The asset allocation under the Scheme, under normal circumstances, will be as follows:

Instruments	Indicative allocations (% of total assets)	
	Minimum	Maximum
Money Market Instruments and other short term debt instruments with maturity / residual maturity* upto 91 calendar days	0	100

* In case of securities where the principal is to be repaid in a single payout the maturity of the securities shall mean residual maturity. In case the principal is to be repaid in more than one payout then the maturity of the securities shall be calculated on the basis of weighted average maturity of security. In case of securities with put and call options (daily or otherwise) the residual maturity of the securities shall not be greater than 91 days. In case the maturity of the security falls on a non-business day then settlement of securities will take place on the next business day.

Portfolio Rebalancing in case of deviation from Asset Allocation Under Defensive Consideration

The asset allocation pattern indicated above may change from time to time, depending on liquidity considerations or on account of high levels of subscriptions or Repurchase / Redemptions relative to Scheme size, or upon various defensive considerations including market conditions, market opportunities, applicable regulations and political and economic factors. These proportions may vary depending upon the perception of the AMC the intention being at all times to seek to protect the interests of the Unitholders. Such changes in the investment pattern will be for short term and only for defensive considerations in accordance with Para No. 1.9.1. (b) of SEBI Master Circular for Mutual Funds dated March 20, 2026. In the event of deviations from the above asset allocation table, the Fund Manager will carry out rebalancing within 30 calendar days. However, at all the times the portfolio will adhere to the overall investment objectives of the Scheme.

Portfolio Rebalancing in case of Passive Breach

Pursuant to Para No. 3.11. of SEBI Master Circular for Mutual Funds dated March 20, 2026, in the event of deviation from the above asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of the AMC), the rebalancing shall be done within 30 Business Days. In case the rebalancing is not done within 30 Business Days, then justification in writing including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee. The Investment Committee, if so desires, can extend the timelines upto 60 Business Days from the date of completion of mandated rebalancing period (i.e. 30 Business Days).

In case the portfolio of scheme is not rebalanced within the aforementioned mandated plus extended timelines, the AMCs shall:

- i. not be permitted to launch any new scheme till the time the portfolio is rebalanced.
- ii. not to levy exit load, if any, on the investors exiting from the scheme.

AMC shall report the deviation to Trustees at each stage. The reporting to Trustees shall be initiated immediately after the expiry of the mandated rebalancing period (i.e. 30 Business Days). Further, in case the AUM of deviated portfolio is more than 10% of the AUM of main portfolio of scheme, the AMC shall immediately after the expiry of the mandated rebalancing period (i.e. 30 Business Days):

1. disclose the same to the investors through SMS and email / letter including details of portfolio not rebalanced.
2. communicate to investors through SMS and email / letter when the portfolio is rebalanced.

Deviation of the portfolio, beyond the specified limits, from the mandated asset allocation beyond 30 Business Days shall also be disclosed on the website of the AMC.

The AMC shall also disclose any deviation from the mandated asset allocation to investors along with periodic portfolio disclosures as specified by SEBI from the date of lapse of mandated plus extended rebalancing timelines.

B. WHERE WILL THE SCHEME INVEST?

C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Strategy

The primary investment objective of the Scheme is to provide optimal returns with low to moderate levels of risk and high liquidity through judicious investments in money market and debt instruments.

The fund management team would endeavor to maintain consistent performance in the Scheme by balancing yields and safety as well as maintaining high liquidity.

Various risks carried by debt investments such as Interest Rate Risk, Liquidity Risk, default Risk, etc. cannot be eliminated, but can be minimized by diversification and hedging.

The fund management team has a Dynamic Model in place to balance and minimize the various risks in the debt markets.

The fund management team would actively track the local interest rate markets as well as the developments in global markets and accordingly rebalance the portfolio of the Scheme.

The investment objective would be achieved in the following order of priority:

- **Legality & compliance** – Ensuring that the portfolio is at all times completely compliant with all rules and regulations – internal and external.
- **Portfolio Liquidity** – Ensuring that the Portfolio can be liquidated at minimal impact cost to the investors.
- **Capital Preservation** – Ensuring that the investments are made in a manner to minimize market risks and choosing securities which have low default / Downgrade risk.
- **Yield and Return Enhancement** – After meeting the above objectives, the rigorous and in-depth research and analysis of the macro-economic situation and fixed income markets should provide for timely investment opportunities which enhance the total returns for an investor – on a risk adjusted basis.

The fund management team would actively track the local interest rate markets as well as the developments in global markets and accordingly rebalance the portfolio of the Scheme.

The overall Investment strategy revolves around the above laid down Investment Objectives as investors in a Liquid Fund seek optimal deployment of their surplus funds. Although the investment pattern for the scheme is for short term instruments, the research and analysis on the macro economy situation is carried out for short term as well as for a more structural and longer term horizon – so as to ensure that the portfolio investments are well positioned for all eventual and likely scenarios.

Thus, this dynamic combination of a rigorous top-down macro economy and fixed income research and emphasis on Portfolio liquidity and capital preservation is expected to offer risk adjusted returns.

INVESTMENT PROCESS AND RECORDING OF INVESTMENT DECISIONS

INVESTMENT PROCESS

The research and investment process has been reviewed and approved by the Investment Committee.

The Committee would oversee and review the investment process on an ongoing basis. All the statutory regulations including the SEBI & RBI Act, Regulations, guidelines and circulars issued from time to time would be adhered to. The investment decisions of the Scheme will be carried out by the Designated Fund Manager(s).

The performance of the Scheme would be periodically reviewed by the Board of Directors of the AMC & the Trustee.

A comprehensive Investment & Risk Policy and Procedures for investment in Fixed Income instruments has been put in place which governs the Investment Process. The Investment process is systematic, disciplined and research driven.

The research process combines the macro factors (broad economy) and micro factors (security level) for investment decisions. A brief description of the Top-Down approach is as follows:

Analysis of long term macro-economic indicators
GDP, inflation, monetary & fiscal policy and currency

Forecast the direction and the level of interest rates

Micro Analysis - Company and Instrument analysis

Credit Research, Market Research, Spreads and Liquidity Analysis

The macro & micro analysis narrows down to a list of securities based on the investment objectives and risk parameters

Credit Rating Analysis
Minimum Investment grade

Forecast the direction and the Level of Interest Rates

Company Analysis
Proprietary credit analysis – qualitative management assessment, fundamental factors, forecasts

The macro & micro analysis narrows down to a list of buyable credits for portfolio selection

Portfolio Selection
Selection based on liquidity, yields, spreads and relative value

PORTFOLIO CONSTRUCTION

The fund follows a top-down (Macro → Micro) approach to build its portfolio. The fund management team takes a view on the direction of interest rates on the basis of its analysis of long term factors and on the choice of security based on its micro analysis.

Thus, the macro and micro investment analysis leads to an efficient portfolio with regard to the following aspects:

- Maturity profile
- Credit quality
- Spread differential to its benchmark
- Liquidity
- Holding period
- Risk Profile (Average Maturity, Modified Duration)

RECORDING OF INVESTMENT DECISION

The Fund Manager(s) for the Scheme is responsible for making buy/sell decisions in respect of the securities. The investment decisions are made on a daily basis keeping in view inflows/outflows into the scheme, the market conditions, research reports and all other relevant aspects.

The Chief Executive Officer is not involved in the investment decision making process.

It is the responsibility of the AMC to ensure that the investments are made as per the internal / Regulatory guidelines, Scheme's investment objective and in the best interest of the Unit holders of the Scheme.

All investment decisions shall be recorded in accordance with provisions of Para No. 7.16. of SEBI Master Circular for Mutual Funds dated March 20, 2026, or as may be amended by SEBI from time to time..

PERFORMANCE MEASUREMENT AND REPORTING

The Investment Committee of the AMC at its regular meeting shall review performance of the Scheme, compliance of the various investment restrictions and compliance with the investment objectives stipulated in the Scheme Information Document in accordance with the SEBI (MF) Regulations. The AMC and Trustees shall also review the performance of the scheme at their periodical Board Meetings.

The Board of AMC and Trustee will review the performance of the Scheme in comparison to the performance of Benchmark and industry peers.

For details of such investments please refer the link: <https://www.quantumamc.com/fileCDN/pdf/MUTUAL-FUND-INVESTMENT-SCHEMEWISE-DATA.pdf>

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit will be computed by dividing the net assets of the Scheme/Plan/Option by the number of units outstanding under the Scheme/Plan/Option on the valuation date.

The Net Assets Value (NAV) per unit under the Scheme/Plan/Option shall be calculated as follows:

$$\text{NAV (₹)} = \text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including accrued income} - \text{Current Liabilities and Provisions including accrued expenses}$$

$$\text{No. of Units outstanding under Scheme/Plan/Option}$$

The numerical illustration of the above method is provided below:

Market or Fair Value of Scheme's investments (Rs.) = 15,00,000

Current Assets (Rs.) = 7,00,000

Current Liabilities and Provisions (Rs.) = 5,00,000

No. of Units outstanding under the Scheme = 1,30,000

$$\text{NAV per unit (Rs.)} = \frac{15,00,000 + 7,00,000 - 5,00,000}{1,30,000} = \frac{17,00,000}{1,30,000} = 13.0769$$

The NAV will be calculated and disclosed on all Business Days by 11.00 p.m. The repurchase price shall not be lower than 97% of the NAV subject to SEBI (MF) Regulation as amended from time to time. For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Sale (Subscription) and Repurchase (Redemption) Price Illustration:

Assumed NAV Rs.11.00 Per Unit, Entry Load – Nil, Exit Load – 1%

Sale Price = NAV + (Entry Load (%) (if any) * NAV)

Sale Price = 11 + (0% * 11)

Sale Price = 11 + 0

Sale Price = Rs.11/-

Repurchase Price = NAV – (Exit Load (%) * NAV)

Repurchase Price = 11 – (1% * 11)

Repurchase Price = 11 – 0.11

Repurchase Price = Rs.10.89

I. Introduction

A. Definitions/interpretation

Please refer the link:

[https://www.quantumamc.com/FileCDN/Pdf/Combined definitions & interpretations.pdf](https://www.quantumamc.com/FileCDN/Pdf/Combined_definitions_&_interpretations.pdf)

B. Risk Factors

Scheme specific risk factors:

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems. As the Scheme will be investing in debt and money market instruments it may have the following risks:

Risk Related to Debt & Money Market Instruments

- **Interest Rate Risk/Market Risk:**

Changes in interest rate may affect the Scheme's net asset value. Generally, the prices of instruments increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities fluctuate more in response to such interest rate changes than short-term securities. Indian debt and government securities markets can be volatile leading to the possibility of price movements up or down in the fixed income securities and thereby to possible movements in the NAV.

- **Credit Risk or Default Risk:**

Credit risk or Default risk refers to the risk that an issuer of a debt instrument may default (i.e. the issuer will be unable to make timely principal and interest payments on the security). Because of this risk, bonds issued by non-government agencies are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a debt instrument will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

- **Liquidity Risks:**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Reduced liquidity in the secondary market may have an adverse impact on market price and the Scheme's ability to dispose of particular securities, when necessary, to meet the Scheme's liquidity needs or in response to a specific economic event or even during rebalancing of the Scheme's investment portfolio.

- **Concentration Risk:**

The Scheme will invest in certain securities of certain companies, industries, sectors, asset type etc. based on its investment objectives and policies as outlined in this Scheme Information Document. The funds invested by the Scheme in certain securities of industries, sectors, etc. may acquire a substantial portion of the Scheme's investment portfolio and collectively may constitute a risk associated with non-diversification and thus could affect the value of investments.

- **Settlement Risk:**

Different segments of the financial markets have different settlement cycle/ periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods.

- **Re-investment Risk:**

This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cash flows than earlier assumed. the inability of the Approved Intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the Approved Intermediary.

Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the Scheme.

- **NAV Performance Risk:**

The value of, and income from, an investment in the Scheme can decrease as well as increase, depending on a variety of factors which may affect the values and income generated by the Scheme's portfolio of securities. The returns of the Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in Government and Reserve Bank of India policy, taxation, political, economic or other developments, closure of the Stock Exchanges etc.

Investors should understand that the investment pattern indicated, in line with prevailing market conditions, is only a hypothetical example as all investments involve risk and there is no assurance that the Scheme's investment objective will be attained or that the Scheme shall be in a position to maintain the model percentage of investment pattern particularly under exceptional circumstances. Different types of securities in which the Scheme would invest as stated in the offer document carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern e.g. corporate bonds carry a higher amount of risk than Government securities. Further even amongst corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

Lower rated or unrated securities are more likely to react to developments affecting the market and carry a higher credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities. The Investment Manager will consider both credit risk and market risk in making investment decisions.

The Scheme will endeavour to invest in highly researched securities offering relative yield for the commensurate risks. However, the erosion in the value of the investments/portfolio in the case of the debt markets passing through a bearish phase is a distinct possibility.

The NAV of the Scheme is largely dependent on the performance of the various debt instruments wherein the investment has been made which may fluctuate from time to time. The Scheme may use techniques and instruments for efficient portfolio management and diversify to reduce the risk of such fluctuations. However,

these techniques and instruments if imperfectly used have the risk of the Scheme incurring losses due to mismatches particularly in a volatile market. The Fund's ability to use these techniques may be limited by market conditions, regulatory limits and tax considerations (if any).

Besides, the fact that skills needed to use these instruments are different from those needed to select the Scheme's securities. The use of these techniques involves possible impediments to effective portfolio management or the ability to meet repurchase/redemption requests or other short-term obligations because of the percentage of the Scheme's assets segregated to cover its obligations.

Risk Associated with Investments in Corporate Debt Market Development Fund (CDMDF)

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help Fund Manager to generate better liquidity during market dislocation to help the scheme fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 40 of SEBI (Mutual Funds) Regulations, 2026 read with para 18.1 of SEBI Master Circular for Mutual Funds dated March 20, 2026 on investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund ('CDMDF'), the Scheme shall invest 25 bps of its AUM in the units of the CDMDF. An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

The investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

C. Risk mitigation strategies

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (MF) Regulations.

The Fund has identified the following Risks and designed Risk Management Strategies, which is the part of the Investment Process to manage such risks.

Types of Risk	Risk Management Strategies
Interest Rate Risk	<p>Measured through Average Maturity Duration / Portfolio Sensitivity to interest rate changes.</p> <p>The investment is made only in shorter tenor instruments (< 91 days) and has low duration and is thus exposed to lower market risks.</p>
Credit and Default Risk	<p>Measured through Portfolio credit quality.</p> <p>The Scheme is mandated to invest a minimum of up to 80% in instruments with the highest credit rating as given by a SEBI registered credit rating agency which helps maintain good portfolio quality.</p>
Liquidity Risk	<p>Measured through Trading Data / Portfolio Liquidity Report.</p> <p>The Scheme caps the illiquid assets as a % of portfolio to ensure that the fund remains liquid to meet redemptions.</p>
Mismatch Risk / ALM (Asset Liability Mismatch) Risk (Investor horizon and asset maturity mismatch)	<p>Measured through ALM Report.</p> <p>The scheme shall hold minimum 20% of Net assets in 'liquid assets' like cash, Treps, government securities etc. in accordance with SEBI Guidelines.</p> <p>The Fund has a well laid down ALM and Liquidity Risk Management policy which ensures that the portfolio holds sufficient liquid assets to meet potential redemption at any given point of time.</p>

Overview of Debt markets in India

Indian bond markets have grown over the years on the back of deregulation of interest rates, broad-basing of market participants, new instruments, improvement in market liquidity and increasing confidence in the trading and settlement systems. India is unique in developing markets in its success of screen based government bond trading - (NDS OM – Negotiated Dealing system – Online Module) and overnight fund deployment through a screen based order matching product known as Tri-Party Repo (TREP). As non- bank entities were phased out of the call money market, the Tri-Party Repo provided a good platform for funds deployment by mutual funds and insurance companies. It is a screen based, anonymous, clearing corporation settlement guarantee product which has resulted in its popularity and increasing volumes. Even the Repo markets have got a boost in recent times with the launch of screen based (basket and individual security) repo dealing system known as CROMS. As RBI has allowed shorting in government bond markets, the presence of an anonymous screen-based repo security borrowing mechanism is very useful for market participants. The Screen based government bond trading system – (NDS-OM) has gained in its popularity and now commands a substantial market share in the overall volume.

The major players in the Indian bond market are banks, insurance and provident /pension funds, financial institutions, mutual funds and FPIs. The debt market trading is largely institutional in nature and has limited direct retail participation. The investors invest in instruments which are issued by the government (centre and state), corporate, banks, financial institutions. The instruments are largely fixed rate but there also increasing issuances of floating rate instruments, zero coupon bonds, step up notes, perpetual bonds and other innovative structures. Indian bond market also has a long yield curve with the government issuing bonds of upto 50-year maturity. There have also been increasing instances of corporate issuing bonds with 15 year maturity.

The Indian bond market volumes have improved considerably over years. The government bond market is the largest debt segment, and it also is the most liquid market. Corporate bond market size has grown, and daily volumes are on the rise, but it is still small in comparison to the government bond market. Another interesting feature of the Indian bond market is the presence of a robust overnight borrowing and lending market. The daily volumes in the Tri-Party Repo and market Repo suggests of a highly active and liquid overnight market. Money markets in India are dominated by Treasury bills issued by the government, Certificate of Deposits issued by banks and commercial papers issued by corporate.
