QUANTUM'S VIEW FOR OCTOBER 2022

EQUITY OUTLOOK BY

George Thomas

Associate Fund Manager,
Equity

The S&P BSE SENSEX advanced by 5.8% on a total return basis in the month of Oct 2022 while S&P BSE Midcap Index & S&P BSE Small cap Index advanced by 2.0% and 1.3% respectively. Most of the sectoral indices gained during the month. Banks, Capital goods, and Tech indices recorded relatively higher growth. Advance in Banks was fuelled by stable asset quality trends and the persistence of high credit growth along with improving interest margins. IT companies reported reasonable growth with stable order books despite global uncertainties. Capital goods companies have reported healthy order inflows supported by a pickup in public Capex and are seeing signs of private Capex revival. Healthcare, Consumer Durables, and FMCG indices were laggards during the month. Consumer Durables and FMCG companies' results have been mixed with few companies reporting lower than expected growth.

Though US inflation remains high, US GDP is estimated to be back in the expansion zone in Q3 after two-quarters of contraction. A relief rally was seen in S & P 500 (+8.1%) and Dow Jones Industrial Average Index (+14.1%) during the month. The challenging environment in the majority of emerging markets was reflected in the persistent declining trend in the MSCI EM index (-3.1%).

Amidst rising interest rates in the US, FPIs continued to be sellers in Indian markets to the tune of USD \$0.5 bn. Domestic institutional investors were buyers with purchases worth USD 1.2 bn. Since the start of the calendar year 2022, FPIs have recorded a net outflow of USD 22.3 bn while DIIs recorded a net inflow of USD 33.7 bn.

Quantum Long Term Equity Value Fund (QLTEVF) saw an increase of 4.2% in its NAV in the month of October 2022. This compares to an increase of 4.1% in its Tier I benchmark S&P BSE 500 and a 4.5% increase in its Tier II Benchmark S&P BSE 200. IT, Banks, and PSUs were major contributors to the marginal outperformance. Cash in the scheme stood at approximately 6.4% at the end of the month. The portfolio is valued at 12.2x FY24E consensus earnings vs. the S&P BSE Sensex valuations of 17.0x based on FY24E consensus earnings.

India's Relative Outperformance is supported by robust earnings growth:

Source: Bloomberg; EPS is rebased to 100 as of Mar-2019; EPS (Left Axis), PE (Right Axis).
Past performance may or may not be sustained in the future.

QUANTUM'S VIEW FOR OCTOBER 2022

Indian markets have outperformed global peers by a wide margin over the current year. The bar graph on the above chart shows the PE ratio of India and global indices (S&P 500: US, MSCI EM: Emerging Market) from pre-pandemic levels. The line graph shows the earnings per share of indices from Mar-19 till Sep-22. As can be seen from the graph, the recovery post covid has been sharpest in India compared to global markets justifying the premium valuation compared to global peers.

Though the co-ordinated global interest rate hikes could pose pressure on foreign flows and exports, domestic indicators look reasonable:

- Consumer sentiment indicated by CMIE's "Index of Consumer Sentiments (ICS)" rose sequentially by 7.6% and 3.5% for urban and rural regions respectively during October.
- Credit growth continues to be at a strong pace. Outstanding credit of Scheduled Commercial Banks under Non-food credit recorded a healthy growth of 16.8% in September. Retail recorded a superior growth of 19.6% while Industrial credit saw a growth of 12.6%.
- GST collections stood at a healthy level of INR 1.51 tn in October. GST collection above INR 1.4 tn for 8 successive months indicates the persistence of the formalisation trend in the economy.
- PMI - Manufacturing and PMI - Services stood at 55.3 and 55.1 respectively (A reading above 50 indicates expansion) in October.
- Domestic auto sales continued its growth momentum in the festive month of October. Passenger Vehicle and premium segments reported superior growth.

Notwithstanding the encouraging domestic environment, markets are likely to be volatile in the near term due to global uncertainties and interest rate hikes across the globe. Equities remain the optimal asset class to beat inflation over the long term. We recommend investors remain invested in equities and make incremental allocations in a staggered manner to benefit from the current volatility.

DEBT OUTLOOK BY

Pankaj Pathak

Fund Manager,
Fixed Income

The bond market was range bound in October 2022. The 10-year maturity government bond was (Gsec) trading between a broad range of 7.35% and 7.55%. On a monthly closing basis, the 10-year Gsec settled 5 basis points higher at 7.45% on October 31, 2022, versus 7.40% on September 30, 2022. In 2022 so far, the 10-year yield has moved up 100 basis points.

Money market rates continued to move higher with 3 months' treasury bill moving up by 35 basis points during the month from 6.09% on September 30, 2022, to 6.44% on October 31, 2022. In 2022 so far, the 3-month treasury bill yield is up 280 basis points.

Liquidity conditions continued to tighten due to increased cash withdrawals and forex sale by the RBI. Liquidity surplus in the banking system as measured by banks' net lending or borrowing under the RBI's liquidity adjustment facility (Repo, SDF, MSF, etc.), declined from an average of ~Rs. 760 billion during September to an average of ~Rs. 35 billion in October 2022. It was around Rs. 7 trillion at the start of the year.

The global market's volatility increased further during October as bond yields across developed markets moved up sharply by the middle of the month and retraced back partially by the month end. The 10-year US treasury yield shoot up from 3.83% to 4.24% and then fell back to close the month at 4.04%. Similarly, the 10-year German bund yield jumped from 2.1% to 2.41% and then fell back to 2.14% by the October end.

In the United Kingdom, the bond market (Gilt) continued to witness extreme volatility since the controversial tax cut proposal by the UK government in September. Long-term gilt yields had shot more than 130 basis points in a matter of 7 days. It triggered a panic selling by pension funds due to large losses on their leveraged positions and forced the Bank of England to announce bond buying to cool off the market.

Later, in October, the government withdrew the tax cut proposal and instead announce a further tightening of fiscal policy. Following all the policy flip-flops, the 10-year gilt yield first jumped from 3.2% on September 19, 2022, to 4.5% by mid-October and then fell back down to 3.5% by end of the month.

Turbulence in the gilt market was though started by a bad fiscal policy, the market reaction was compounded due to a lack of market liquidity and investors' nervousness given the fast pace of rate hikes around the developed world.

Investors have been complaining of a similar lack of liquidity in the US treasury markets. In Japan also trading dried up completely in the 10-year benchmark bond for four consecutive sessions.

With these incidents, financial stability concerns have resurfaced. There is a worry that the fast pace of rate hikes in the developed world would further deteriorate the liquidity in the financial market.

In India, the RBI followed the expected path and delivered another rate hike of 50 basis points on September 30, 2022.

This took the Repo rate to 5.9% and the SDF rate to 5.65%. Since April this year, the RBI has frontloaded the monetary policy tightening with - (a) 190 basis points increase in the repo rate; (b) 230 basis points increase in the floor policy rate (Reverse Repo/SDF), and (c) reduction in core liquidity surplus by around Rs. 7 trillion.

The impact of these rate hikes and liquidity tightening will be seen in the real economy over the next 3-4 quarters. Given the significant frontloaded tightening in monetary policy and the fragility of economic growth, there is a case for the RBI to slow down or even pause.

Some of the MPC (monetary policy committee) members also presented a case for the RBI to adopt a more calibrated approach going forward and warned of the harmful effects of overtightening in an environment where the growth outlook is very fragile.

In our opinion, the RBI will be more data-dependent and will likely slow down the pace of tightening. The Repo rate may peak somewhere between 6.0%-6.5%.

The bond market is already pricing for a terminal repo rate of 6.5%. So, another 25-50 basis points repo rate hike will not impact market prices in any material way.

We believe, the peak of central banks' hawkishness is now behind us. It is a time we should look beyond the market noises and spot the emerging opportunities in the bond market.

After the recent sell-off, bond valuations have improved. Currently, the 3-5 years government bonds are trading at a yield of between 7.30%-7.45%. This is more than 140 basis points above the repo rate of 5.9%. The long-term average of this spread in a tightening interest rate environment is around 80-90 basis points.

As the monetary policy stabilises, the yield spread between long-term bonds and the repo rate should compress. So, we see limited upside on yields from here. Even in terms of real interest rates, the entire bond yield curve is now trading at a yield above the expected CPI inflation.

We expect bond yields to move sideways in a tight range with the 10-year G-sec yield trading between 7.2%-7.6%. While Short term money market rates will move higher along with the policy repo rate.

Considering the duration-accrual balance, the 3-5-year segment remains the best play as core portfolio allocation.

However, valuation at the longer end bonds up to 10 years have also turned attractive after the recent sell-off.

We suggest investors with a 2-3 years holding period should consider adding their allocation to dynamic bond funds to benefit from higher yields on medium to long-term bonds.

Dynamic bond funds have the flexibility to change the portfolio positioning as per the evolving market conditions. This makes dynamic bond funds better suited for long-term investors in this volatile macro environment.

Investors with shorter investment horizons and low-risk appetite should stick with liquid funds. With the increase in short-term interest rates, we should expect further improvement in potential returns from investments in liquid funds going forward.

Since the interest rate on bank saving accounts are not likely to increase quickly while the returns from the liquid fund are already seeing an increase, investing in liquid funds looks more attractive for your surplus funds.

Investors with a short-term investment horizon and with little desire to take risks should invest in liquid funds which own government securities and do not invest in private sector companies which carry lower liquidity and higher risk of capital loss in case of default.

Gold Outlook by

Chirag Mehta

Chief Investment Officer

Ghazal Jain

Fund Manager -
Alternative Investment

Even as international gold prices moved between \$1,620 and \$1,720 per ounce in October, gold bears outpaced gold bulls, bringing prices down by 2%, and ending the month close to \$1,638 per ounce. This rangebound movement was a result of markets digesting elevated inflation prints and pricing in outsized interest rate hikes in developed economies, despite the macroeconomic and geopolitical outlook remaining extraordinarily uncertain and keeping gold relevant.

Domestic gold prices ended the month only 0.7% lower supported by a depreciating rupee and festive demand on Diwali and Dhanteras.

The fall in gold prices was a result of higher-than-expected September readings of US Consumer Price Inflation (CPI) and US Core Personal Consumption Expenditure (Core PCE) at 8.2% and 5.1% respectively, which increased investor anticipation of aggressive policy moves by the US central bank. This led to US treasury yields inching higher and taking a toll on gold. Benchmark US 10Y bond yields jumped up to 4.3% at one point, the highest since 2007 before retreating to 4% levels by the end of the month. Gold's other driver, the US dollar also went through its fair share of volatility reacting to alternating hawkish and dovish Fed bets and tightening by Bank of England and ECB which reduced its attractiveness, before ending the month marginally lower, but still at 20-year highs.

Gold is entering November expecting the Fed's fourth consecutive 75 basis point hike, as the latest data from the US economy shows that consumer spending, job openings, wage growth, and inflation expectations haven't cooled off as much as the Fed would like. Monetary policy tightening for the next couple of months, with markets expecting the Fed terminal rate to be 4.75-5%, would thus keep the pressure on gold prices, capping the upside.

But the perception that the US economy is holding up well despite the 300 basis points of interest rate hikes in 2022 may not be accurate. That's because policy moves usually take about two-three quarters to work their way through the economy. Although the Q3 US GDP growth came in positive at 2.6%, an in-depth reading of the number shows that it was driven by the higher value of exports, which in turn was driven by a stronger dollar. Data from previous recessions shows that it isn't uncommon to have a positive GDP quarter within a recession. In addition to the 10y-2y and 30y-5y spreads which have been mostly negative since April, other closely watched spreads in the Treasury market like 10y-3m and 18m-3m have also either flipped below zero or are about to, spurring fresh warnings that a recession is inevitable. US manufacturing barely expanded in October with the S&P Global US Manufacturing PMI data falling to 50.4, down from September's reading of 52.

In response to the Federal Reserve's aggressive rate hikes, 30-year mortgage rates in the US have surpassed 7% for the

QUANTUM'S VIEW FOR OCTOBER 2022

first time in two decades. The higher rates are scaring away buyers and choking the housing market as sales plummet and prices decelerate. The question now is whether the fast-deteriorating housing market will be the first to break and push the US into recession just like it has in the past.

While inflation is looking persistent, the Fed's willingness to fight it may not be. Given that gold registered a seventh consecutive monthly decline in October, current prices can be a good entry point for gold investors to capitalize on the upside in prices from the recession, risk aversion, and end-to-rate hikes that are to eventually follow.

Apart from inflation and growth, political considerations and financial stability will also weigh on the Fed's future policy as the American government's debt reached an all-time high of \$31 trillion in October.

Meanwhile, there is no end in sight to the war in Europe. Flare-ups in tensions between the warring nations continue to complicate the global energy supply chain and inflation situation. Russia's latest exit from a deal facilitating grain exports from Ukraine threatens to worsen already severe inflation and deepen a global food crisis. China's zero-covid policy isn't helping either.

Indicative of the prevailing global uncertainty and need for diversification, global central banks bought a record 399 tons of gold (\$20bn) last quarter taking full-year purchases to 673 tons, the highest since 1967. Investors too should acknowledge the risks in the current economic environment and diversify their portfolios with a gold allocation.

Different Plans shall have different expense structure.

Mr. Sorbh Gupta and Mr. George Thomas manage 2 scheme of the Quantum Mutual Fund.

Product Labeling

Name of the Scheme & Tier I Benchmark	This product is suitable for investors who are seeking*	Risk-o-meter of Scheme	Tier I Benchmark	Tier II Benchmark
Quantum Long Term Equity Value Fund (An Open Ended Equity Scheme following a Value Investment Strategy) Tier I Benchmark: S&P BSE 500 TRI	<ul style="list-style-type: none"> Long term capital appreciation Invests primarily in equity and equity related securities of companies in S&P BSE 200 index. 	<p>Investors understand that their principal will be at Very High Risk</p>		

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

The Risk Level of the Scheme in scheme Risk O Meter is basis it's portfolio as on October 31, 2022.

The Risk Level of the Tier I Benchmark & Tier II Benchmark in the Risk O Meter is basis it's constituents as on October 31, 2022.

^^ Note:

Risk Free Rate assumed to be 6.25% (FBIL Overnight MIBOR for 31st October 2022) for calculating Sharpe Ratio.

Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Portfolio Turnover Ratio is the percentage of a funds assets that have changed over the course of a year.

QUANTUM TAX SAVING FUND

An Open Ended Equity Linked Saving Scheme with a Statutory Lock in of 3 years and Tax Benefit

Investment Objective

To achieve long-term capital appreciation by investing primarily in shares of companies that will typically be included in the S&P BSE 200 Index and are in a position to benefit from the anticipated growth and development of the Indian economy and its markets.

SIP Performance as on October 31, 2022

	Total Amount Invested (₹ '000)	Mkt Value as on Oct 31, 22 (₹ '000)	Tier I - Benchmark# Returns (₹ '000)	Tier II - Benchmark### Returns (₹ '000)	Additional Benchmark Returns (₹ '000)###	Returns (XIRR*) (%)	Tier I - Benchmark# Returns (%)	Tier II - Benchmark### Returns (%)	Additional Benchmark Returns (%)###
SIP Since Inception	1,660	4,307	4,768	4,769	4,595	12.84%	14.14%	14.14%	13.67%
10 Years SIP	1,200	2,257	2,609	2,606	2,539	12.16%	14.88%	14.85%	14.37%
7 Years SIP	840	1,286	1,468	1,471	1,468	11.99%	15.72%	15.77%	15.72%
5 Years SIP	600	841	918	916	904	13.53%	17.09%	17.03%	16.46%
3 Years SIP	360	476	493	490	478	19.08%	21.66%	21.24%	19.50%
1 Year SIP	120	127	127	128	128	11.86%	11.86%	12.66%	13.52%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Tax Saving Fund - Direct plan - Growth option. Scheme performance has been calculated using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years, and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses

#S&P BSE 200 TRI, ##S&P BSE Sensex TRI.

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Equity Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses

#The mentioned Tax Rates shall be increased by applicable surcharge, If any, Health and Education Cess @ 4% where ever as applicable.
 Equity oriented schemes will also attract Securities Transaction Tax (STT) @ 0.001% at the time of redemption and switch to other schemes.
 The Schemes which are selected for investments in QEFOF based on QIS / PFN Research.
 Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899
TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the Regular Plan.

^^ Note:

Risk Free Rate assumed to be 6.25% (FBIL Overnight MIBOR for 31st October 2022) for calculating Sharpe Ratio.
 Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

QUANTUM INDIA ESG EQUITY FUND

An Open ended equity scheme investing in companies following Environment, Social and Governance (ESG) theme

Investment Objective

To achieve long-term capital appreciation by investing in share of companies that meet Quantum's Environment, Social and Governance (ESG) criteria.

The sustainability objectives of the ESG strategy are:

- Achieving positive and above-average ESG profile
- Mitigating ESG risks and harnessing ESG opportunities, and
- Influencing overall positive behavior by investing in companies that promote sustainable products and services.

Invest in an ESG fund which is true to label

*Please note the above is a suggested fund allocation and not to be considered as an investment advice or recommendation.

1 Year SIP	120	119	119	120	-1.54%	-2.03%	0.60%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Gold Savings Fund - Direct plan - Growth option. Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years, 10 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years, 10 years and since Inception. *XIRR - XIRR calculates the internal rate of return to measure and compare the profitability of series of investments.

Returns are net of total expenses.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

QUANTUM MULTI ASSET FUND OF FUNDS

An Open Ended Fund of Funds Scheme
Investing in schemes of Quantum
Mutual Fund

Investment Objective

The investment objective of the Scheme is to generate modest capital appreciation while trying to reduce risk (by diversifying risks across asset classes) from a combined portfolio of equity, debt / money markets and Gold schemes of Quantum Mutual Fund. The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise/ that prevent the Scheme from increasing investments in the schemes of Quantum Mutual Fund. There can be no assurance that the investment objective of the Scheme will be realized.

3 Year SIP	360	409	421	478	8.49%	10.50%	19.50%
1 Year SIP	120	124	125	128	6.64%	7.73%	13.52%

Past performance may or may not be sustained in the future. The above SIP performance is for Quantum Multi Asset Fund of Funds - Direct plan - Growth option. Load is not taken into consideration using applicable NAV on the SIP day (5th of every month). Return on SIP and Benchmark are annualized and compounded investment return for cash flows resulting out of uniform and regular monthly subscriptions as on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day) and have been worked out using the Excel spreadsheet function known as XIRR. XIRR calculates the internal rate of return for series of cash flow. Assuming ₹ 10,000 invested every month on 5th day of every month (in case 5th is a non-Business Day, then the next Business Day), the 1 year, 3 years, 5 years, 7 years and since inception returns from SIP are annualized and compounded investment return computed on the assumption that SIP installments were received across the time periods from the start date of SIP from the end of the relevant period viz. 1 year, 3 years, 5 years, 7 years and since Inception.

Returns are net of total expenses

 Equity oriented schemes will also attract Securities Transaction Tax (STT) @ 0.001% at the time of redemption and switch to other schemes.
 Stamp Duty applicable on Investors subscription unit transactions including Switch in as per the rate mentioned in the Amendments to Indian Stamp Act,1899
TRANSACTION CHARGES: No Transaction Charges shall be deducted from the investment amount for applications received in the regular plan

^^ Note:

Risk Free Rate assumed to be 6.25% (FBIL Overnight MIBOR for 31st October 2022) for calculating Sharpe Ratio.
 Standard Deviation, Sharpe Ratio & Beta are calculated on Annualised basis using 3 years history of monthly returns.

Definitions

Standard deviation measures historical volatility. A high standard deviation suggests high volatility, while lower standard deviation would refer to more stability.

Beta is the tendency of a fund's returns to respond to market swings. A beta of 1 indicates that the fund price will move with the market. A beta of less than 1 means that these security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market.

Sharpe Ratio is used to characterise how well the return of an asset compensates the investor for the risk taken. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

QUANTUM NIFTY 50 ETF FUND OF FUND

^^ Note: Tracking Error is calculated on Annualised basis using 3 years history of daily returns.

Definitions

Tracking Error is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better.

Investors in the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of other schemes in which Fund of Funds scheme makes investment (subject to regulatory limits).

QUANTUM GOLD FUND

An Open Ended Scheme Replicating/ Tracking Gold

Investment Objective

To generate returns that are in line with the performance of gold and gold related instruments subject to tracking errors. However, investment in gold related instruments will be made if and when SEBI permits mutual funds to invest, in gold related instruments. The Scheme is designed to provide returns that before expenses, closely correspond to the returns provided by gold.

Now start small to build your gold allocation with QGF

*Please note the above is a suggested fund allocation and not to be considered as an investment advice or recommendation.

Tracking Error is calculated on Annualised basis using 3 years history of daily returns.

Definitions

Tracking Error: is a measure of how closely a fund follows the index to which it is benchmarked. The more passively the fund is managed, the smaller the tracking error. In the case of Exchange Traded Funds, the lower the Tracking Error, the better

***Portfolio Turnover** Ratio is the percentage of a funds assets that have changed over the course of a year

QUANTUM NIFTY 50 ETF

An Open Ended Scheme Replicating / Tracking Nifty 50 Index

Erstwhile name of the scheme has been changed from Quantum Nifty ETF to Quantum Nifty 50 ETF w.e.f February 1st, 2022.

Investment Objective

The investment objective of the scheme is to invest in stocks of companies comprising Nifty 50 Index and endeavor to achieve return equivalent to Nifty by "Passive" investment. The Scheme will be managed by replicating the index in the same weightage as in the Nifty 50 Index with the intention of minimizing the performance differences between the scheme and the Nifty 50 Index in capital terms, subject to market liquidity, costs of trading, managing expenses and other factors which may cause tracking error.

HOW TO READ FACTSHEET

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹ 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1%, the investor will enter the fund at ₹ 101.

Note

SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹ 100 and the exit load is 1%, the redemption price would be ₹ 99 Per Unit.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

STATUTORY DETAILS & RISK FACTORS
