^{*}As the scheme invests 95% to 100% of the net assets into the units of Quantum Gold Fund, the scheme will, by and large, be passively managed Scheme.

It may be clearly understood that the percentages above are only indicative and not absolute.

The Scheme would invest in money market instruments, short-term corporate debt securities, TRI-Party Repo and units of debt and liquid schemes of mutual funds, in order to meet the liquidity requirements of the Scheme.

Investment Strategy

Investment Strategy / Philosophy

The AMC uses 'passive' approach to try and achieve the Scheme's investment objective. The Scheme would predominantly invest in the units of Quantum Gold Fund. The AMC does not make any judgments about the investment merit of a Quantum Gold Fund nor will it attempt to apply any economic, financial or market analysis. Passive approach eliminates active management risks in regards to over / underperformance vis-àvis the benchmark.

The Scheme will buy / sell units from the underlying scheme i.e. Quantum Gold ETF in Creation of Unit Size or through the secondary market through stock exchange route to achieve the investment objectives. The Scheme would endeavor to stay invested in the underlying scheme practically to the maximum extent possible at all times. However, the Scheme would also maintain some funds for meeting expenses and redemption purposes, in order to meet the liquidity requirements of the Scheme as prescribed in the Asset Allocation.

Quantum Gold Fund which is the underlying investment of this Scheme endeavors to track domestic prices of gold by investments in physical gold. It is also a passively managed scheme. On an average the Quantum Gold Fund has been 99.99% invested in gold since its inception in February 2008. This track record in terms of the investment allocation to physical gold evidences the extent to which the fund attempts to track the underlying.

Tracking error means the variance between returns of the underlying benchmark (Gold ETF units in this case) and the NAV of the Scheme for any given period.

Tracking Error means the extent to which the NAV of the Scheme moves in a manner inconsistent with the movements of the benchmark on any given day or over any given period of time due to any cause or reason whatsoever including but not limited to expenditure incurred by the scheme, dividend payouts if any, whole cash not invested at all times as it may keep a portion of funds in cash to meet redemption etc. Tracking error quantifies how closely a manager's return pattern follows that of a benchmark index, and is defined as the standard deviation of the funds excess return over the underlying / benchmark index return.

Given the structure of Quantum Gold Fund, the AMC expects the tracking error to be lower. The AMC will endeavor to keep the tracking error as low as possible. Under normal circumstances, such tracking errors (with respect to the underlying i.e. Quantum Gold Fund) are not expected to exceed 2% per annum. However this may vary when the markets are very volatile and also when the inflows / outflows in the fund are too excessive.

A tracking error may result due to conditions that are beyond the control of the fund manager:

- (a) The Scheme would buy the underlying units on the exchange platform. The price at which the Scheme buys underlying units and it's NAV (based on London AM fix and RBI reference rate) are likely to be different thereby causing deviation and creating tracking error.
- (b) The underlying units bought will incur a brokerage cost which would again lead to deviation in the Scheme and the underlying NAVs.
- (c) Tracking error would also arise on account of time lag between allotment of NAV to the investor and availability of actual funds for deployment as explained in above para. On account of this time lag, the procurement price of the underlying units would be different than the NAV at which allotment is made leading to tracking errors.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

- The Scheme will invest predominantly in units of Quantum Gold Fund, a mutual fund scheme Replicating / Tracking Gold in the form of Exchange Traded Fund. The Scheme's performance may depend upon the performance of QGF. Any change in the investment policy or the fundamental attributes of QGF could affect the performance of the Scheme. All risks associated with underlying scheme, including performance of their underlying physical gold, asset class risk, passive investment risk, indirect taxation risk, etc., will therefore be applicable in this Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying scheme.
- The Scheme's NAV will react to the Gold price movements and movements in the NAV of Quantum Gold Fund. The factor that may affect the price of Gold, among other things include demand and supply for gold in India and in the global market, Indian and foreign exchange rates, inflation trends, trading in gold as commodity, legal restriction on movement / trade of gold that may be imposed by RBI, Government of India or countries that supply or purchase gold to / from India, trends and restrictions on export / import of gold in and out of India, etc.
- The investors of the scheme will bear dual loads i.e. those of the scheme and those of Quantum Gold Fund. Hence, the investor under the scheme may receive lower pre-tax returns than what they could have received if they had invested directly in underlying scheme in the same proportions.
- Although the units of Quantum Gold Fund are listed on the stock exchange, there can be no assurance that an active secondary market for Quantum Gold Fund will develop or be maintained.
- Trading in units of Quantum Gold Fund on the stock exchanges may be halted because of market conditions or for reasons that in view of stock exchange authorities or SEBI, trading in the units of Quantum Gold Fund is not advisable. In addition, trading of units of Quantum Gold Fund is subject to trading halts caused by extraordinary market volatility and pursuant to circuit filter rules of the stock exchanges and SEBI. There can be no assurance that the requirements of stock exchanges necessary to maintain the listing of the units of Quantum Gold Fund will continue to be met or will remain unchanged.
- The units of Quantum Gold Fund may trade above or below their NAV. The NAV of Quantum Gold Fund will fluctuate with changes in the market value of its holdings. The trading prices of the units of Quantum Gold Fund will fluctuate in accordance with changes in its NAV as well as market supply and demand for the units of Quantum Gold Fund. However, given that units of Quantum Gold Fund can be created and redeemed in Creation Units Size directly with Fund, it is expected that large discounts or premiums to the NAV of Quantum Gold Fund will not sustain due to arbitrage opportunity available.
- Any changes in trading regulations by the stock exchanges or SEBI may affect the ability of market maker to arbitrage resulting into wider premium /discount to NAV of Quantum Gold Fund.

Risk Mitigation Factors

Type of Risks

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (Mutual Funds) Regulations, 1996.

The Fund has identified following Risk and designed Risk Management Strategies which is the part of the Investment Process to manage such risks:-

Risk Mitigation / Risk Management Strategies

	Risk of deviating away from the investment objective	The approach adapted to managing the Scheme would be a passive investment approach. The Scheme endeavors to stay near fully invested at all times.
of tracking gold prices through investments in units of Quantum Gold Fund (ETF)	Brokerage paid for buying units on the exchange may also lead to increase in deviation. To mitigate the same, the Scheme will analyze from time to time different ways of taking exposure to units of Quantum Gold Fund from the perspective of risk and return and decide the same in the best interest of investors. For e.g.: Investing directly with the fund by purchasing and delivering physical gold to create / purchase new units whenever possible will help to avoid payment of any brokerage charges.	
		However, the bid ask spreads in the underlying units and time lag for availability of fund for deployment may lead to small deviations.
	Price risk	Buying / selling on the exchange: On account of the usual bid-ask spread, the Scheme may pay / receive premium / discount while purchasing / selling the underlying units on the exchange. The fair value of the units of the Quantum Gold ETF would be calculated on a real time basis and orders would be placed near the real time fair value to avoid overpaying while purchases or receiving less while selling other than a reasonable bid ask spread.
		Buying / selling directly through the Quantum Gold Fund: There is price risk involved when buying physical gold for purchase of units on account of the possibility of the difference between the purchase price of gold and the gold price computed by the underlying fund for valuation purposes. The Scheme may choose to buy gold by placing the order to buy at London AM Fixing price which is used for valuation for the underlying fund and thereby avoid price risk to a greater extent.
		In case of redeeming units directly with the fund, the fund would deliver gold on a T+1 basis which causes time lag and also the same would have to be sold on the open market which can be at a premium / discount. However, the Scheme would usually sell the units on the exchange.

Liquidity risk	It is found that sufficient liquidity is provided by the authorized participants of Quantum Gold Fund.
	In case of liquidity issues, the fund can opt for the alternative way of buying / selling units in exchange of the underlying. The underlying can then be bought/ sold in order to deploy funds or to raise cash for redemptions.

13. Demat Account

The unit holders would have an option to hold the units in dematerialized form. The applicant intending to hold units in dematerialized form will be required to have a beneficiary account with a Depository Participant (DP) of the NSDL/CDSL and will be required to mention in the application form DP ID, DP Name and Beneficiary Account No. with the DP name at the time of subscribing to the units of the Scheme.

Investors have to ensure that the sequence of names as mentioned in the application form matches with that of the account held with the Depository Participant. If the details mentioned in the application are incomplete/incorrect, not matching with the Depository data, then Units will be issued in Physical mode and Statement of Account will be issued to the Unit holder.

For units held in demat form, the KYC performed by the Depository Participant of the applicants will be considered as KYC verification done by the Trustee/AMC.

In case of holding in demat account the bank mandate, mode of holding, nominee details, contact details etc. will be as per the details stated in the demat account and not as per this application.

In case an investor desires to redeem, the redemption request can be placed through Depository Participants and Exchanges specified intermediaries where NSE MFSS/ BSE StAR MF platform is available for redeeming of Mutual Fund Units.

Kindly note that facility to subscribe/ hold units in demat form is not available for Quantum Liquid Fund - Reinvestment of Daily IDCW Facility, Switches and SWP/ STP investments.

In case of Unit holders holding units in demat (electronic) mode, a demat statement will be sent by Depository Participant to the Unit holders.

14. List Of Documents

You are requested to enclose the relevant documents as listed in the check list of accompanying documents depending on the applicant's status and tick in the box against the document.

15. FATCA and CRS Details

FATCA is a tax reporting regime that obligates all financial institutions to report information to the relevant tax authorities about U.S reportable persons and certain entities in which U.S. persons hold a substantial ownership interest. India signed the Inter-Governmental Agreement (IGA) with the U.S. on July 9, 2015.

CRS is the OECD' & G-20's Model Competent Authority Agreement for multilateral tax information sharing. It enables automatic exchange of tax information based on the Standard through bilateral tax treaty networks. India signed the CRS Agreement on June 3, 2015. The Central Board of Direct Taxes has notified Rules 114F to 114H, as part of the Income-tax Rules, 1962, which requires Indian financial institutions to seek additional personal, tax and beneficial owner information and certain certifications and documentation from all our account holders. In relevant cases, information will have to be reported to tax authorities/appointed agencies. For meeting compliance requirements, we may also be required to provide information to any institutions such as withholding agents for the purpose of ensuring appropriate withholding from the account or any proceeds in relation thereto. If there is any change in the information provided, kindly intimate the same to us within 30 days.
