025
bcg-ipso-whitepaper-unleashing-the-tiger.pdf

Competitive Landscape

While North America, Europe, and China continue to dominate the global landscape with shares of 42%, 25%, and 13% respectively, India is steadily gaining ground.

Source: Boston Consulting Group - BCG: Unleashing the Tiger- Indian CRDMO Sector 2025
bcg-ipso-whitepaper-unleashing-the-tiger.pdf

With shifting geopolitical landscapes, Western sponsors expected to shift demand to alternate geographies therefore, generating \$5bn new demand and \$9-10bn unmet demand for India.

Future Outlook

India's pharma sector is transforming into an integrated, end-to-end model overseeing the full drug development lifecycle. In our view, this positions the country to seize a \$10 billion (approx.) opportunity from Western realignments, solidifying its status as a top global innovation.

However, to sustain momentum & seize this opportunity, the industry must address internal challenges & drive critical reforms in government, academia, & financial markets. To stay competitive, Indian CRDMOs must advance up the value & innovation curve, positioning themselves as leaders in new modalities rather than settling for a supporting role.

3. GCCs in India – Riding a Robust Growth Wave

Global Capability Centres (GCCs) have emerged as a key engine of India's services and innovation driven growth, transforming the country into the world's largest hub for offshore enterprise capabilities. From a cost arbitrage model a decade ago, GCCs in India have evolved into high value, innovation led centres that handle core R&D, digital transformation, AI, and global decision making for multinational corporations.

Size and growth trajectory

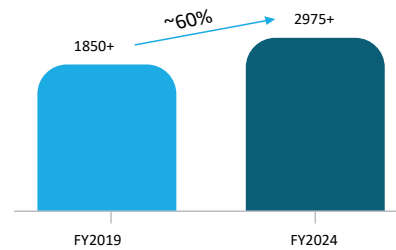

- GCC revenue in India rose from about **USD 40.4 billion in FY19 to roughly USD 64.6 billion by FY24**, implying a healthy annual growth rate of around **11%** depending on the source.- **Boston Consulting Group**

A Changing World Order. Shifting Growth Engines. India's Turn?

(FY2019-FY2024)**

Source: Zinnov: India GCC Landscape Report. The 5-Year Journey- September 2024
zinnov-india-gcc-landscape-the-5-year-report.pdf

- The sector is projected to expand further to **over USD 100–105 billion by 2030**, supported by more than **2,000–2,400 centres** and employment of **2.8–4.5 million professionals**, depending on the projection horizon.

GCC Outlook for 2030

Source: Zinnov: India GCC Landscape Report. The 5-Year Journey- September 2024
zinnov-india-gcc-landscape-the-5-year-report.pdf

Shift from cost to capability

Early GCCs prioritized back-office, IT, and business-process functions to slash costs; today, most new setups target engineering, R&D, AI, and product development. This evolution has boosted the sector's GDP impact, innovation, and skills development, with India now hosting over half the world's GCCs by count and strategic weight.

Geography and policy push

GCCs cluster heavily in the "Big Six" hubs—Bengaluru, Hyderabad, Pune, Chennai, Mumbai, and NCR—housing ~90% of operations and serving as innovation engines for global firms.

Policy initiatives such as the National GCC Policy aim to strengthen and deepen capability-driven mandates.

Economic and strategic impact

GCCs generate high-quality, export-oriented jobs for engineers, data scientists, product managers, and domain experts, seamlessly integrating India's engineering and MBA graduates into global workflows. By anchoring worldwide R&D, AI, and digital transformation hubs, they deepen India's integration in global value chains

Conclusion: India's growth drivers—rising digital adoption, import substitution, consumption growth, manufacturing resurgence, increasing market share in global trade paint a picture of a structurally transforming economy with durable growth potential. These forces are not only reshaping industries and investment landscapes but also creating new avenues for innovation, employment, and inclusive development. If navigated with sound policy, strong institutions, and sustained capital allocation, India has the opportunity to regain lost ground in merchandise trade. In this context, sectors such as data centres, CRDMOs, and GCCs could play a pivotal role, underpinning a multi-decade growth cycle and strengthening India's position as an important anchor in the global economy.

Earnings Trends amidst the ongoing West Asia Crisis

- FY2026 started with expectation of EPS improvement for major indices on the base of weak 2024/25. West Asia crisis has caused significant increase in key input raw materials along with increase in logistics costs. Sectors which are more susceptible to EPS cuts are OMC, select Utilities consumer discretionary and Materials. There could be further second order impact if the commodities prices remain elevated for longer.
- On the backdrop of West Asia Crisis companies started reporting their 4q26 numbers. Of the companies that have reported their numbers so far; performance remains a mixed bag. This might weaken further as we progress through the year in the context of elevated commodity prices. Key trends are:
 - Most of the Banks reported pickup in credit demand driven by SME and corporate book. Margin has stabilized as bulk of the loan book repricing is in numbers; elevated deposit rates will keep a check on margin expansion. Asset quality continues to be benign and West Asia crisis may normalize this number, higher. We largely remain positive on this pack; given the improvement in growth and undemanding valuations.
 - IT Services companies have reported weak trends. The forward guidance has moderated owing to continued macro uncertainty and pricing pressures. On the positive side, deal wins continue to be strong. We find valuation in this pocket reasonable and remain optimistic on recovery.
 - Insurance: GST ITC (input tax credit) and other regulatory changes continue to weigh on company results in the near term. Companies are focusing on improving product mix and margins. General insurers witnessed improvement in operating parameters. We view this sector favorably as some of the large players have significant advantage in terms of distribution and scale; with good runway for growth.
 - Cement: Sector witnessed improvements in EBITDA per ton driven by better pricing. Volume growth also remains healthy. Some of the input costs such as pet coke, coal, packaging material have moved up; which will impact term profitability. The industry is trying to pass on part of cost increase through price hikes.

Flows

DII (Domestic Institutional Investors) inflows at USD 5.0bn have outpaced FPI (Foreign Portfolio Investors) outflows at -USD 4.1bn. Higher crude prices along with pressure on capital inflows could pose pressure on currency. A weakening currency along with persistent global uncertainties would have a bearing on FPI flows.

What should an Investor Do?

Though near-term earnings trend is linked to global developments, valuations have become conducive in many pockets (Refer Table 3). While short-term disruptions would have a bearing on near-term market movements, the impact on the intrinsic value of companies would be limited. Investors may consider staggered allocation to equities to take advantage of favorable valuations and benefit from the near-term potential volatility.

Table 2: Current Vs Historic Valuations of major indices

Index	P/E Ratio	P/B Ratio	10y Median	
			P/E	P/B
BSE SENSEX	22.9	3.3	23.9	3.4
BSE 100	22.9	3.2	24	3.4
BSE 250 SmallCap	30.3	3.3	32.5	2.4
BSE MidCap	29.5	4.1	30.6	2.9
BSE 500	24.7	3.4	25.4	3.3

Scheme	Portfolio Commentary	Portfolio Positioning
Quantum Value Fund	<ul style="list-style-type: none"> During the month we initiated a position in a private life insurer. The life insurance sector has been impacted due to certain regulatory changes in the past few years; this had led to significant derating in the stock. We believe the risk reward now seem favourable for the sector. We trimmed our allocation to a PSU bank, AMC and metal company given the run up in the valuation in the recent past. 	<ul style="list-style-type: none"> Portfolio will focus on names where valuation is at a discount to our fair value estimate. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. This could give a large cap tilt to the portfolio.
Quantum Small Cap Fund	<ul style="list-style-type: none"> The Small Cap Index (Index BSE 250) fully recovered, surging 15.5% amid crude oil price stability. Consumer discretionary, industrials, and BFSI sectors lagged, underperforming relative to the index. We calibrated our consumer discretionary positions—including auto-ancillaries—and reallocated to healthcare and consumption stocks. 	<ul style="list-style-type: none"> During the month, we added three companies- one US focused healthcare company and one IT company where revenue is driven by digital transformation. Also, we added the platform company integrating deals in auto sector where we feel the growth is structural and valuations are reasonable. Remaining opportunistic, we leveraged this correction to add quality names at attractive valuations and reducing cash levels—positioning us to capture structural growth amid volatility and stock-specific opportunities.
Quantum Ethical Fund	<ul style="list-style-type: none"> Sectors such as Industrials and Consumer Discretionary where we were overallocated, supported our performance. Further, our under-allocation to IT and Healthcare aided our performance. However, our under-allocation to Consumer Staples and Metals impacted our relative performance. During the month we allocated to some of our existing holdings in Industrials and Consumer Durables companies. 	<ul style="list-style-type: none"> Indian equities have become relatively more reasonable after the recent correction, creating room for upside, though the trajectory remains sensitive to external risks. The Middle East conflict is a key near-term variable, primarily via its impact on crude, inflation, and external balances—any prolonged disruption could trigger non-linear macro pressures and sharper earnings downgrades, while a resolution would ease these headwinds and support sentiment. While geopolitical developments remain under watch, the portfolio's limited exposure to the affected regions keeps any direct impact negligible. Foreign capital inflows are likely to improve if ongoing geopolitical tensions ease. In the near term, however, market focus may shift toward companies offering strong earnings visibility and a consistent track record of execution. Our overweight allocation to the Consumer Discretionary segment is strategically aligned to benefit from this cyclical recovery. A well-diversified portfolio anchored in quality franchises with strong balance sheets and resilient business models remains appropriately positioned to participate in India's structural growth momentum.
Quantum ELSS Tax Saver Fund	<ul style="list-style-type: none"> During the month we initiated a position in a private life insurer. The life insurance sector has been impacted due to certain regulatory changes in the past few years; this had led to significant derating in the stock. We believe the risk reward now seem favourable for the sector. We trimmed our allocation to a PSU bank, AMC and metal company given the run up in the valuation in the recent past. 	<ul style="list-style-type: none"> Portfolio will focus on names where valuation is at a discount to our fair value estimate. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. This could give a large cap tilt to the portfolio.
Quantum ESG Best In Class Strategy Fund	<ul style="list-style-type: none"> Sectors such as Industrials, Consumer Discretionary and Consumer Staples where we were overallocated, supported our performance. Further, our under-allocation to IT and Energy sectors also aided our performance. However, our overallocation to Healthcare and under-allocation to Metals impacted our relative performance. During the month we exited from a Consumer Discretionary company due to decline in our assessment of risk profile of the company. We allocated to some of our existing holdings in Industrials, Financials and Consumer Durables companies. 	<ul style="list-style-type: none"> Indian market valuations have turned more reasonable, offering scope for optimism on potential upside. However, the duration of the middle east conflict remains the key determinant of the overall impact. Prolonged disruption could lead to increasingly non-linear effects on macroeconomic variables, with disproportionately larger downside risks and sharper downgrades if the situation persists. Conversely, any resolution of the conflict would be incrementally positive for India, easing macro pressures and supporting sentiment. While we continue to closely monitor developments related to external conflict, the portfolio has limited direct exposure to the affected regions, resulting in insignificant direct impact. We believe that foreign capital inflows may pick up in future, if current geopolitical conflicts subside. In the near-term markets may increasingly focus on domestic oriented quality companies with earnings visibility and proven track record of execution. A diversified portfolio emphasizing quality and robust financials, is strategically positioned to leverage India's growth dynamics.

Notes:

The same is for explanation purpose only and should not be construed as a research report, endorsement, or recommendation to buy or sell in any sector/ stock. The sector /stock positions given above may vary basis the market conditions and the Fund Manager's views, and the same may or may not be followed in the future. Please refer the Scheme Information Document(s) of the respective scheme(s) for complete investment strategy and scheme portfolio available on website www.QuantumAMC.com.

Stability at the Short End, Caution at the Long End

India's debt markets heading into May 2026 appear set to remain range-bound, albeit with underlying fragility. Liquidity support from the Reserve Bank of India is currently helping anchor short-term rates, but a combination of global and domestic pressures - elevated crude oil prices, currency weakness, and persistent foreign capital outflows continues to weigh on longer-duration yields. In this context, a prudent approach for investors would be to prioritize capital preservation, maintain shorter duration exposure, and focus on high-quality credit.

The macro and liquidity backdrop remains a key driver of market behavior. The Indian rupee's recent depreciation toward ₹951 per US dollar, alongside crude oil prices hovering in the \$90–100 per barrel range, is contributing to elevated inflation expectations.

Headline inflation is likely to remain in the 4.5% - 5.5% range depending on how prolonged is the war scenario, which is above the RBI's target range and keeps policymakers cautious. At the same time, the central bank appears to have reached the end of its rate easing cycle.

While liquidity injections are stabilizing overnight and short-term rates, overall liquidity conditions remain uneven due to forex interventions and inflation risks linked to commodity prices. Adding to this, foreign portfolio investors have remained net sellers in Indian debt markets this year, with outflows exceeding \$1.22 billion on FYTD basis, as higher global yields reduce the relative attractiveness of Indian fixed income on a currency-adjusted basis.

Within the bond market, government securities have been relatively stable but not immune to volatility. The benchmark 10 year government bond yield has been oscillating within a narrow band of 6.9% to 7.1%³, with intermittent spikes.

In contrast, shorter-duration government securities, particularly in the one- to three-year segment, have exhibited stability and lower mark-to-market volatility. In the corporate bond space, a divergence across credit segments is clearly visible.

AAA-rated issuers continue to command steady spreads of around 60 - 904 basis points over government securities, reflecting strong investor confidence. However, lower-rated credits are facing pressure, with spreads widening by 100 - 2005 basis points, indicating heightened caution toward mid-tier issuers. Meanwhile, State Development Loans are gaining traction, supported by regular auctions and improved liquidity. With spreads of 45 - 655 basis points over government securities, they offer incremental yield with a relatively measured risk profile.

Looking ahead to May 2026, the debt market is expected to remain influenced by a mix of external and domestic factors. The 10 year yield is likely to continue moving within the 6.9–7.1% range, with upside risks if crude prices remain elevated or the rupee weakens further. Liquidity conditions is expected to remain supportive at the short end due to RBI interventions, RBI dividend in May to the tune of ~₹3 trillion though volatility in longer maturities is expected to persist. Inflation is likely to remain steady, and commodity-driven pressures may limit the RBI's ability to shift toward an accommodative stance, reinforcing a policy focus on stability rather than aggressive rate cuts.

In this environment, a disciplined and risk-aware investment approach becomes essential. The relatively steep yield curve favors accrual-based approach over aggressive duration calls. Investors may benefit from maintaining exposure to short-duration government securities and high-quality corporate bonds to manage volatility effectively. Selective allocation to State Development Loans may offer a balance between yield and risk, while dynamic bond funds may offer flexibility to adjust duration as interest rate expectations evolve. At the same time, caution is warranted when considering lower-rated credits or long-duration bonds, at least until there is clarity on inflation trends and currency stability.

Gold In April 2026 : Geopolitical Risk, Policy Repricing, and Structural Support

Gold entered April 2026 on tentative footing after its sharpest monthly correction in over a decade in March. Prices rebounded over 12% from the intra-month low near \$4,098 to open above \$4,600, before consolidating in a \$4,600–\$4,900 range through most of the month¹. The absence of fresh catalysts to extend March's liquidity-driven sell-off, along with an urge for improved diplomatic backdrop, supported a gradual recovery, though persistent macro headwinds capped gains. Gold held above the \$4,600 support as easing tensions between the United States and Iran lifted risk sentiment and softened the US Dollar¹. Strong macro data, including an ISM Manufacturing PMI of 52.71 and resilient labour market prints, had limited directional impact. A two-week ceasefire announced on 8 April drove the month's key upside, lifting gold to find its semblance amidst still distorted global order as crude prices fell and the dollar weakened.

However, optimism faded after mid-April talks in Islamabad failed, followed by a US naval blockade of the Strait of Hormuz. Energy prices rebounded, sentiment weakened, and gold briefly dropped to \$4,632 before stabilizing in the \$4,700 - \$4,850 range on renewed diplomatic signals¹. Year-to-date, gold remained elevated, up 11% to \$4,7931. While gains have moderated from January's surge toward \$5,4191, the metal's structural support remains intact.

Key Drivers of Gold's Performance in April 2026

1. Geopolitical Risk (Strait of Hormuz): Primary Driver

The dominant driver of gold in April 2026 remained the evolving Middle East situation. The Strait of Hormuz traffic remains well below pre-conflict levels even during the two-week ceasefire. The crude oil prices, moderated on ceasefire optimism. For gold, the oil – inflation rates linkage remains key as persistently high oil prices sustain inflation, prompting hawkish central bank responses, and lift real yields creating headwinds for gold. Conversely, the April pullback in crude supported gold via easing inflation risks, a softer dollar, and lower yields. This interplay is likely to remain central in May as well.

The geopolitical risk premium in gold was highly volatile. The 8 April ceasefire drove the month's strongest upside, while the breakdown of Islamabad talks and the subsequent US naval blockade quickly reversed sentiment. Second-round negotiations in Islamabad resumed on 21 April 2026, with an extension of the ceasefire to allow talks to continue; however, the US blockade of Iranian ports/shipments has remained in place, keeping risks around Strait of Hormuz access intact.

2. Monetary Policy Repricing and the 'Higher-for-Longer' Narrative –

The dominant structural headwind for gold in April was the sharp shift in global rate expectations. At the start of 2026, markets expected at least two Federal Reserve cuts; by mid-April, that view had reversed. According to CME Group's FedWatch Tool, markets now expect that the policy rate will likely remain in the 3.50% - 3.75% range through end-2026, with a slight probability of easing and even a tail risk of hikes if energy-led inflation persists. This repricing has been driven by firmer inflation. US CPI for March rose to 3.3% YoY (from 2.4%), led by fuel and transport, while core CPI edged up to 2.6%¹. Inflation expectations also worsened, with the University of Michigan's one-year outlook jumping from 3.8% to 4.8%, indicating broader inflation concerns¹.

The Federal Reserve in their FOMC speech and minutes has maintained a cautious, data-dependent stance, signalling policy will stay restrictive until inflation meaningfully declines, implying a prolonged period of positive real rates, a key headwind for gold. Globally, policy has also turned more hawkish. The ECB signalled a possible hike, the Bank of Japan raised rates to 0.75% with scope for more tightening, and the Bank of England continues to face elevated inflation expectations despite weak growth. Overall, the global policy backdrop in April 2026 tilted decisively hawkish, weighing on gold. **However, higher rates remain policy makers big dilemma on account of higher debt levels that prevails in the developed world leading to higher interest payments and thereby higher deficits.**

3. US Dollar Dynamics

The US Dollar provided a nuanced and, at times, constructive backdrop for gold in April. The dollar index softened from the elevated levels of late March, where it briefly broke above the 100 level, to trade near six-week lows around 97.96 – 98.66 by mid-April¹. The pullback was driven by several forces - improved risk appetite following ceasefire announcements, a partial repricing away from extreme rate-hike scenarios, and renewed focus on the structural weaknesses of the US fiscal position, a theme likely to remain salient into the November 2026 mid-term elections **and beyond**. Dollar weakness of this magnitude with the DXY declining approximately 2.3% from its March peak¹ provided support to gold pricing and recovered sharply from the post-blockade sell-off as the dollar continued to give ground.

4. Central Bank Demand and Structural Support

Notwithstanding the near-term volatility, the structural underpinning of the gold market anchored by sustained official-sector demand, remained a constructive influence in April. Central bank purchases continued during the month, with major reserve managers maintaining their diversification programmes. China's central bank extended its purchase streak into its 17th consecutive month in March, adding approximately 5 tonnes during that period². Global central banks collectively added a net 25 tonnes in the first two months of 2026. The pace of RBI gold purchases has moderated to just 0.17 tonnes year to date².

Looking ahead, while the sharp rise in crude import bills, which pressures the foreign exchange reserves of energy-importing central banks, several of which are also significant gold buyers has moderated the pace of accumulation, it has not reversed the structural commitment to diversification. The long-run impetus behind official-sector gold demand including concerns over sovereign debt sustainability, geopolitical fragmentation of the financial system, and the limitations of dollar-denominated reserve assets, remains structurally intact.

Gold Quarterly ETF Flows.

Global gold ETF flows remained positive in Q1 2026 at around US\$12.3bn², extending the inflow streak to seven quarters, though momentum reversed sharply in March with record outflows of around US\$11.8bn² led by North America amid rising yields and shifting Fed expectations. Despite this, AUM remained resilient at around US\$606bn², supported by price recovery and sustained Asian demand.

India stood out, recording its strongest ever quarterly inflows around INR 31,600 Cr³, with continued retail participation and 11 consecutive months of inflows. Holdings rose to around 115 tonnes², highlighting structural domestic demand even as global flows turned volatile.

May Outlook - Cautious Optimism Amid Geopolitical and Policy Crosscurrents

Gold enters May 2026 in a cautiously constructive posture, having repeatedly defended the \$4,600 level as structural support and recovered from the March correction. The metal retains the possibility of upside potential, though the path remains non-linear and sensitive to evolving geopolitical and monetary policy conditions. If there is a gradual de-escalation in the Middle East, with partial restoration of Strait of Hormuz shipping by mid or end of May, the crude oil prices could moderate, easing inflation pressures, with the Federal Reserve maintaining rates on hold through mid-year before potential rate cuts in H2 2026. A modestly weaker US dollar and softer real yields would support gold, underpinned by continued central bank and investment demand. Thus, gold's outlook for May 2026 will be shaped primarily by the trajectory of the Middle East conflict, whether it stabilises or intensifies and by the Federal Reserve's evolving response to inflationary pressures.

Markets and the Fed appear inclined to look through the current war-related price shock, and that is reasonable provided the shock remains temporary. The key risk is that what begins as a supply-driven inflation impulse can still become more entrenched if it persists longer. Beyond the near term, the broader macro setup still looks stagflationary. If activity slows while inflation remains sticky, both gold and industrial metals should remain well supported, albeit for different reasons: gold as a stabilising asset against macro stress and policy credibility, industrial metals through constrained supply and still-resilient nominal demand. A severe stagflationary phase could emerge as early as the third quarter, but that timing could be pushed back if the current inflation impulse dissipates if the Strait of Hormuz reopens fully and the Trump administration leans on policy support to keep growth and sentiment firmer ahead of the mid-terms.

On balance, the timing of any sustained move in gold will depend on if and how stagflation risks evolve. In a more adverse scenario, where growth slows while inflation remains sticky, supportive conditions for gold could emerge sooner. Conversely, if growth proves more resilient and the current inflation impulse moderates, the catalysts for a meaningful rally may be deferred, potentially beyond the US mid-term election period.

For investors, current price levels may offer a relatively opportunistic entry point compared with the January 2026 highs, supported by gold's evolving role in portfolios and the plausible dynamics that could favour gold. Structural tailwinds, including sustained fiscal expansion, central bank reserve diversification, and the gradual erosion of confidence in the greenback, continue to provide a supportive backdrop.

Key triggers to look out for include US - Iran negotiations, US inflation data (CPI, PCE), Federal Reserve guidance, ECB, BOE and Bank of Japan policy signals, US preliminary GDP quarterly data, US growth and labour market data.

Investment Objective: The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve returns equivalent to the Nifty by "passive" investment. The scheme will be managed by replicating the Index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, management expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.

#BSE 500 TRI, ##BSE 200 TRI, ###BSE Sensex TRI. **Past performance may or may not be sustained in the future.** The above SIP performance is for Quantum Value Fund - Direct Plan and Regular Plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. ##As TRI data is not available since inception of the scheme, Tier II benchmark performance is calculated using composite CAGR BSE 200 index PRI Value from March 13, 2006 to July 31, 2006 and TRI Value since August 1, 2006. Returns are net of total expenses.

#Domestic Price of Gold, ##CRISIL 10 Year Gilt Index. **Past performance may or may not be sustained in the future.** The above SIP performance is for Quantum Gold Savings Fund - Direct Plan and Regular Plan - Growth option. Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses.
