Is Your Withdrawal Strategy Costing You More Than You Realize?

As we close in on March 31, 2026, there's a far more important decision facing retail mutual fund investors than which fund to buy next. It's this: **How are you planning to withdraw your money?**

With the proposed Income Tax Act, 2025 set to come into effect from April 1, 2026, the long-standing Growth vs Income Distribution Cum Capital Withdrawal Option (IDCW) debate has quietly evolved into something much more practical - IDCW versus SWP.

For many years, IDCW payouts have carried a sense of comfort. A distribution credited to the bank account often creates the impression that the investment is "paying back" regularly. But here's the more relevant question: **at what cost?**

Under current rules, IDCW payouts are added to investor total income and taxed at investor applicable slab rate. Accordingly, for an investor in the 30% tax bracket (plus applicable surcharge and cess), a portion of the IDCW would be payable toward taxes, thereby reducing the effective amount retained.

Let's look at a simple illustration.

Mrs. A receives ₹50,000 as an IDCW payout and is in the 30% tax bracket. Roughly ₹15,000 (or more, depending on surcharge) could go toward taxes. Effective in-hand amount? Around ₹35,000.

Now compare that with a **Systematic Withdrawal Plan (SWP)**.

With an SWP, Mrs. A will not be withdrawing only investments. Each ₹50,000 withdrawal consists of two parts - invested capital and the capital gain portion. Tax applies to the gain component, and the rate depends on holding period and asset class.

Suppose out of ₹50,000 withdrawn, if ₹10,000 represents gains and if it qualifies as long-term capital gains on equity, taxation applies to that ₹10,000.

At a 12.5% LTCG rate (subject to prevailing rules), the tax outgo would be approximately ₹1,250.

Mrs. A's in-hand amount? Approx to ₹48,750.

That's not only difference. That's structural efficiency.

There is also an important structural aspect of IDCW that investors should understand. When an IDCW payout is declared, the number of units held by the investor remains unchanged; however, the Net Asset Value (NAV) of the scheme falls to the extent of the distribution (adjusted for applicable taxes and expenses). In simple terms, the payout does not represent "extra" return generated over and above the investment value. It is a distribution out of the scheme's accumulated gains, and the NAV adjusts downward accordingly. While the unit count stays constant, the overall value of the investment reduces on the ex-distribution date to reflect the payout. This is why an IDCW should not be viewed as additional withdrawal independent of scheme performance, but rather as a different mode of receiving returns.

So the question becomes: **Why pay slab-rate tax on IDCW when investor can structure to withdraw and pay tax on the capital gain portion?**

Of course, suitability depends on investor investment objectives, holding period, asset allocation, and overall financial plan. But from a mathematical and tax-efficiency perspective, SWP is the more suitable strategy for investors seeking regular withdrawal / cash flow.

How SWPs Work During Market Volatility?

A common question investors ask is: *"What happens if markets fall? Would withdrawals result in redeeming units at low NAVs?"*

It's important to note that in a market downturn, all schemes whether equity or multi-asset may see NAVs decline based on their underlying investments. However, the impact on withdrawals can be managed through portfolio construction.

For instance, SWPs in multi-asset allocation funds may help moderate the effect of market swings. These funds dynamically invest across equity, debt, and gold – thus rebalancing automatically according to the fund's strategy. While equity units may still reflect market movements, the non-equity portion can act as a buffer, potentially reducing the proportion of withdrawals that come from reduced equity valuations. Essentially, the withdrawal strategy and asset allocation strategy can work together to manage volatility, rather than operating in isolation.

So does this make IDCW irrelevant?

Not necessarily. IDCW may still be relevant for investors in lower tax brackets or those who prefer regular withdrawal / cash flow. But for higher-tax-bracket investors focused on long-term, tax-efficient withdrawals - SWPs combined with thoughtful asset allocation could potentially offer structural advantages, allowing more of the invested capital to stay invested and compound over time.

As we step into a new tax year, investors may not seek only returns but also structure withdrawals in a way that allowed more of that return to stay invested, compound longer, and work harder.

Markets were range bound with a marginal decline in Sensex. BSE mid and small cap indices advanced by 1.1% and 0.5% respectively. On the global front, the US (S&P 500 Index) marginally declined during the month. Emerging Market Index continued to do well with MSCI Emerging Market rising by 4.7%.¹

Key Developments for the month were:

- U.S. Supreme Court ruled that the president lacks the authority to impose broad tariffs. President Trump has invoked Section 122 of the Trade Act of 1974 to impose a temporary 15% global tariff for up to 150 days. While the final verdict on tariff is awaited, lower than prior expectation of 18% can improve competitiveness of Indian exports.
- Geopolitical tensions especially in the Middle East have escalated, which may impact crude price. Benign crude has helped India; any risk to that may impact overall growth. From equity perspective, despite the temporary rate cuts that few countries have witnessed (including India), our view is interest rates will broadly remain higher over the long term; and that will have a bearing on cost of capital for companies globally.
- Anthropic launched specialized open-source plugins for Claude Cowork, catering to various applications. These "agentic" AI tools could automate complex tasks across multiple functions, traditionally core to IT services and BPO. The belief that AI agents & platforms can be plugged into large corporations is a fallacy. Enterprise technology landscapes are built on multiple technologies and databases that often take longer to adapt to new waves.
- New AI platforms will not become part of enterprise architectures without System Integrators (SIs). Indian IT service players are essential partners for scaling models like Claude and OpenAI. Though IT service companies would pass on productivity benefits gained by embedding AI into existing projects, the incremental volume of work triggered by AI adoption would ensure that overall deal sizes aren't impacted.
- In India, broader economic indicators have shown a broad based improvement. Indicators such as Bank credit growth, Auto sales, Power consumption, e-way bills and cement production have shown improvement. Despite weak project launches, housing demand in top 7 cities saw a healthy recovery in January after a blip in the prior month.² The recently concluded quarter saw a sequential improvement in demand trends. Net Sales growth for Nifty 500 for Dec-2025 quarter stood at 9.5% Vs 8.2% in the prior quarter.³
- Coming to sector performance, Capital goods, Energy, Metals and Consumer Durables were leaders w.r.t NSE 500, during the month. IT was the key laggard during the month.
- February witnessed FII & DII inflows to the tune of \$ 4.3 bn & \$ 2.9 respectively.⁴ Conducive valuation, improving earning trends, reasonable performance of EM indices and lower than anticipated tariffs could have helped in positive foreign flows.

Table 1: Performance of Major Indices during the Month

Domestic Indices	1 Month	1 Year	3 Year	5 Year	10 Year
BSE 500	0.5	-2.8	63.3	100.0	348.7
BSE 200	0.5	-2.5	62.5	97.6	345.0
BSE SENSEX	-1.1	-4.4	43.5	76.6	300.9
BSE MidCap	1.1	-2.7	94.4	141.1	432.8
BSE SmallCap	0.5	-5.8	81.4	150.7	456.7

Data as of 28th February 2026.¹ ; Past performance may or may not be sustained in the future.

Table 2: Current Vs Historic Valuations of major indices

Index	P/E Ratio	P/B Ratio	10y Median	
			P/E	P/B
BSE SENSEX	23.1	3.5	23.9	3.4
BSE 100	23.0	3.4	24.0	3.4
BSE 250 SmallCap	28.5	3.1	32.6	2.4
BSE MidCap	30.3	4.1	30.5	2.9
BSE 500	24.7	3.5	25.3	3.2

P/E: Price to Earnings; P/B: Price to Book; Data as of 28th February 2026¹; Past performance may or may not be sustained in the future.

- While the near-term economic trend is recovering; valuations appear reasonable in pockets within the large cap space (Refer Table 2). Given the correction in broader markets such as small caps, valuations here have become conducive and there are good opportunities for bottom-up stock picking.
- The 125bps interest rate cuts, benign inflation, good monsoon and consumption boost from tax cuts and GST rationalization augurs well for the economy over the medium term. The risk reward appears reasonable for a long-term investor.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Scheme	Portfolio Commentary	Portfolio Positioning
Quantum Value Fund	<ul style="list-style-type: none"> During the month, we trimmed our positions in a PSU bank and a metal company where we see most of the upside are captured in current valuation. We increased our position in a leading private sector bank and a cement company, both of which offer good upside and clear catalysts. 	<ul style="list-style-type: none"> Portfolio will focus on names where valuation is at a discount to our fair value estimate. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. This could give a large cap tilt to the portfolio.
Quantum Small Cap Fund	<ul style="list-style-type: none"> The market recovered during the month of February with Small Cap Index (Index BSE 250) posting 3.56% positive returns. Sectors such as consumer discretionary including auto ancillaries, BFSI supported portfolio performance, while export related sectors including IT were drag on performance. The strategy remains overweight in financials where we expect credit growth to improve and valuations remain attractive. Other overweight positions include consumer discretionary, notably auto-ancillaries, reflecting confidence in sector resilience. 	<ul style="list-style-type: none"> During the month, we increased weight in one engineering company where order book is healthy and execution is expected to improve. Disciplined trimming was applied to positions in BFSI and consumer discretionary stocks where valuations surged limiting future upside. We remain vigilant amid global events, tactically adjusting positions to shield the portfolio from uncertainties. This positions us ideally to harness structural growth drivers, navigating volatility while seizing stock-specific opportunities.
Quantum Ethical Fund	<ul style="list-style-type: none"> During the month, the fund outperformed its benchmark. Sectors such as Consumer Discretionary, where we are overallocated, supported our performance. Further, our allocation to Industrials and under-allocation to IT, Consumer Staples and Materials aided performance. However, our under-allocation to Metals, Energy and Healthcare impacted our relative performance. During the month, we allocated to some of our existing holdings in Industrials, select Consumer Staples and marginally to IT sector. 	<ul style="list-style-type: none"> The trade agreement enhances India's export positioning, particularly across manufacturing sectors, and is expected to reinforce market confidence. As global uncertainties moderate, foreign inflows could strengthen, with investor focus increasingly centered on earnings durability and execution discipline. While geopolitical developments remain under watch, the portfolio's limited exposure to the affected regions keeps any direct impact negligible. Supportive measures such as income tax relief, interest rate easing, and GST adjustments are likely to gradually stimulate domestic consumption. Our overweight allocation to the Consumer Discretionary segment is strategically aligned to benefit from this cyclical recovery. A well-diversified portfolio anchored in quality franchises with strong balance sheets and resilient business models remains appropriately positioned to participate in India's structural growth momentum.
Quantum ELSS Tax Saver Fund	<ul style="list-style-type: none"> During the month, we trimmed our positions in a PSU bank and a metal company where we see most of the upside are captured in current valuation. We increased our position in a leading private sector bank and a cement company, both of which offer good upside and clear catalysts. 	<ul style="list-style-type: none"> Portfolio will focus on names where valuation is at a discount to our fair value estimate. Thrust on portfolio liquidity and governance should hold us in good stead during volatile markets. This could give a large cap tilt to the portfolio.
Quantum ESG Best In Class Strategy Fund	<ul style="list-style-type: none"> During the month, the fund outperformed its benchmark. Sectors such as Consumer Discretionary, where we are overallocated, supported our performance. Further, our allocation to Industrials and under-allocation to IT aided performance. However, our under-allocation to Financials, Metals and Energy impacted our relative performance. During the month we exited from a company in Consumer Staples sector due to decline in our assessment of risk profile of the company. We allocated to some of our existing holdings in Industrials, IT and Financials sectors. 	<ul style="list-style-type: none"> The trade deal improves India's relative export competitiveness, particularly across manufacturing sectors, and is expected to lift sentiments. As external risks recede, foreign capital inflows may pickup, while markets increasingly focus on earnings visibility and execution quality to determine future direction. While we continue to closely monitor developments related to external conflict, the portfolio has limited direct exposure to the affected regions, resulting in insignificant direct impact. As the income tax, interest rate and GST cuts gradually revive consumption in the economy, our overweight position in the Consumer Discretionary sector should benefit. A diversified portfolio emphasizing quality and robust financials, is strategically positioned to leverage India's growth dynamics.

Navigating India's Bond Market: Macro Anchors and Market Dynamics by the end of FY 26

As FY26 draws to a close, India's bond markets sit at the crossroads of macro stability, fiscal pressures, and investor sentiment. For fixed-income investors, grasping this interplay is key to reading yields and identifying opportunities in a market influenced by both domestic policy and global forces.

Given the recent geopolitical tensions escalating in the middle eastern region over the weekend - What concerns markets most is the potential disruption to energy supply chains, particularly through the Strait of Hormuz, a vital artery for global crude flows. Even the perception of instability in this corridor may inject a sizeable geopolitical risk premium into oil prices, driving sharp volatility in global energy markets.

From a macroeconomic standpoint, we believe sustained uptick in crude prices could eventually translate into inflationary pressures. Elevated oil prices tend to widen current account deficits, strain fiscal balances and complicate monetary policy trajectories. In the debt market too, this dynamic could result in upward pressure on government bond yields as investors demand compensation for higher inflation and risk uncertainty.

Macro Anchors: RBI and Inflation

At the heart of the market's calm lies the **RBI's policy stance**. In its February 2026 Monetary Policy Committee review, the RBI kept the policy repo rate unchanged, signaling a data-dependent, neutral approach. Inflation remains comfortably within the RBI's target band, while growth forecasts hold steady at around 7%–7.5%.

What this means for investors: With no immediate rate changes on the horizon, **bond yields are being shaped less by domestic policy surprises and more by liquidity management, fiscal supply, and global developments**. The RBI continues to actively manage liquidity through Open Market Operations and targeted interventions, buffering sharp yield moves while maintaining orderly markets.

Fiscal Realities: Borrowing Pressures

Fiscal realities are central to the market story. The Union Budget 2026 - 27 set record borrowing above ₹17 trillion¹, while February state auctions raised over ₹46,000 crore², exceeding broader market expectations. This heavy supply pressures yields but also creates opportunities for long-term investors to monitor demand and absorption patterns.

Market Dynamics: Yields and Auctions

For most of February, the **10-year benchmark yield** has oscillated in a tight range of 6.67% - 6.70%³, reflecting cautious optimism. **Strong state auction demand and institutional buying**, particularly from insurance companies and pension funds, has provided support, preventing sharp spikes despite the heavy issuance calendar.

From a portfolio perspective, this is a market where **curve management matters**. Shorter tenors are influenced by liquidity flows and central bank operations, while long-end yields reflect supply expectations and global rates. A tactical barbell approach - balancing intermediate maturities with selective long-duration exposure could help navigate this landscape.

Foreign portfolio investors have returned cautiously, supported by trade deals and improved sentiment, but remain sensitive to global rates and commodity shocks. These domestic and foreign flows help stabilize yields, yet external factors like oil price swings and U.S. policy shifts could quickly impact curve dynamics.

While these geopolitical and energy-driven risks remain elevated, broader macroeconomic factors continue to offer structural support to bond markets; however, investors should remain agile and cautious, as near-term volatility and sharp repricing risks are likely to persist. In the near term, 10-year yields are likely to remain range-bound at 6.60–6.85%, supported by liquidity operations and institutional demand. For active investors, opportunities lie in monitoring state and central issuance, assessing RBI liquidity trends, and factoring global macro signals into duration decisions, balancing macro stability with fiscal-driven tactical positioning.

A dynamic bond fund with low credit risk allows investors to actively manage duration across different maturities. By concentrating on high-quality government and corporate debt, it balances risk management with the potential for attractive yields.

Source: India Budget Documents¹, Reserve Bank of India (RBI)², Ministry of Statistics & Program Implementation (MOSPI), Bloomberg³

Portfolio Commentary

- We remain constructive on Indian government bonds, supported by improving fiscal fundamentals, a steady revival in domestic growth, benign inflation trends, and an overall supportive monetary and fiscal policy backdrop.
- While short-term uncertainties persist, including the outcome of trade negotiations with the U.S., global inflation dynamics, and geopolitical developments - we believe the likelihood of further rate cuts has diminished unless growth shows a sharp slowdown. The RBI may, however, consider more Open Market Operations (OMOs) to inject liquidity and provide support to bond yields.

Portfolio Positioning

- Given ongoing global uncertainties, we are taking a balanced stance on the Indian bond market in 2026. **Our approach focuses on steady accrual while staying flexible to tactical opportunities**, including selective duration positions when attractive.
- We see potential in 2–3 year AAA Rated PSU bonds, which currently offer favorable spreads over government securities and in the 30–40 year segment for tactical plays. We remain cautious on SDLs due to expected higher supply later in the year.

Demand Rebuilds Amid Inflation Stickiness, Slowing Growth and Geopolitical Risk

Gold entered February 2026 consolidating around \$4,800, after a steep fall from its late-January peak of \$5,598. For much of the month, price action remained choppy, with price oscillating broadly between \$4,700 and \$5,000 as persistent dip-buying interest offset lingering macro uncertainty.¹ A softer U.S. dollar, driven by signs of disinflation, provided intermittent support, keeping market attention firmly on key economic data releases. Eventually, gold broke out of its consolidation range, reclaiming the \$5,000 level and extending gains of nearly 19% from the month's low as geopolitical tensions, mixed U.S. data, sustained positive inflows, and renewed tariff uncertainty reinforced confidence in gold.

The key drivers for gold momentum in February were fivefold –

- **Emerging signs of stagflation from US economy:**

US growth momentum cooled meaningfully while core inflation remained firm. The advanced estimates showed Q4 US growth slowing sharply to 1.4% annualized from 4.4% in Q3, while core PCE inflation accelerated to 3.0% year-on-year, with a firm 0.4% monthly gain². Data on Friday showed that U.S. producer prices rose by 0.8% more than expected at 0.3%, suggesting inflation could pick up in coming months¹. The combination of moderating GDP growth and resilient core PCE inflation reinforced a stagflationary undertone.

- **Shifting US Rate Expectations:**

The minutes from Federal Reserve painted slightly hawkish tone. The communication leaned cautious, with policymakers signalling reluctance to ease prematurely. While this capped the upside in gold, the absence of a renewed tightening bias also prevented any downsides either. The US Dollar Index rebounded but remained broadly range-bound showcasing signs of its inability to make meaningful headway due to ebb and flow of disinflation expectations, providing intermittent support to gold.

- **Escalating Geopolitical Risks:**

U.S. and Israel launched coordinated strikes on Iran, reportedly killing Supreme Leader Ayatollah Ali Khamenei, marking a sharp escalation in Middle East tensions and materially elevating global geopolitical risk. The incident has moved beyond rhetoric and military posturing into direct confrontation, amplifying uncertainty across markets. Iran responded forcefully, targeting Israel, U.S. military bases across the region and critical civilian infrastructure in neighbouring Gulf states, raising the spectre of a broader regional conflict and embedding a deeper risk premium into global asset prices.

- **Trade Policy Risk:**

Trade policy uncertainty intensified after the Supreme Court of the United States struck down the administration's tariff regime enacted under 1977 emergency powers, ruling the legal basis invalid. The decision marked a setback for President Donald Trump and briefly disrupted the existing tariff structure. However, the move did not signal de-escalation. The administration swiftly invoked Section 122 of the Trade Act of 1974, introducing a 10% global tariff with scope to raise it to 15% for 150 days, partially replacing the invalidated measures. Markets viewed the sequence not as resolution, but as continued policy uncertainty, reinforcing trade friction concerns and sustaining uncertainty led demand for gold.

- **Structural Allocation Flows:**

Beyond macro signals, the quality of buying shifted. Data from the World Gold Council as on 20th Feb'2026, showed exchange-traded product holdings rising through the month, with year-to-date inflows crossing one million ounces³. The pickup in flows signalled a meaningful shift from the cautious tone seen earlier in the month and coincided with gold's rebound from recent lows, reinforcing the improvement in broader market confidence.

March Outlook: Inflation, Labour Signals & Geopolitical Triggers

- Unlike prior contained flare-ups, the current escalation US – Israel – Iran war has drawn in multiple Middle Eastern nations, raising the risk of a sustained and volatile phase rather than a short-lived shock. U.S. President Donald Trump indicated that the U.S. campaign against Iran could last four to five weeks, shifting market focus from event risk to duration risk. Gold being a safe-haven asset, is expected to be on the bullish and supportive bias, with any progressive talks being the immediate risk to this short-term outlook.
- On the data front, March's key focus will be on upcoming inflation and labour data, as these could reshape expectations around interest rates. Markets will closely track both core and headline inflation to assess whether February's 3.0% core reading marked a pause in price pressures or the beginning of a more persistent trend.
- In March, the Federal Reserve's policy decision on 18 March will be a key focal point for markets. The Federal Reserve is widely expected to keep rates unchanged at 3.50% –3.75%, reinforcing a cautious stance toward easing. Such an outcome would likely sustain underlying dollar firmness unless the accompanying communication signals a more dovish shift. The event could trigger bouts of volatility in the yellow metal, particularly if forward guidance meaningfully alters expectations for the timing of rate cuts.

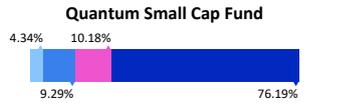

- Employment indicators, including payroll growth and wage data, will also be important in shaping views on the timing of policy moves. In addition, PMI surveys and consumer sentiment data will offer further insight into the strength of US economic growth following the slowdown seen in Q4.
- The US President's authority under Section 122 only enables the imposition of tariffs for up to 150 days. What happens after that?

Long term:

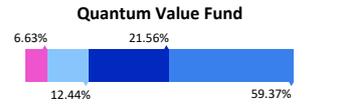

- The macro picture is closely resembling a late-cycle economic environment characterized by slowing growth, sticky inflation pockets, elevated fiscal uncertainty and persistent geopolitical risk. Unless growth re-accelerates decisively alongside rapid disinflation, the balance of risks over the year remains skewed toward structurally constructive view of prices rather than sustained downside.
- Powell is likely to preside over only two more FOMC meetings and is expected to resist rate cuts absent a clear deterioration in labour market conditions. As we approach the midterm elections in the US, Trump will be keen to project a stronger economy, thus conflicting and making rate cuts politically and economically harder to justify. Within that narrow window of Powell exit and Trumps economic posturing, there could be possibility of two rate cuts under the new Trump nominated Fed chair, which could further fuel gold.
- The Trump administration is likely to pursue policies aimed at boosting economic activity ahead of the November 2026 mid-term elections. Alongside more traditional fiscal stimulus and the residual impact of last year's "One Big Beautiful Bill," policy efforts could extend to easing access to mortgage credit, encouraging banks to more actively monetise their Treasury holdings, and potentially revaluing the Treasury's gold reserves.
- If a combination of Federal Reserve easing and government stimulus succeeds in lifting growth, the resulting illusionary boom could raise the risk of a sharp macro adjustment thereafter, with elevated inflation and slowing growth potentially producing a stagflationary environment. Historically, stagflation has been among the most supportive macroeconomic backdrops for gold.
- Further, the prospects of a weakening dollar and mounting questions over its reserve-currency status have acted as a significant catalyst for the ongoing bull run in gold. Amidst the vacuum created by the lack of credible alternative currency capable of assuming global reserve status, central banks are expected to continue increasing gold allocations as a strategic diversification tool.
- The possibility of further consolidation cannot be ruled out and should be viewed as an opportunity to incrementally increase exposure. A disciplined, strategic approach to allocation remains prudent, with gold serving as a diversification and risk-management tool. A disciplined allocation of about 15% to gold remains optimal for diversification and risk management within a balanced portfolio.

Investment Objective: The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve returns equivalent to the Nifty by "passive" investment. The scheme will be managed by replicating the Index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, management expenses and other factors which may cause tracking error. There is no assurance that the Investment Objective of the Scheme will be achieved.

#BSE 500 TRI, ##BSE 200 TRI, ###BSE Sensex TRI. **Past performance may or may not be sustained in the future.** The above SIP performance is for Quantum ELSS Tax Saver Fund - Direct Plan and Regular Plan - Growth option. Scheme performance has been calculated using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years, and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. Returns are net of total expenses.
