📌 Yields Remain Under Pressure

Indian bonds continue to trade with a negative biased tacking the sharp rise in crude oil prices and the US treasury yield through the week. Even the lower than expected CPI print and announcement of special OMO (Operation Twist- simultaneous purchase & sale of GSECS Securities) for Rs. 100 bn to protect the yield from further rising could not cheer the market sentiments.

Overhanging supply and muted demand in government bond auctions pushed yields higher. In the weekly auction of government securities almost entire notified amount in 2 securities 5.15% GS 2025 and 5.85% GS 2030 were devolved on the primary dealers. The 10-Year government bond yield moved up to touch 6.14% during the intraday trading session after auction cut-off.

The 10-Year Government Bond 5.85% GS 2030 closed the week at 6.13% compared 5.99% a week earlier.

📌 Money Market Rates Remain Lower Due To Excess Liquidity

Liquidity condition remained in high surplus of over Rs. 6 trillion. Money market rates lowered due to excess supply. Treasury bills of 2-3 months maturities were trading between 3.15% – 3.20% and PSU CPs around 3.25%-3.30%.

RBI's steps to normalize liquidity condition will push short term money market rates higher in near term. Nevertheless, overall liquidity condition may remain in surplus for extended period until economic growth recovers significantly. Abundant liquidity will continue to keep a cap on short term yields.

📁 Portfolio Outlook

Quantum Dynamic Bond Fund (QDBF)

In the Quantum Dynamic Bond Fund, we have not taken any exposure in private sector companies and invested only in government securities, treasury bills and highest quality instruments issued by public sector undertakings (PSU) which are shortlisted under our proprietary credit research and review process. However, the fund does take interest rate risk depending on our assessment of the market outlook.

In view of increased uncertainty, we had reduced some of long bond positions and raised cash in the fund for defense against any sharp selloff. We have tactically deployed a part of that cash after the recent selloff. Nevertheless, we are still holding higher than usual cash in the fund which shows our cautious stance on the market at current levels. As on February 19, 2021 the average maturity of Quantum Dynamic Bond Fund is 4.37 years and modified duration of 3.50.

📌 Credit Exposures:

With the QLF and QDBF portfolios continuing to comprise of G-secs, T-bills and PSU securities, hence credit risk remains minimal.
