^^Standard Deviation: 12.88% Beta: 0.90 Sharpe Ratio: 0.48

Past performance may or may not be sustained in the future. Scheme performance has been calculated using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day)), the 1 year, 3 years, 5 years, 7 years, and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Portfolio Turnover Ratio (Last one year): 16.94%

Industry Allocation (% of Net Assets) as on December 31, 2017

^^ Note:
Risk Free Rate assumed to be 6.20% (FBIL Overnight MIBOR for 31st December 2017) for calculating Sharpe Ratio.
Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions
Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.
Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that thesecurity will be less volatile than the market.
A beta of greater than 1 indicates that the security's price will be more volatile than the market.
Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.
Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.
