EQUITY OUTLOOK BY

Sorbh Gupta

Fund Manager, Equity

S&P BSE SENSEX declined by -4.47 % on a total return basis in the month of 2022. It has outperformed developed market indices like S&P 500 (-8.2%) and Dow Jones Industrial Average Index (-6.56%). S&P BSE SENSEX has also outperformed MSCI Emerging Market Index (-6.62%). The broader market has been weaker, S&P BSE Midcap Index has declined by -6.00% for the month & S&P BSE Small cap Index declined by 5.90%. Metal Sector has been the biggest loser falling by -12.9%. The BSE Auto Index was the only sectoral index in the green moving up by 1.5%.

The month of June-22 has seen FPI outflows of US\$ 6.43 bn. This has been the second worst month of FPI flows since FPI investments were allowed to invest in India in 1991. Interestingly, of the five 'worst ever' months of FPI flows, 4 have come in this calendar year. Domestic institutional investors (Mutual Funds & Insurance put together) have been net buyers for the month of June 2022 to the tune of US\$ 5.97 bn.

Quantum Long Term Equity Value Fund (QLTEVF) saw a decline of -4.49% in its NAV in the month of June 2022. This compares to a -5.07% decline in its Tier I benchmark S&P BSE 500 & -4.94% decline in its Tier II Benchmark S&P BSE 200. Some of our stocks in the Auto & Financial sector showed resilience in an otherwise weak market & contributed to the outperformance. Cash in the scheme stood at approximately 2.9% at the end of the month. The portfolio is valued at 12.9x FY24E consensus earnings vs. the S&P BSE Sensex valuations of 17.2x FY24E consensus earnings.

The fund owns three of the top four listed 2-wheeler auto OEMs with an aggregate weight of approximately 12%. Our outsized positioning in the sector reflects our belief, that India's auto sector (specifically two wheelers) remains one of the few examples of country's manufacturing prowess notwithstanding past few years of slowdown.

Home-grown two-wheeler makers have not only kept the best of the MNC competition at bay but also captured market share in the export market especially in emerging markets in the last two decades. Overall, the following medium-term to long-term investment thesis for the sector remains intact.

- Large domestic two-wheeler opportunity driven by increasing income levels, poor public transportation infrastructure and cheaper cost of ownership.
- Expanding export opportunity in markets having similar market dynamics & demographics as India
- Excellent brand equity developed over time by delivering high quality reliable products & after-sales support.
- Well entrenched distribution network of both of sales & service support.

(Past performance may or may not be sustained in the future)

The two-wheeler industry has gone through a tougher time in the past 4-5 years as regulatory changes like disk brakes, longer tenure insurance and input cost inflation have pushed the product price by 40-45%. This elevated pricing combined with a lacklustre increase in disposable income has resulted in the postponement of demand. The Covid-19 induced lockdowns & advent of 'work from home' culture has also contracted the market size.

QUANTUM'S VIEW FOR JUNE 2022

Adhering to Churchill's adage 'Never let a crisis go waste', the managements of top OEMs in the Indian 2-wheeler have used this slowdown to work on their product mix, optimize cost, churn efficiencies, and take judicious price hikes. This is getting reflected in the recent reported all time high EBITDA per vehicle despite working with 21% lower volumes lower volumes.

EBIDTA per Vehicle (Rs)	FY19	Q4FY22	% Change
Company 1	9,844	13,982	42%
Company 2	6,304	6,961	10%
Company 3	3,600	6,501	81%
Company 4	35,621	40,661	14%
	FY19	FY22	
Industry Volumes mn (including Exports)	16.4	13.0	-21%

The domestic 2-W volumes in FY22 were the lowest since FY11. This shows a probable postponement of replacement decision due to higher prices & lower disposable income. This also substantiates that the industry is catering to just the replacement demand. The cyclical recovery in the economy & the related boost in individual disposable income should unlock this bunched-up demand in the next couple of years resulting in strong financial performance by these companies.

Mn units	FY11	FY12	FY13	FY14	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22
Domestic 2-W volume	9	10.1	10.1	10.5	10.7	10.7	11.1	12.6	13.6	11.2	10	9

A pertinent question here is, why not look beyond OEMs? Except for few auto-ancillary companies with niche products and strong brand recall, the superior pricing power of OEMs has enabled them to record higher return ratios during good times. In a demand upcycle, OEMs have historically been able to capture a higher share of the profit pool. A strong balance sheet places them in a good position to tide over down cycles and transitional phases. A typical auto ancillary company operates on a cost-plus model offering little upside during an upcycle.

On EV (electric vehicles) too all the leading OEMs seem to well prepared for to participate in the expanding market. They have invested in EV technology and have announced their EV product pipelines. A strong track record of delivering quality products & efficient after-sales services will act as an edge for the traditional players over startups (who appear to make enough mistakes in haste to gain market share).

DEBT OUTLOOK BY

Pankaj Pathak

Fund Manager,
Fixed Income

June 2022 was a month of two halves. The first half of the month was dominated by an 'inflation' narrative. Bond yields in India and globally moved up - pricing for higher inflation for a longer period and more aggressive central bank action.

But we reached the peak of inflation scare by the middle of the month. In the second half, the pendulum swung towards the 'recession' narrative. Markets started pricing for a contraction in the economic activity across many advanced economies.

The US 10 treasury started acting like a haven asset as investors rushed to seek protection. Bond yields dropped; prices jumped.

The US 10-year treasury yield peaked at 3.47% on June 14, 2022, a day before the US Federal Reserve hiked the Fed Funds rate by 75 basis points. It fell to 3.01% by June 30, 2022. At the time of writing this report on July 6, 2022, the 10-year US treasury note is trading at a yield of 2.81%.

Indian bond yields followed a similar path as the US treasury yields, though at a slower pace. The 10-year Indian government bond yield peaked at 7.60% on June 13, 2022, and fell back to 7.45% by the month-end. Currently, on July 6, 2022, the 10-year Indian government bond is trading at a yield of 7.30%.

Commodity prices also came off from its April-May 2022 peak in fear of economic contraction and demand destruction. As of July 5, 2022, most of the metal commodities are down by 10%-20% since the end of May 2022. Many of the Agricultural commodities have also come off by 5%-20% during this period.

From India's perspective, the most notable is the decline in crude oil, palm oil, and wheat prices which fell by 14%, 37%, and 23% respectively in one month period ending July 5, 2022. These were major contributors to domestic inflation on the way up. So, this drop in prices should ease some of the inflationary concerns.

From the bond market's perspective, the tussle between the two narratives of Inflation and Recession in the US will continue to shape market expectations. If indeed the economic activity decline at an accelerated pace and the US economy gets into serious contraction - the US Fed may slow down the pace of rate hikes, global commodity prices will soften and bond yields will come down further.

However, if this economic slowdown is not that serious, central banks will continue to focus on the inflation problem and rate hikes may continue.

Although we expect the global economy to slow down due to high inflation and synchronized global monetary policy tightening, it may not fall into recession as quickly as expected.

Employment numbers in the US are fairly strong, incomes are still growing at a healthy pace and there is a saving buffer available to spend. Corporate sector balance sheets carry lesser debt and are stronger than before.

QUANTUM'S VIEW FOR JUNE 2022

We may possibly see a slowdown in the demand for goods and consequently in the manufacturing activity; while demand for services like travel, recreation, etc. picks up due to the removal of pandemic-related restrictions.

We do not see any material change in the FED's policy direction and its commentary in the upcoming monetary policy on July 27, 2022. It will likely hike the Fed Funds rate by another 50 or 75 basis points as was guided earlier. Thus, we see the recent move down in the US treasury yields as a temporary retracement and expect it to rebound over the coming months.

For the Indian bond market, local inflation and demand-supply dynamics will likely have a greater influence. A drop in commodity prices should help in easing some of the inflationary concerns. But it may not be enough to have any material impact on the RBI's policy direction and its pace, as yet.

We expect another 35-50 basis points of a rate hike in the August meeting of the RBI's monetary policy committee. The RBI may continue with the rate hikes in the remaining MPC meetings in 2022. However, the pace of rate hikes (quantum of hike in each policy) may slow down after the pandemic time ultra-accommodative monetary policy is reversed. Overall, we expect the repo rate to peak around 6% by early 2023.

Since bond yields have come down sharply over the past two weeks, there is a possibility of a reversal in the near term.

From a medium-term perspective, most of the potential rate hikes are already priced in the current bond valuations. Thus, the bond market may not be too sensitive to RBI's rate hikes going forward.

However, the adverse demand-supply gap will continue to put upward pressure on the longer maturity bonds. We continue to like the 3-5 years segment of the bond market, which in our opinion, offers the critical balance between the accrual (interest income) and duration (price changes). At this stage, our priority is to have higher accrual with a lower duration.

From an investor's perspective, the return potential of liquid and debt funds has improved significantly after the sharp jump in bond yields over the last 12 months. The gap between the bank savings rates and liquid fund returns will widen further and remain attractive for your surplus funds. Investors with a short holding period and low-risk appetite should stick to categories like liquid funds of good credit quality portfolios

Medium to Long term interest rates in the bond markets are already at long-term averages as compared to fixed deposits which remain low. Investors with more than 2-3 years holding period can consider dynamic bond funds which have the flexibility to change the portfolio positioning as per the evolving market conditions. However, such investors should be ready to tolerate some intermittent volatility.

Gold Outlook by

Chirag Mehta

Chief Investment Officer

Ghazal Jain

Associate Fund Manager -
Alternative Investment

June was quite volatile with the push and pull of macroeconomic factors driving the prices of all asset classes. International gold prices fell by -1.6% m/m to close at \$1,807 but held above \$1,800 throughout the month on the back of macroeconomic and geopolitical uncertainty. The prices touched a high of \$1,879 in the middle of the month after a knee-jerk reaction to the unexpectedly high US CPI numbers that touched 8.6% y/y in May. This was the third consecutive month where the inflation was more than 8% and the 15th month where the inflation numbers have stayed significantly above the threshold of the Fed's 2% target rate. With inflation running high, investors started anticipating a faster pace of liquidity tightening and rate hikes which caused a swift correction in gold prices to \$1,800 levels.

In the June FOMC meeting, the Federal Reserve increased the Fed funds rate by 75 bps to 1.5%, the largest increase in 28 years. The Fed Chair further indicated that there would be rate hikes of equal quantum, if necessary, to curb the rising inflation. This drastically changed the interest rate projections. Before the Fed meeting, February 2023 Fed Funds rates were projected to be less than 3%, which went up to 3.45% after the FOMC statement.

The aggressive tightening of the monetary policy led to a marginal fall in gold prices. However, the drawdown in the asset prices was more pronounced in equities and bonds. The S&P 500 fell by more than 9% last month taking the YTD fall to more than 20%, which is regarded as a bear market territory. On the other hand, a heavy selloff in the bond market was visible with the US 10Y nominal yield nearing 3.5% during mid-June, the highest after 2011. This led to the US 10Y TIPS yield touching 0.89%, the highest since February 2019. The rising yields propelled the flight of money to the US Dollar. The DXY, an index that compares the US dollar with a basket of currencies, jumped to a 20-year high of 105. A stronger dollar and positive real yields had a bearing on gold prices. However, the downside was capped because of risk aversion and a selloff in equities, persistent price pressures, and the geopolitical risk premium due to the Russia-Ukraine war.

That said, after the Fed's extreme hawkish commentary, the recessionary concerns kicked in as investors feared the rate hikes could crash land the economy. The concern was evident in oil prices, which corrected by 6% in a month. Overall commodity prices also fell in June with the CRB Commodity index falling by 7% in a month. Fears of a slowdown were also reflected in the cooling of inflation expectations in the US and investors rushing into Treasury bonds. US 10Y nominal yield and US 10Y TIPS yield ended the month lower at 3.10% and 0.74% respectively.

Looking ahead, we expect gold prices to be rangebound and volatile in the short term as top central banks prioritize fighting inflation over growth, with another 75 bps rate hike expected in the US in July. However, in the medium to long

QUANTUM'S VIEW FOR JUNE 2022

term, we expect significant tailwinds to the gold price given that the global economic growth is expected to slow down meaningfully. The IMF has slashed the US GDP growth forecast to 2.9% from 3.7% in 2022. And when the US sneezes, the rest of the world catches a cold. An economic slowdown might compel the Central Banks, especially the Fed, to cut interest rates or reduce the quantum of hikes and abandon balance sheet reduction i.e pulling out liquidity. This would be a pivot from the current aggressiveness, pushing gold prices up. But given that the price increases are caused due to external shocks, there may be limits to monetary policy's effectiveness. There is a likelihood that the global economy could enter several years of above-average inflation and below-average growth. This stagflationary environment, if materialised, will have destabilizing consequences for the global economy and markets, supporting investment demand for gold.

On the domestic front, INR depreciated by nearly 2% last month supporting the rupee gold price. Gold in the domestic market was flat m/m but up by 5% YTD. This is a massive outperformance compared to Nifty which is down 9% YTD. The positive sentiment with regard to gold was visible in ETF flows which were robust in May. While there was a net outflow globally, Indian gold ETFs recorded a net inflow of 200 crores in May countering global trends. Moving into July, the basic import duty on gold was hiked from 7.5% to 12.5% in a bid to temper imports of the metal. The immediate result of this move would be higher domestic prices.

Gold demand as an investment is gaining traction lately given investors have realised the relevance of holding gold in the portfolio in uncertain and volatile times. The benefit of currency depreciation along with the strong fundamentals of gold make it an excellent portfolio component to withstand volatility in the equity and bond markets, as well as whatever surprises are in store for the global economy going forward. Moreover, with efficient and convenient products such as Gold ETFs, it becomes easier to gain exposure to this important element of any Indian investor portfolio.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Long Term Equity Value Fund - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments. ^{##}As TRI data is not available since inception of the scheme, Tier II benchmark performance is calculated using composite CAGR S&P BSE 200 index PRI Value from March 13, 2006 to July 31, 2006 and TRI Value since August 1, 2006. Refer to the section "GIPS Compliance" on Page no. 13 for GIPS related disclosure. Returns are net of total expenses

[#]S&P BSE 500 TRI, ^{##}S&P BSE 200 TRI, ^{###}S&P BSE Sensex.

Exit Load:

Provisions	% of Exit Load
10% of units if redeemed or switched out during exit load period i.e. 730 days from the allotment Exit Load Period : 730 days from the date of allotment	NIL
Remaining 90% of units in parts or full :	
(i) if redeemed or switched out on or before 365 days from the date of allotment	2%
(ii) if redeemed or switched out on or after 365 days but before 730 days from the date of allotment	1%
If units redeemed or switched out after 730 days from the date of allotment	NIL

Note: Redemptions / Switch outs of units will be done on First In First Out (FIFO) basis. The above mentioned Exit Load shall be equally applicable to the special products such as Systematic Withdrawal Plan (SWP)/Systematic Transfer Plan (STP) and Switches etc. However, no load shall be charged for switching in between option / plan within the scheme.

Mr. Sorbh Gupta and Mr. George Thomas manage 2 scheme of the Quantum Mutual Fund.

Product Labeling

Name of the Scheme & Tier I Benchmark	This product is suitable for investors who are seeking*	Risk-o-meter of Scheme	Tier I Benchmark	Tier II Benchmark
Quantum Long Term Equity Value Fund (An Open Ended Equity Scheme following a Value Investment Strategy) Tier I Benchmark: S&P BSE 500 TRI	<ul style="list-style-type: none"> Long term capital appreciation Invests primarily in equity and equity related securities of companies in S&P BSE 200 index. 	 <p>Investors understand that their principal will be at Very High Risk</p>		

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

The Risk Level of the Scheme in scheme Risk O Meter is basis it's portfolio as on June 30, 2022.

The Risk Level of the Tier I Benchmark & Tier II Benchmark in the Risk O Meter is basis it's constituents as on June 30, 2022.

^^ Note:

Risk Free Rate assumed to be 4.95% (FBIL Overnight MIBOR for 30th June 2022) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.

QUANTUM TAX SAVING FUND

An Open Ended Equity Linked Saving Scheme with a Statutory Lock in of 3 years and Tax Benefit

Investment Objective

To achieve long-term capital appreciation by investing primarily in shares of companies that will typically be included in the S&P BSE 200 Index and are in a position to benefit from the anticipated growth and development of the Indian economy and its markets.

Mr. Sorbh Gupta and Mr. George Thomas manage 2 Schemes of Quantum Mutual Fund.

Product Labeling

Name of the Scheme & Tier I Benchmark	This product is suitable for investors who are seeking*	Risk-o-meter of Scheme	Tier I Benchmark	Tier II Benchmark
Quantum Tax Saving Fund (An Open Ended Equity Linked Saving Scheme with a Statutory Lock in of 3 years and Tax Benefit) Tier I Benchmark: S&P BSE 500 TRI	<ul style="list-style-type: none"> Long term capital appreciation Invests primarily in equity and equity related securities of companies in S&P BSE 200 index and to save tax u/s 80 C of the Income Tax Act. Investments in this product are subject to lock in period of 3 years. 	 <p>Investors understand that their principal will be at Very High Risk</p>		

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

The Risk Level of the Scheme in scheme Risk O Meter is basis it's portfolio as on June 30, 2022.

The Risk Level of the Tier I Benchmark & Tier II Benchmark in the Risk O Meter is basis it's constituents as on June 30, 2022.

^^ Note:

Risk Free Rate assumed to be 4.95% (FBIL Overnight MIBOR for 30th June 2022) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.

QUANTUM EQUITY FUND OF FUNDS

An Open Ended Fund of Funds scheme
Investing in Open Ended Diversified
Equity Schemes of Mutual Funds

Investment Objective

The investment objective of the scheme is to generate long-term capital appreciation by investing in a portfolio of open-ended diversified equity schemes of mutual funds registered with SEBI. There can be no assurance of positive returns from following the stated investment strategy.

Achieve optimal equity diversification with QEFOF

**Please note the above is a suggested fund allocation and not to be considered as an investment advice or recommendation.*

[#]S&P BSE 200 TRI, ^{##}S&P BSE Sensex TRI.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Equity Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses

Exit Load:

Provisions	% of Exit Load
10% of units if redeemed or switched out on or before 365 days from the date of allotment	NIL

#The mentioned Tax Rates shall be increased by applicable surcharge, If any, Health and Education Cess @ 4% where ever as applicable.
Equity oriented schemes will also attract Securities Transaction Tax (STT) @ 0.001% at the time of redemption and switch to other schemes.
The Schemes which are selected for investments in QEFOF based on QIS / PFN Research.
Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899
TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the Regular Plan.

^^ Note:

Risk Free Rate assumed to be 4.95% (FBIL Overnight MIBOR for 30th June 2022) for calculating Sharpe Ratio.
Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.
Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.
Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

QUANTUM INDIA ESG EQUITY FUND

An Open ended equity scheme investing in companies following Environment, Social and Governance (ESG) theme

Investment Objective

To achieve long-term capital appreciation by investing in share of companies that meet Quantum's Environment, Social and Governance (ESG) criteria.

The sustainability objectives of the ESG strategy are:

- Achieving positive and above-average ESG profile
- Mitigating ESG risks and harnessing ESG opportunities, and
- Influencing overall positive behavior by investing in companies that promote sustainable products and services.

Invest in an ESG fund which is true to label

**Please note the above is a suggested fund allocation and not to be considered as an investment advice or recommendation.*

Returns are net of total expenses and are calculated on the basis of Compounded Annualized Growth Rate (CAGR)

Regular Plan was launched on 1st April 2017. 5 year Returns of Regular Plan have been calculated considering the NAV of 1st April, 2017.

SIP Performance as on June 30, 2022

	Total Amount Invested (₹ '000)	Mkt Value as on June 30, 22 (₹ '000)	Tier I - Benchmark [#] Returns (₹'000)	Additional Benchmark Returns (₹'000) ^{##}	Returns (XIRR*) (%)	Tier I - Benchmark [#] Returns (%)	Additional Benchmark Returns (%) ^{##}
SIP Since Inception	350.00	424.23	425.39	422.99	13.42%	13.61%	13.21%
1 Year SIP	120.00	108.87	108.23	112.53	-17.20%	-18.15%	-11.66%

[#]NIFTY100 ESG TRI, ^{##}S&P BSE Sensex TRI.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum India ESG Equity Fund - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP.

Returns are net of total expenses

*XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Exit Load:

Provisions	% of Exit Load
10% of units If redeemed or switched out on or before 365 days from the date of allotment	NIL
Remaining 90% of units if redeemed or switched out on or before 365 days from the date of allotment	1%
If redeemed or switched out on or after 365 days from the date of allotment	NIL

Note: Redemptions / Switch outs of units will be done on First In First Out (FIFO) basis. The above mentioned load structure shall be equally applicable to the special facilities such as Systematic Withdrawal Plan (SWP) / Systematic Transfer Plan (STP) and Switches etc. However, no load shall be charged for switching between option / plan within the Scheme.

1 Year SIP	120.00	123.84	124.39	117.34	6.16%	7.07%	-4.20%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Gold Savings Fund - Direct plan - Growth option. Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses.

QUANTUM MULTI ASSET FUND OF FUNDS

An Open Ended Fund of Funds Scheme
Investing in schemes of Quantum
Mutual Fund

Investment Objective

The investment objective of the Scheme is to generate modest capital appreciation while trying to reduce risk (by diversifying risks across asset classes) from a combined portfolio of equity, debt / money markets and Gold schemes of Quantum Mutual Fund. The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise/ that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. There can be no assurance that the investment objective of the Scheme will be realized.

1 Year SIP	120.00	119.02	118.42	112.53	-1.55%	-2.50%	-11.66%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Multi Asset Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years and since Inception.

Returns are net of total expenses

Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899
TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the regular plan

^^ Note:

Risk Free Rate assumed to be 4.95% (FBIL Overnight MIBOR for 30th June 2022) for calculating Sharpe Ratio.
Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that these security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

QUANTUM GOLD FUND

An Open Ended Scheme Replicating/
Tracking Gold

Investment Objective

To generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold.

Now start small to build your gold allocation with QGF

**Please note the above is a suggested fund allocation and not to be considered as an investment advice or recommendation.*

Tracking Error is calculated on Annualised basis using 3 years history of daily returns.

Definitions

Tracking Error: is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better

***Portfolio Turnover** Ratio is the percentage of a funds assets that have changed over the course of a year

QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Erstwhile name of the scheme has been changed from Quantum Nifty ETF to Quantum Nifty 50 ETF w.e.f February 1st, 2022.

Investment Objective

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error.

★ Scheme Features

Fund Manager

Mr. Hitendra Parekh

Work experience: 29.5 years. He has been managing this fund since July 10, 2008

Tier I - Benchmark Index	Nifty 50 - Total Return Index	

*Investors should consult their financial advisors if in doubt about whether the product is suitable for them.

HOW TO READ FACTSHEET

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹ 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1%, the investor will enter the fund at ₹ 101.

Note

SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹ 100 and the exit load is 1%, the redemption price would be ₹ 99 Per Unit.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
