Portfolio Rebalancing in case of deviation from Asset Allocation Under Defensive Consideration

The asset allocation pattern indicated above may change from time to time, depending on liquidity considerations or on account of high levels of subscriptions or repurchase / redemptions relative to Scheme size, or upon various defensive considerations including market conditions, market opportunities, applicable regulations and political and economic factors. These proportions may vary depending upon the perception of the AMC the intention being at all times to seek to protect the interests of the Unitholders. Such changes in the investment pattern will be for short term and only for defensive considerations in accordance with Para No. 1.9.1. (b) of SEBI Master Circular for Mutual Funds dated March 20, 2026. In the event of deviations from the above asset allocation table, the Fund Manager will carry out rebalancing within 30 Calendar Days. However, at all the times the portfolio will adhere to the overall investment objectives of the Scheme.

Portfolio Rebalancing in case of Passive Breach

Pursuant to Para No. 3.11. of SEBI Master Circular for Mutual Funds dated March 20, 2026, in the event of deviation from the above asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of the AMC), the rebalancing shall be done within 30 Business Days. In case the rebalancing is not done within 30 Business Days, then justification in writing including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee. The Investment Committee, if so desires, can extend the timelines upto 60 Business Days from the date of completion of mandated rebalancing period. (i.e. 30 Business Days).

In case the portfolio of scheme is not rebalanced within the aforementioned mandated plus extended timelines, the AMCs shall:

- i. not be permitted to launch any new scheme till the time the portfolio is rebalanced.
- ii. not levy exit load, if any, on the investors exiting from the scheme.

The AMC shall report the deviation to Trustees at each stage. The reporting to Trustees shall be initiated immediately after the expiry of the mandated rebalancing period (i.e. 30 Business Days). Further, in case the AUM of deviated portfolio is more than 10% of the AUM of main portfolio of scheme, the AMC shall immediately after the expiry of the mandated rebalancing period (i.e. 30 Business Days):

1. disclose the same to the investors through SMS and email / letter including details of portfolio not rebalanced.

2. communicate to investors through SMS and email / letter when the portfolio is rebalanced.

Deviation of the portfolio, beyond the specified limits, from the mandated asset allocation beyond 30 Business Days shall also be disclosed on the website of the AMC.

The AMCs shall also disclose any deviation from the mandated asset allocation to investors along with periodic portfolio disclosures as specified by SEBI from the date of lapse of mandated plus extended rebalancing timelines.

B. WHERE WILL THE SCHEME INVEST?

Subject to the SEBI (MF) Regulations and the disclosures as made under the Section “HOW WILL THE SCHEME ALLOCATE ITS ASSETS?”, the corpus of the Scheme can be invested in any (but not exclusive) of the following securities / instruments:

- a) Equity and Equity Related Instruments
- b) Equity and Equity Related Instruments other than above, including REITs
- c) Debt & Money Market Instruments
- d) Gold Exchange Traded Fund / Gold Related Instruments
- e) Units of InvITs
- f) Any other securities / asset class / instruments as permitted under SEBI (MF) Regulations in line with the investment objective of the scheme subject to regulatory approval, if any required.

Pending deployment of funds in securities in terms of investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of Scheduled Commercial Banks, subject to the guidelines issued by SEBI vide Para 13.7. of SEBI Master Circular for Mutual Funds dated March 20, 2026, as may be amended from time to time.

The Inter Scheme Transfer of securities from one scheme to another scheme of the Mutual Fund shall be made in accordance with the provisions of Para No. 13.19. of the SEBI Master Circular for Mutual Funds dated March 20, 2026 pertaining to Inter Scheme Transfer of Securities (IST).

C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Philosophy/Strategy

Portfolio allocation between the equity, debt/ money markets and gold broadly depends on the relative valuations between the asset classes. Relative valuations are determined by evaluation of various influencing factors. Some of the factors that would be reviewed thoroughly for determination of allocations across asset classes include:

1. Price/Earnings Ratio relative to historical averages;
2. The relationship between Earnings Yield to Bond Yield relative to historical averages
3. Macroeconomic factors prevailing globally, and within India.

The most well-known valuation parameter for equity is the Price-Earnings (P/E) ratio. The estimated earnings of a company are valued at varying multiples that result in a specific but constantly changing price. The P/E multiple is used to determine the current valuation of a stock. Typically, when the P/E ratio exceeds its historical or expected levels the stock moves to an overvalued price. As the P/E ratios of stocks increase over their historical or expected averages, the scheme will look to progressively reduce exposure to equities as an asset class.

The inverse of P/E ratio is earnings yield: it is the earnings per share of the company, divided by the price per share typically expressed as a percentage. This earnings yield can be compared to the bond yield for assessing the relative over or under-valuation of stocks with respect to bonds. Earnings yields on stocks should offer investors a premium over bond yields due to the relatively higher risk associated with investing in equity – ownership of bonds give defined coupon payments, while ownership of shares does not guarantee any payments. This is referred to as the equity risk premium. When the equity risk premium falls to levels below historical averages, equities become relatively more expensive over bonds. These relative yields between bonds and stocks will provide key input to the allocation between equity and debt / money market asset class.

Gold has historically acted as an effective portfolio diversifier. It generally tends to have a negative correlation to equities. Based on the above notion, allocation to gold would therefore increase at times when equities appear expensive on a relative basis and decrease at times when equities appear relatively undervalued.

In addition to these market related factors, the macro environment could influence the allocation decisions. The Portfolio/ Investment Team will need to assess RBI monetary policy, various global and domestic lead/ lag economic indicators, inflation trends, and foreign central bank policies and evaluate their impact as the Portfolio/ Investment Team determines the asset allocation between equity/ debt / money markets / gold asset classes to optimize the allocation.

After determining the optimal asset allocation, the Portfolio/ Investment Team determines the allocation to specific equity, debt / money markets and gold instruments within the asset allocation. The allocations would be regularly reviewed, and necessary portfolio changes would be carried out based on the analysis suggested by various influencing factors.

For investments in equity and equity related securities, the Scheme would predominantly invest in securities of Nifty 50 Index. The Portfolio / Investment Team, while investing in other securities in addition to Nifty 50 Stocks, will follow the following fundamental and governance criteria amongst others:

- a) Sound Management
- b) Robust Business Model
- c) Good track record of the company
- d) Potential for future growth
- e) Industry and economic scenario

The scheme will follow a combination of top-down and bottom-up approach to stock-picking and choose companies across sectors which have the potential to provide growth at reasonable valuations.

For investments in Debt Securities, the scheme will predominantly invest in sovereign and PSU debt securities to ensure that the portfolio has better liquidity and is of relatively high credit quality. The debt allocation will be actively managed, and the Fund Manager and Investment team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy as well as developments in global markets. Thus, if the Fund Manager and the Investment Team believe that long term interest rates are going to rise, the Scheme can move to instruments which have low maturity and thus low duration and help protect the Scheme's performance. Conversely, if the Fund Manager and Investment Team believe that long term interest rates are going to fall, the Scheme can invest in longer tenor instruments and thus benefit out of the larger rise in prices of longer tenor bonds.

For investments in Gold Related instruments, the scheme will predominantly invest in units of Quantum Gold ETF. In addition, the Scheme could invest in Electronic Gold Receipts as and when permitted under the SEBI Regulations.

The Fund might also have exposure to REITs and InvITs depending on the opportunities that broad markets provide from time to time.

Portfolio Turnover measures the volume of trading that occurs in a Scheme's portfolio during a given time period. The Scheme is an open-ended Scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. It will be the endeavor of the fund manager to keep portfolio turnover rates as low as possible.

PROCEDURE AND RECORDING OF INVESTMENT DECISIONS:

The investment decisions for the scheme will be carried out by the designated Fund Manager(s).

The Chief Executive Officer is not involved in the investment decision making process.

It is the responsibility of the AMC to ensure that the investments are made as per the Internal / Regulatory guidelines, Scheme's investment objective and in the best interest of the Unit holders of the Scheme.

All investment decisions shall be recorded in accordance with provisions of Para No. 7.16. of SEBI Master Circular for Mutual Funds dated March 20, 2026, or as may be amended by SEBI from time to time.

PERFORMANCE MEASUREMENT AND REPORTING

The Investment Committee of the AMC at its regular meeting(s) shall review performance of the Scheme, compliance of the various investment restrictions and compliance with the investment objective stipulated in the Scheme Information Document in accordance with the SEBI (MF) Regulations.

The Fund Manager(s) will present the performance of the Scheme to the Board of the AMC and Trustees at their respective periodical Board Meetings.

The Board of AMC and Trustee will review the performance of the Scheme in comparison to the performance of Benchmark and industry peers.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Tier I benchmark - NIFTY 50 TRI (40%) + Nifty Composite Debt Index A – III (45%) + Domestic Price of Gold (15%)

The benchmark is representative of Fund's Investment Objective and Asset Allocation and most suited for comparison for performance of the scheme.

The Trustee/AMC reserves the right to change the benchmark for the evaluation of the performance of the Scheme from time to time, keeping in mind the Investment Objective & Asset Allocation of the Scheme and the appropriateness of the benchmark.

For any other disclosure with respect to investments by key personnel and AMC directors including regulatory provisions in this regard, kindly refer the SAI.

vii. INVESTMENTS OF AMC IN THE SCHEME:

The AMC may invest in the Scheme at any time during the continuous offer period subject to the SEBI (MF) Regulations & Circulars issued by SEBI and to the extent permitted by its Board of Directors from time to time. As per the existing SEBI (MF) Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

Further, the AMC shall, based on the risk value assigned to the scheme, invest minimum amount as a percentage of assets under management of the scheme, pursuant to Para No. 7.13.1. of SEBI Master Circular for Mutual Funds dated March 20, 2026. For details of such investments please refer the link: <https://www.quantumamc.com/fileCDN/pdf/MUTUAL-FUND-INVESTMENT-SCHEMWISE-DATA.pdf>

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit will be computed by dividing the net assets of the Scheme/Plan/Option by the number of units outstanding under the Scheme/Plan/Option on the valuation date.

The Net Assets Value (NAV) per unit under the Scheme/Plan/Option shall be calculated as follows:

$$\text{NAV (')} = \text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including accrued income} - \text{Current Liabilities and Provisions including accrued expenses}$$

$$\text{No. of Units outstanding under Scheme/Plan/Option}$$

The numerical illustration of the above method is provided below:

Market or Fair Value of Scheme's investments (Rs.) = 10,00,000

Current Assets (Rs.) = 1,00,000

Current Liabilities and Provisions (Rs.) = 50,000

No. of Units outstanding under the Scheme = 1,00,000

$$\text{NAV per unit (Rs.)} = \frac{10,00,000 + 1,00,000 - 50,000}{1,00,000} = \frac{10,50,000}{1,00,000} = 10.50$$

The NAV will be calculated and disclosed on all Business Days by 11.00 p.m. The repurchase price shall not be lower than 97% of the NAV subject to SEBI (MF) Regulations, as amended from time to time. For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Sale (Subscription) and Repurchase (Redemption) Price Illustration:

Assumed NAV Rs.11.00 Per Unit, Entry Load – Nil, Exit Load – 1%

Sale Price = NAV + (Entry Load (%) (if any) * NAV)

Sale Price = 11 + (0% * 11)

Sale Price = 11 + 0

Sale Price = Rs.11/-

Repurchase Price = NAV – (Exit Load (%) * NAV)

Repurchase Price = 11 – (1% * 11)

Repurchase Price = 11 – 0.11

Repurchase Price = Rs.10.89

B. NEW FUND OFFER (NFO) EXPENSES

This section does not apply to the Scheme covered in this SID, as the ongoing offer of the Scheme has commenced after the NFO and the Units are available for continuous subscription and redemption.

C. ANNUAL SCHEME RECURRING EXPENSE

These are the fees and expenses for operating the scheme. These expenses include Investment Management and Advisory Fee charged by the AMC, Registrar and Transfer Agents' fee, marketing and selling costs etc.

The AMC may charge up to 1.85% of the daily net assets of the scheme as Base Expense Ratio (BER). For the

actual current expenses being charged, the investor should refer to the website of the Mutual Fund (www.QuantumAMC.com).

Expense Head	% of daily Net Assets
Investment Management & Advisory Fees	Up to 1.85%

Registrar & Transfer Agent Fees including cost of providing account statements / IDCW / redemption cheques/ warrants	
Marketing & Selling expenses including fees, commission and charges towards distribution of mutual fund scheme	
Cost related to investor communications	
Cost of fund transfer from location to location	
Cost towards investor education, awareness and financial inclusion	
Costs of statutory advertisements	
Other expenses (as per Regulation 66 of SEBI MF Regulations)	
Maximum Base Expense Ratio (BER) permissible under Regulation 66	Up to 1.85%
Statutory levies (including GST) on all expenses excluding brokerage and transaction cost	GST of 18% or any other rate as may be levied from time to time on the Taxable Invoice/Contract amount.
Statutory levies (including GST) on brokerage and transaction cost	Additionally Levies such as Stamp Duty, STT etc.

- **Brokerage Cost** for the purpose of execution of trade, over and above the Base Expense Ratio subject to a maximum of 0.06 per cent of trade value in case of cash market transactions and 0.02 per cent of trade value in case of derivatives transactions. Expense charged towards brokerage, over and above the specified limit, shall be part of the BER limit specified as above.

- **Transaction cost** incurred for the purpose of execution of a trade shall mean regulatory levies and any other expenses charged by the stock exchanges, clearing corporation, and clearing house, as applicable. Such transaction costs shall be over and above the Base Expense Ratio.

- **Statutory levy** means levy imposed by State Government and Central Government.

The total of all expenses charged to the investors of the scheme shall includes: Base Expense Ratio limit specified under Regulation 66(7); brokerage cost permitted under Regulation 66(9); transaction cost incurred for the purpose of execution of trade as referred under Regulation 66(10), and statutory levies charged to the investors.

- No charges other than the base expense ratio, brokerage cost, transaction cost, statutory levy and exit load including levies as may be specified by the Board, shall be charged to the investors.
- Any expenditure in excess of the base limits specified in the SEBI (MF) Regulations shall be borne by the AMC or

Trustee or Sponsor. If any expense of the scheme is borne by the AMC or by the Trustees or Sponsor, the same shall be done only after the investment and advisory fees charged to the scheme, if any, is fully reversed.

Pursuant to Para No. 11.9.1. of SEBI Master Circular for Mutual Funds dated March 20, 2026, the AMC shall annually set apart at least 0.02% of daily net assets of the Scheme for investor education, awareness and financial inclusion initiatives within the maximum Base Expense Ratio limits specified for mutual fund schemes under Regulation 66(7) of SEBI (MF) Regulations.

Following AUM slab wise base expense ratio limits shall be applicable to the Scheme:

Assets under management Slab (In Rs. crore)	Base Expense Ratio Limits
on the first Rs.500 crores of the daily net assets	1.85%
on the next Rs.250 crores of the daily net assets	1.65%
on the next Rs.1,250 crores of the daily net assets	1.40%
on the next Rs.3,000 crores of the daily net assets	1.25%
on the next Rs.5,000 crores of the daily net assets	1.15%
On the next Rs.40,000 crores of the daily net assets	Expense ratio reduction of 0.05% for every increase of Rs.5,000 crores of daily net assets or part thereof.
On balance of the assets	0.70%

Additional Commission to Distributors:

Pursuant to Para No. 11.6 of SEBI Master Circular for Mutual Funds dated March 20, 2026, as amended from time to time, Mutual Fund distributors who mobilize new investments / inflows from the following categories of investors at the mutual fund industry level shall be eligible for additional commission:

- (a) new individual investors (new PAN) from B-30 cities;
- (b) new women individual investors (new PAN) from both T-30 and B-30 cities.

Investment in the name of minor child is excluded from the applicability of incentive payment.

The structure of such additional commission shall be as under:

Investment Mode	Commission Structure
Lump Sum Investment	1% of the amount of the first application subject to a maximum of ₹2,000, provided the investor remains invested for a minimum period of one year
Systematic Investment Plan (SIP)	1% of the total investment made during the first year, subject to a maximum of ₹2,000

The additional distribution commission shall be paid from the 2 basis points on daily net assets, mandated to be set apart annually by AMCs for investor education, awareness and financial inclusion initiatives, subject to adequate claw back provisions. Such commission shall be in addition to the existing trail commission paid to the distributor from the scheme; and shall be granted only once per PAN, and no dual incentives shall be allowed in respect of the same investor or the same investment. The additional commission shall be paid after the period of completion of 1 year from the date of allotment of units.

Direct Plan shall have a lower expense ratio excluding distribution expenses, commission, etc. and no commission for distribution of Units will be paid/ charged under Direct Plan.

The Fund will disclose the Total Expense Ratio (TER) of the Scheme on a daily basis on the website of the AMC (www.QuantumAMC.com) and of AMFI (www.amfiindia.com). Any change in the Base Expense Ratio charged

to any scheme/plan shall be communicated to investors of the scheme/plan through notice via email or SMS at least three working days prior to effecting such change. Investors can refer the aforesaid notice on the AMC website at the link: <https://www.quantumamc.com/total-expense-ratio>.

ILLUSTRATION OF IMPACT OF EXPENSE RATIO ON SCHEME'S RETURN:

Particular	Regular Plan	Direct Plan
Opening NAV at the beginning of the year (Rs.) (a)	100	100
Closing NAV before charging expense at the end of the year (b)	112	112
Scheme's gross returns for the year	12%	12%
Expense Charged during the year (other than Distribution Expenses/ Commission) (Rs.) (c)	2	2
Distribution Expenses/ Commission charged during the year (Rs.) (d)	0.15	0
NAV after charging expense (b-c-d)	110.85	111
Net Return to the Investor	10.85%	11%

The purpose of the above illustration is to explain the impact of expense ratio of the scheme. Above calculations are based on assumed NAV and Expenses. The actual NAV, expenses and return on your investment may be more or less.

D. LOAD STRUCTURE

Pursuant to Para No. 11.7. of SEBI Master Circular for Mutual Funds dated March 20, 2026, there shall be no entry load charged to the scheme of the Mutual Fund.

Exit Load is an amount which is paid by the investor to redeem the units from, please refer to the website of the AMC (www.QuantumAMC.com) or may call at toll free no. (1800-22-3863 /1800-209- 3863) or your distributor.

Type of Load	Load chargeable (as % of NAV)
Exit Load / Switch Out Load:	
• If redeemed or switch out on or before 90 days from the date of allotment of units.	1.00%
• If redeemed or switch out after 90 days from the date of allotment of units.	NIL
Redemptions / Switch outs of units will be done on First In First Out (FIFO) basis. The above-mentioned load structure shall be equally applicable to the special facilities such as Systematic Withdrawal Plan (SWP) / Systematic Transfer Plan (STP) and Switches etc. However, no load shall be charged for switching between option / plan within the Scheme.	

The AMC/ Trustee reserves the right to change / modify the Load structure, if it so deems fit, in the interest of smooth and efficient functioning of the Scheme subject to provisions of SEBI (MF) Regulations. Any imposition or enhancement in the Load shall be applicable on prospective investments only.

For any change in load structure, the AMC will issue an addendum and display it on the website/Investor Service Centers.

The repurchase price shall not be lower than 97% of the NAV subject to SEBI (MF) Regulations, as amended from time to time.

I. Introduction

A. Definitions/interpretation

Please refer the link:

<https://www.quantumamc.com/FileCDN/Pdf/Combined%20definitions%20&%20interpretations.pdf>

B. Risk Factors

Scheme specific risk factors

Risks associated with investments in Equity and Equity related instruments:

- Equity instruments carry both company specific and market risks and hence no assurance of returns can be made for these investments. The investor could lose money over short periods due to fluctuation in the Scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in stock prices market movements, and over longer periods during market downturns.

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

- **Market Risk:** Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Hence, the value of the Equity and Equity Related investments may go down and an investor may not get back the amount invested.
- **Liquidity Risk:** The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio.
- **Foreign Exchange Risk:** The businesses that we might invest in might have significant reliance on imports and/or exports, which can increase their vulnerability to sharp fluctuations in Foreign Exchange rates.
- **Corporate Governance Risk:** We avoid investing in companies with inferior corporate governance. However, post our investment if poor corporate governance were to manifest in any way such as siphoning of cash, unethical business practices, manipulation of share price, etc. then it can impact the value of our investment.
- **Legislative Risk:** The value and marketability of the Company's investments may be affected by changes or developments in the legal and regulatory climate in India. Changes in law/government policies, taxation, etc. can have an adverse or a favorable impact on the underlying investments.
- **Geopolitical Risks:** Geopolitical tensions between India and any of its neighboring countries can disrupt the economic growth. Subsequently, this might have a non-linear impact on the business that the Scheme has invested in and their valuations.

Risk Related to Debt & Money Market Instruments:

- **Interest Rate Risk/Market Risk:**

Changes in interest rate may affect the Scheme's net asset value. Generally, the prices of instruments increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities fluctuate more in response to such interest rate changes than short-term securities. Indian debt and government securities markets can be volatile leading to the possibility of price movements up or down in the fixed income securities and thereby to possible movements in the NAV.

- **Credit Risk or Default Risk:**

Credit risk or Default risk refers to the risk that an issuer of a debt instrument may default (i.e. the issuer will be unable to make timely principal and interest payments on the security). Because of this risk, bonds issued by non-government agencies are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a debt instrument will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

- **Liquidity Risks:**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Reduced liquidity in the secondary market may have an adverse impact on market price and the Scheme's ability to dispose of particular securities, when necessary, to meet the Scheme's liquidity needs or in response to a specific economic event or even during rebalancing of the Scheme's investment portfolio.

- **Concentration Risk:**

The Scheme will invest in certain securities of certain companies, industries, sectors, asset type etc. based on its investment objectives and policies as outlined in this Scheme Information Document. The funds invested by the Scheme in certain securities of industries, sectors, etc. may acquire a substantial portion of the Scheme's investment portfolio and collectively may constitute a risk associated with non-diversification and thus could affect the value of investments.

- **Settlement Risk:**

Different segments of the financial markets have different settlement cycle/ periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods.

- **Re-investment Risk:**

This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cash flows than earlier assumed.

Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the Scheme.

- **NAV Performance Risk:**

The value of, and income from, an investment in the Scheme can decrease as well as increase, depending on a variety of factors which may affect the values and income generated by the Scheme's portfolio of securities. The returns of the Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in Government and Reserve Bank of India policy, taxation, political, economic or other developments, closure of the Stock Exchanges etc.

Investors should understand that the investment pattern indicated, in line with prevailing market conditions, is only a hypothetical example as all investments involve risk and there is no assurance that the Scheme's investment objective will be attained or that the Scheme shall be in a position to maintain the model percentage of investment pattern particularly under exceptional circumstances. Different types of securities in which the Scheme would invest as stated in the offer document carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern e.g. corporate bonds carry a higher amount of risk than Government securities. Further even amongst corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

Lower rated or unrated securities are more likely to react to developments affecting the market and carry a higher credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities. The Investment Manager will consider both credit risk and market risk in making investment decisions.

The Scheme will endeavour to invest in highly researched securities offering relative yield for the commensurate risks. However, the erosion in the value of the investments/portfolio in the case of the debt markets passing through a bearish phase is a distinct possibility.

The NAV of the Scheme is largely dependent on the performance of the various debt instruments wherein the investment has been made which may fluctuate from time to time. The Scheme may use techniques and instruments for efficient portfolio management and diversify to reduce the risk of such fluctuations. However, these techniques and instruments if imperfectly used have the risk of the Scheme incurring losses due to mismatches particularly in a volatile market. The Fund's ability to use these techniques may be limited by market conditions, regulatory limits and tax considerations (if any).

Besides, the fact that skills needed to use these instruments are different from those needed to select the Scheme's securities. The use of these techniques involves possible impediments to effective portfolio management or the ability to meet repurchase/redemption requests or other short-term obligations because of the percentage of the Scheme's assets segregated to cover its obligations.

Risk associated with REITs/InvITs:

- **Interest Rate Risk/Market Risk:**

Changes in interest rate may affect the Scheme's net asset value. Generally, the REITs/InvITs are valued on annuity model, and the prices of instruments increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities fluctuate more in response to such interest rate changes than short-term securities. REITs /INVITs securities markets can be volatile leading to the possibility of price movements up or down and thereby to possible movements in the NAV.

- **Credit Risk or Default Risk:**

Credit risk or Default risk refers to the risk that an issuer of a REIT or INVIT instrument may default (i.e. the issuer will be unable to make timely distributions). Because of this risk, investors may demand higher dividend or payout yield. Normally, the value of a REITs/INVITs instruments will fluctuate depending upon the changes in the perceived level of such risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

- **Liquidity Risk:**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Reduced liquidity in the secondary market may have an adverse impact on market price and the Scheme's ability to dispose of particular securities, when necessary, to meet the Scheme's liquidity needs or in response to a specific economic event or even during rebalancing of the Scheme's investment portfolio.

- **Concentration Risk:**

The Scheme will invest in certain securities of certain companies, industries, sectors, asset type etc. based on its investment objectives and policies as outlined in this Scheme Information Document. The funds invested by the Scheme in certain securities of industries, sectors, etc. may acquire a substantial portion of the Scheme's investment portfolio and collectively may constitute a risk associated with non-diversification and thus could affect the value of investments.

- **Settlement Risk:**

Different segments of the financial markets have different settlement cycle/ periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods.

- **Counterparty Risk:**

This risk refers to default from counterparty at the time of settlement due to mismatch or inadequate cashflows for distribution. This risk emerges during economic slowdown or upon losing a tenant(s) or default by existing tenant(s) that causes missing or delaying a payout to unitholders.

- **NAV Performance Risk:**

The value of, and income from, an investment in the Scheme can decrease as well as increase, depending on a variety of factors which may affect the values and income generated by the Scheme's portfolio of securities. The returns of the Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in Government and Reserve Bank of India policy, taxation, political, economic or other developments, closure of the Stock Exchanges etc.

Risk Associated with investments in Gold Instruments:

Quantum Gold ETF The underlying Scheme's NAV will react to the Gold price movements. The investor may lose money over short or long period due to fluctuation in scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in bullion prices, market movement and over longer periods during market downturns.

Although the units of Quantum Gold ETF are listed on the Stock Exchange, there can be no assurance that an active secondary market will be maintained. Trading in Quantum Gold ETF units could therefore be restricted due to which market price may or may not reflect the true NAV of the Quantum Gold ETF units at any point of time.

The market price of ETF units, like any other listed security, is largely dependent on two factors, viz. (1) the intrinsic value of the unit (or NAV) and (2) demand and supply of units in the market.

Sizable demand or supply of the units in Exchange may lead to market price of the units to quote at premium or discount to NAV. However, given the inherent fungibility offered by the ETF structure, the price of Quantum Gold ETF units is less likely to hold significant variance (large premium or discount) from the latest declaration NAV all the time.

Trading in Quantum Gold ETF units on the Exchange may be halted because of market conditions or for reasons that in view of Exchange Authorities or SEBI, trading in Quantum Gold ETF units is not advisable. In addition, trading in Quantum Gold ETF units is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI "circuit filter" rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Quantum Gold ETF units will continue to be met or will remain unchanged.

Any changes in trading regulations by the Stock Exchange(s) or SEBI may affect the ability of Authorized Participant to arbitrage resulting into wider premium / discount to NAV. Any changes in the regulations relating to import and export of gold or gold jewellery (including customs duty, GST and any other statutory levies) may affect the ability of the scheme to buy/sell gold against the purchase and redemption requests received.

The formula for determining NAV of the units of Quantum Gold ETF is based on the imported (landed) value of gold. The landed value of gold is computed by multiplying international market price by US dollar value. The value of Gold or NAV therefore will depend upon the conversion value of US dollar into Indian Rupees and attracts all the risks attached to such conversion.

Tracking error may have an impact on the performance of the Quantum Gold ETF. However, the AMC will endeavour to keep the tracking error as low as possible.

The returns from physical Gold in which the Quantum Gold ETF invests may underperform returns from the various general securities markets or different asset classes. Different types of securities tend to go through cycles of outperformance and under performance in comparison of the general securities markets.

The Quantum Gold ETF is not actively managed. The Quantum Gold ETF may be affected by a general price decline in the Gold prices. The QGF invests in the physical Gold regardless of their investment merit. The Quantum Gold ETF does not attempt to take defensive positions in declining markets.

The NAV of the units in Quantum Gold ETF is determined based on the formula for valuation of gold prescribed by SEBI whereas the actual price of gold in the domestic market may be different from the value of gold arrival at based on the prescribed formula.

For the valuation of Quantum Gold ETF units, indirect taxes like customs duty, Goods and Services Tax etc. would also be considered. Hence, any change in the rates of indirect taxation would affect the valuation of Quantum Gold ETF units.

Quantum Gold ETF - The underlying scheme may have to sell gold to meet recurring expenses. In such an event, irrespective of whether the price of gold goes up or not, the NAV of Quantum Gold ETF will go down due to such expenses.

Risk Associated with Segregated Portfolio:

- a) Investors holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- b) Security (ies) held in segregated portfolio may not realize any value.
- c) Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

C. Risk Mitigation Strategies

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (Mutual Funds) Regulations.

The Fund has identified the following Risks and designed Risk Management Strategies which is the part of the Investment Process to manage such risks.

Type of Risk	Risk Management Strategies
<p>Liquidity Risk: The liquidity of the Scheme investments is inherently restricted by liquidity of Underlying investments. In the event of receipt of an inordinately large number of redemption requests and inability of the Underlying investment(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units.</p>	<p>The liquidity of the Scheme’s investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. The scheme will invest in instruments that have ample liquidity to ensure they are saleable with limited impact costs under normal conditions, Also, Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.</p>

<p>Volatility Risk: As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.</p>	<p>The Scheme seeks to lower risk by diversifying across asset classes' viz., Equity, Debt / Money Markets and Gold and also adequately diversify within asset classes as may be necessary. The low to negative correlation amongst the asset classes tends to reduce the volatility. Also, periodical rebalancing helps to maintain the diversification and avoid over / under exposure to a particular asset class than optimally required.</p>
<p>Allocation Risk: The returns and risk of the Scheme depends on the right mix of allocation of funds across asset classes in an optimal way so as to maximize risk adjusted performance of the Scheme. The Scheme also needs to rebalance at regular intervals to maintain the optimal allocation.</p>	<p>The Scheme would strategize its allocation based on relative valuation models and other macro-economic factors influencing each asset class. Relative valuations are determined by evaluation of various influencing factors. Some of the factors that would be reviewed thoroughly for determination of allocations across asset classes include:</p> <ol style="list-style-type: none"> 1. Price/Earnings Ratio relative to historical averages 2. The relationship between Earnings Yield to Bond Yield relative to historical averages 3. Macroeconomic factors prevailing globally, and within India. <p>In addition to these market related factors, the macro environment could influence the allocation decisions. The Portfolio / Investment Team will need to assess RBI monetary policy, various global and domestic lead / lag economic indicators, inflation trends, foreign central bank policies and evaluate their impact as the Portfolio/ Investment Team determines the asset allocation between equity / debt / money market / gold.</p> <p>After analyzing some or all the factors mentioned above, Portfolio/ Investment Team determines the relative allocation to specific equity, debt / money markets and gold investments. The allocations would be regularly reviewed, and necessary portfolio changes would be carried out based on the analysis suggested by various influencing factors.</p> <p>The portfolios will be critically reviewed on a periodic basis to assess the current portfolio allocations. Any decisions to change the prevailing allocations will be taken based on prevalent market conditions and the changing macro business environment.</p>

Risk Associated with Equity & Equity Related Instruments:

Type of Risks	Risk Management Strategies
Quality risk: Risk of investing in	The investments are made predominantly in Nifty 50 stocks to ensure that investments reflect broad equity markets and in top companies by market cap.

unsustainable /weak companies	Investment in any other stock would be based on a thorough analysis of financial and governance aspects.
Price risk: Risk for overpaying for a company	The investment process for selection of underlying equity securities is valuation agnostic and investments will be made predominantly in Nifty 50 stocks.
Concentration risk:	The investments are made predominantly in Nifty 50 stocks to ensure the diversification. Given the core portfolio, is adequately diversified, any other smaller allocations will not materially alter the concentration risk.
Liquidity risk: High impact cost	The investments are made predominantly in Nifty 50 stocks to ensure portfolio liquidity. If Investment in any other stock outside the Nifty 50 stocks are made, it would be based on stock having sufficient liquidity and would generally prefer stocks meeting trading volume of at least USD 1 million on a trailing 12 months basis.
Volatility risk: price volatility due to company or portfolio specific factors	Investment in Nifty 50 represents a well-diversified portfolio across sectors thereby reducing volatility due to company or specific factors which may impact limited sectors
Changes in composition: Addition / deletion of stocks in Nifty 50 Index	The rebalancing of stocks shall be done at the appropriate time as deemed necessary to balance out portfolio optimization vs impact costs.
Changes in weightage of stock due to corporate action like merger, demerger or issue of QIP	The rebalancing of stocks shall be done at the appropriate time so that impact cost can be minimized.

Risk Associated with Debt & Money Market Instruments:

Types of Risk	Risk Management Strategies
Interest Rate Risk	<p>Since the Scheme can invest in short term and long-term instruments; interest rate risk is inherent in the portfolio.</p> <p>The management of interest rate risk is then a function of the quality of the fixed income research inputs and the active investment management strategy.</p> <p>Since the Scheme will not invest in derivatives, the management of interest rate risk would be achieved by diversification and altering the Scheme maturity profile at appropriate times.</p>
Credit and Default Risk	<p>The Scheme investment strategy limits the investments in debt instruments issued by private (non-government) companies. This reduces the inherent credit / default risk of the portfolio.</p> <p>The internal guidelines of the AMC also limit the investment in lower rated instruments. The Scheme has to necessarily invest a major portion of its</p>

	investments in Treasury securities, government bonds and/or PSU Bonds thus lowering the overall credit risk in the portfolio.
Liquidity Risk	With the overall improvement in the reporting and transparency of traded market data of all debt and money market instruments, the Investments Team can gauge the liquidity of individual instruments in the portfolio. By this, the Scheme can also determine the time taken to liquidate the position based on historical traded data.
Concentration Risk	<p>Quantum Mutual fund has a well laid out investment policy, applicable to all its debt schemes, which has set pre-defined limits of exposure to each security based on its maturity and credit profile.</p> <p>This ensures that the portfolio is not overly concentrated to one issuer or industry.</p> <p>Adequate portfolio liquidity can also help limit the losses due from large portfolio redemption.</p>
Counterparty Risk	<p>The Fund has single party counter-party limits to limit the damages from a failed settlement or delayed settlement by counterparty.</p> <p>Counterparty risk is also a function of the nature of the instrument and mode of settlement being followed.</p> <p>For instance, in government securities, the settlement of all trades are done through a clearing corporation thus ensuring lower likelihood of failed settlements and counterparty risk.</p>
Settlement Risk	<p>Government securities, T-bills, SDLs, TRI-Party Repo are now settled through a counter party clearing mechanism operated and managed by CCIL (clearing Corporation of India Ltd). This has vastly reduced settlement failures in these securities.</p> <p>Although, corporate bonds are still settled on a DVP basis, but the trades are now routed through a clearing corporation. This limits settlement failures arising out of a bilateral settlement.</p> <p>Our counterparty exposure norms also limit the risks of a failed settlement on the overall portfolio.</p>

Risk Associated with Gold Related Instruments:

Type of Risks	Risk Management Strategies
Tracking Error Risk – Risk of deviating away from the investment objective of tracking gold prices	Quantum Gold ETF - the underlying Fund follows a passive investment approach. The underlying Fund does not try to time the market. It endeavours to stay near fully invested at all times.

Quality and Purity Risk – Risk of substandard quality of gold	Gold purchased by Quantum Gold ETF - the underlying Fund is 0.995 purity and above. Gold sourced shall be from an LBMA accredited refiner only. QGF - the underlying Fund has a well-defined and specific good delivery norms policy to be followed by the custodian for acceptance of Gold.
Custody risk – There is a risk that part or the entire scheme’s gold could be lost, damaged or stolen.	To ensure the highest safety Gold is stored with renowned vaulting agencies in their professional vaults. Gold held by QGF - the underlying Fund is fully insured.

Risk associated with REITs/InvITs:

Types of Risk	Risk Management Strategies
Interest Rate Risk	Change in interest rates can lead to rise/fall in securities prices. Extent of the fall will be determined by duration of the cash flows, higher the duration steeper the rise/fall. Interest rate risk will be mitigated by diversification across securities and duration.
Credit and Default Risk	Higher debt burden or interest outgo can impact cash flows of the REIT/INVIT. This can lead to higher credit or default risk. The Scheme investment strategy limits the investments in REIT/InvIT instruments reduces the inherent credit / default risk of the portfolio.
Liquidity Risk	With the overall improvement in the reporting and transparency of traded market data of all debt and money market instruments, the Investments Team can gauge the liquidity of individual instruments in the portfolio. By this, the Scheme can also determine the time taken to liquidate the position based on historical traded data.
Counterparty Risk	The Fund has single party counter-party limits to limit the damages from a failed settlement or delayed settlement by counterparty. Counterparty risk is also a function of the nature of the instrument and mode of settlement being followed.
