Quantum Dynamic Bond Fund

Last week started with a negative news for the bond market. Over the weekend, the central government announced to increase its market borrowings from Rs. 7.8 trillion to Rs. 12 trillion. This led to bonds opening at yields of 15-25 basis points higher on Monday. However, it erased most of the losses on subsequent trading sessions backed by a hope of the RBI buying much of the incremental supply through open market operations.

During the week the government also announced an economic package covering monetary and fiscal measures to the tune of Rs. 20 trillion (10% of GDP). Though it looks big in gross value, a deeper look at the design suggests that the immediate impact on the fiscal deficit would be limited to about Rs. 2.6 trillion (1.3% of GDP). Bond market remained unaffected by this announcement and traded with a positive bias in the later part of the week. At closing, the 10year benchmark government bond closed at the yield of 6.08% as against 5.96% in the previous week.

In short term, bond yields trajectory will be determined by the amount of bond buying and rate cuts by the RBI. The bond market doesn't have capacity to absorb such large increase in market borrowing and there is a hope that the RBI will buy a substantial chunk of government bonds through OMOs. Additionally, the market will also look for additional bond raising by states. The central government has given a conditional approval to increase states borrowing limits by 2% of state's GDP. This could lead to another Rs. 4 trillion of bond supply by state governments.

Portfolio Outlook

Quantum Dynamic Bond Fund (QDBF)

Bond markets could face increased level of volatility in the near future. Thus we advise investors in bond funds to keep market risks in mind while trying to benefit from bond funds and have a longer time frame while investing in bond funds.

In the Quantum Dynamic Bond Fund we have not taken any exposure in private sector companies and invested only in government securities, treasury bills and highest quality instruments issued by public sector undertakings (PSU) which are shortlisted under our proprietary credit research and review process. However, the fund does take interest rate risk depending on our assessment of the market outlook.

Given the increased level of uncertainty in the market we have turned cautious on the longer maturity segment of the bond curve though we continue to like the shorter maturity bonds.

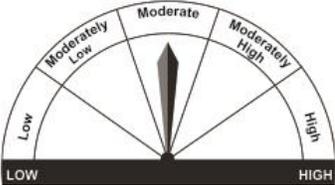

Credit Exposures:

With the QLF and QDBF portfolios continuing to comprise of G-secs, T-bills and PSU securities, hence credit risk remains minimal.
