The Scheme will invest in money market instruments, Short term corporate debt securities, Tri-party Repo, TREP Repo/ Reverse repo in government securities and treasury bills only as per the prevailing regulations from time to time, only for the purpose of liquidity requirements.

The Scheme may invest in the units of debt / money market schemes of other mutual funds to gain exposure to debt as an asset class to manage any investment and regulatory constraints that arise / that prevent the Scheme from increasing investment. in the schemes of Quantum Mutual Fund.

The portfolio is reviewed periodically to address any deviations from the aforementioned allocations due to market changes.

#### **Investment Strategy**

Portfolio allocation between the units of equity, debt/ money markets and gold schemes broadly depends on the relative valuations between the asset classes. Relative valuations are determined by evaluation of various influencing factors. Some of the factors that would be reviewed thoroughly for determination of allocations across asset classes include:

- Price/Earnings Ratio relative to historical averages;
- The relationship between Earnings Yield to Bond Yield relative to historical averages;
- Macroeconomic factors prevailing globally, and within India.

The most well-known valuation parameter for equity is the Price-Earnings (P/E) ratio. The estimated earnings of a company are valued at varying multiples that result in a specific but constantly changing price. The P/E multiple is used to determine the current valuation of a stock. Typically, when the P/E ratio exceeds its historical or expected levels the stock moves to an overvalued price. As the P/E ratios of stocks increase over their historical or expected averages, the scheme will look to progressively reduce exposure to equities.

The inverse of P/E ratio is earnings yield: it is the earnings per share of the company, divided by the price per share typically expressed as a percentage. This earnings yield can be compared to the bond yield for assessing the relative over or under-valuation of stocks with respect to bonds. Earnings yields on stocks should offer investors a premium over bond yields due to the relatively higher risk associated with investing in equity – ownership of bonds give defined coupon payments, while ownership of shares does not guarantee any payments. This is referred to as the equity risk premium. When the equity risk premium falls to levels below historical averages, equities become relatively more expensive over bonds. These relative yields between bonds and stocks will provide key input to the allocation between equity and debt / money market schemes.

In addition to these market related factors, the macro environment could influence the allocation decisions. The Portfolio Team will need to assess RBI monetary policy, various global and domestic lead/ lag economic indicators, inflation trends, foreign central bank policies and evaluate their impact as the Portfolio Team determine the asset allocation between equity/ debt / money markets / gold Schemes.

#### Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

- 1. The scheme will invest predominantly in the schemes of Quantum Mutual Fund. Hence all the risk associated with the underlying schemes, including performance of the underlying schemes, asset class risk, passive investment risk, indirect taxation risk, etc., will therefore be applicable to this scheme. Any changes in the investment policy or the fundamental attributes of the underlying schemes could affect the performance of the Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying schemes.
- 2. The NAV's of the Scheme(s) may be affected by the changes in the general market conditions, factors and forces affecting the capital markets in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures, currency exchange rates, changes in the government policies, taxation laws, any other policies, political and economic developments etc.
- 3. Despite the fact that the underlying portfolio investments of the Scheme will typically be liquid in the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units.
- 4. The liquidity of the Scheme's investments is inherently restricted by liquidity of Underlying Schemes.
- 5. The investor of the Scheme shall bear the recurring expenses, transaction charges and loads if any of the Scheme in addition to the expenses, transaction charges & loads of the underlying schemes. Hence the investor under the scheme may receive lower pre-tax returns than that they could have received if they had invested directly in the underlying schemes in the same proportions.
- The portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying schemes
- 7. The changes in asset allocation may result in higher transaction costs.

#### **Risk Mitigation Factors**

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (Mutual Funds) Regulations, 1996. The Fund has identified following Risk and designed Risk Management Strategies which is the part of the Investment Process to manage such risks.

#### Type of Risks

# Liquidity Risk: The liquidity of the Scheme investments is inherently restricted by liquidity of Underlying Schemes. In the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units.

Price Risk: As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets. The NAV's of the Scheme(s) may be affected by the changes in the general market conditions, factors and forces affecting the capital markets in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures, currency exchange rates, changes in the government policies, taxation laws, any other policies, political and economic developments etc.

Allocation Risk: The returns and risk of the Scheme depends on the right mix of allocation of funds across asset classes in an optimal way so as to maximize risk adjusted performance of the Scheme. The Scheme also needs to rebalance at regular intervals to maintain the optimal allocation.

#### Risk Mitigation / Risk Management Strategies

The Scheme seeks to invest in equity, debt / money markets and gold schemes of Quantum Mutual Fund. The underlying investments held by these schemes are highly liquid and therefore result in high liquidity of the underlying schemes. In the Quantum Long Term Equity Fund which has high liquidity criteria for stocks which make the underlying investments extremely liquid. Quantum Gold Fund invests in physical gold which is also an extremely liquid market. Quantum Index Fund invests in stocks comprising the Nifty 50 which are also highly liquid. Quantum Liquid Fund also invests in liquid short term debt instruments.

The Scheme seeks to lower risk by diversifying across asset classes' viz., Equity, Debt / Money Markets and Gold. The low to negative correlation amongst the asset classes tends to lower the price risk. Also, periodical rebalancing helps to maintain the diversification and avoid over / under exposure to a particular asset class than optimally required.

The Scheme would strategize its allocation based on relative valuation models and other macro economic factors influencing each asset class. Relative valuations are determined by evaluation of various influencing factors. Some of the factors that would be reviewed thoroughly for determination of allocations across asset classes include:

- · Price/Earnings Ratio relative to historical averages
- The relationship between Earnings Yield to Bond Yield relative to historical averages
- Macroeconomic factors prevailing globally, and within India
  In addition to these market related factors, the macro
  environment could influence the allocation decisions. The
  Portfolio Team will need to assess RBI monetary policy, various
  global and domestic lead/ lag economic indicators, inflation
  trends, foreign central bank policies and evaluate their impact as
  the Portfolio/Investment Team determine the asset allocation

	determine the asset allocation between equity/ debt / money market / gold Schemes. After analyzing some or all the factors mentioned above, Investment Team determines the relative allocation to specific equity, debt / money markets and gold schemes. The allocations would be regularly reviewed and necessary portfolio changes would be carried out based on the analysis suggested by various influencing factors.  The portfolios will be critically reviewed on a periodic basis to assess the current portfolio allocations. Any decisions to change the prevailing allocations will be taken based on prevalent market conditions and the changing macro business environment.
