Portfolio Rebalancing in case of deviation from Asset Allocation Under Defensive Consideration

The asset allocation pattern indicated above may change from time to time, depending on liquidity considerations or on account of high levels of subscriptions or Repurchase / Redemptions relative to Scheme size, or upon various defensive considerations including market conditions, market opportunities, applicable regulations and political and economic factors. These proportions may vary substantially depending upon the perception of the AMC the intention being at all times to seek to protect the interests of the Unitholders. Such changes in the investment pattern will be for short term and only for defensive considerations. In the event of deviations from the above asset allocation table, the Fund Manager will carry out rebalancing within 30 Calendar Days in accordance to para-

No. 2.9 of SEBI Master Circular No. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024. However, at all the times the portfolio will adhere to the overall investment objectives of the Scheme.

- c) Any other Securities / asset class / instruments as permitted under SEBI Regulations in line with the Investment Objective of the Scheme subject to regulatory approval, if any required.

C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Philosophy/Strategy

The investment strategy of the Scheme will be to invest predominantly in open-ended diversified equity schemes of Mutual Funds, which are registered with SEBI after using intensive fundamental analysis both quantitative and qualitative, monitor the portfolio regularly but not so as to engage in excessive churning, and control risk by keeping portfolio adequately diversified.

The Scheme will invest a majority of its money in open-ended diversified equity schemes that have been in existence for at least 3 years at the time of making investments. The Scheme will not invest in any sector / thematic funds. Besides, it will not make any investments in the schemes of Quantum Mutual Fund. Furthermore, the schemes that get short-listed will be tested across the quantitative and qualitative parameters, set as a part of our fund selection process.

The AMC shall appoint a Designated Agency to provide periodically the recommended list of diversified equity schemes. The research methodology to be adopted by the Designated Agency for providing the recommended list shall be reviewed by the Portfolio/Investment Team. Any Change in the research methodology shall also be reviewed by the Portfolio / Investment Team. The Scheme will invest only in the schemes which are recommended by Designated Agency only. The Designated Agency may be a bank, which distributes financial products, a research house or a distribution house. The Designated Agency may charge fees in accordance with the terms of the agreement entered into with it, which shall be borne by the AMC. The Portfolio will be reviewed and rebalanced on the receipt of the recommended list from the Designated Agency.

Presently the AMC has appointed Quantum Information Services Private Limited (QIS) as a designated agency to provide the recommended list. QIS is engaged in the business of providing research on mutual funds, financial planning and distribution services in area of personal finance, wealth accumulation, fund selection, portfolio review and provides content through its website www.personalfn.com

The AMC has the right to designate an additional Agency for obtaining the recommended list. The AMC may also change the Designated Agency, if it deems fit.

The research methodology to be adopted by the Designated Agency for providing the recommended list shall be reviewed by the Board of Directors of AMC and Trustees. Any Change in the research methodology shall also be reviewed by the Board of AMC and Trustee.

Investment Portfolio

The Scheme's investment portfolio typically will consist of investments made in open-ended diversified equity schemes of Mutual Funds registered with SEBI. The Board of the AMC or investment committee of the board of the AMC will from time to time review and approve the overall investment policy and strategy of the portfolio held by the Scheme.

While the majority of the assets will be invested in the open-ended diversified equity schemes of Mutual Funds, which are registered with SEBI, the Scheme may also invest in money market instruments and liquid schemes of Mutual Funds for the purpose of having liquidity.

The portfolio will comprise of 5 to 10 different open-ended diversified equity mutual fund schemes, and the investment in any one mutual fund scheme will be in the range of 10% to 25% of the scheme's net assets.

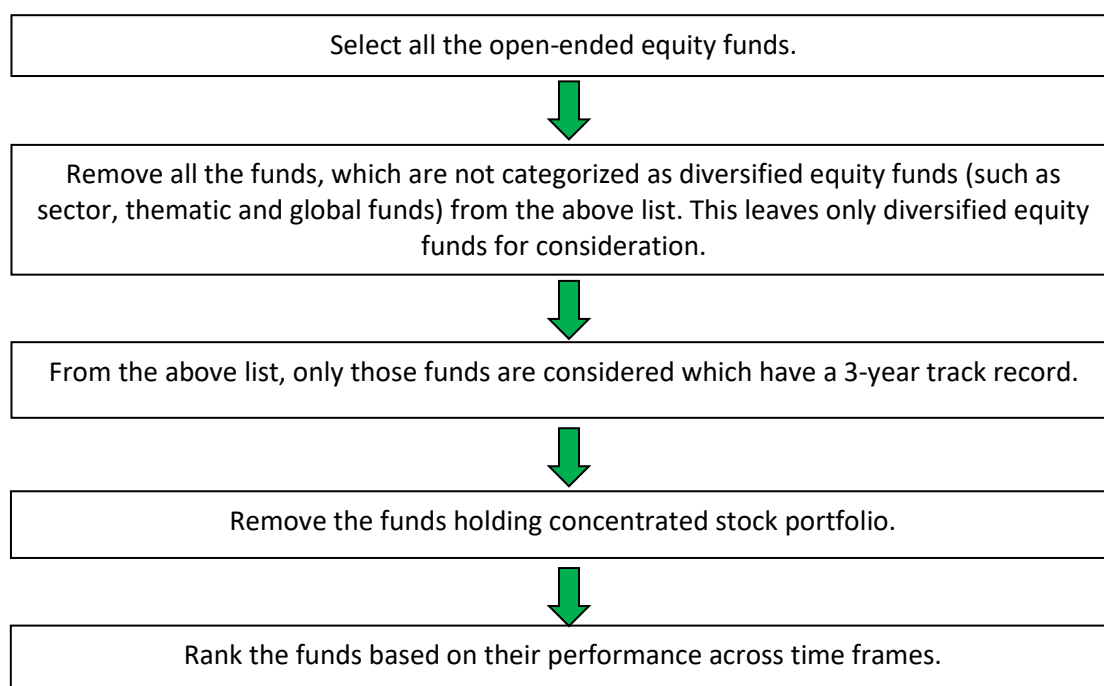

INVESTMENT PROCESS AND RECORDING OF INVESTMENT DECISIONS

INVESTMENT PROCESS

The investment process consists of:

1. Fund selection
2. Portfolio construction

1. Fund Selection

Thereafter, the short-listed funds are evaluated based on qualitative criteria. The qualitative parameters will largely judge the fund on the parameters like fund house's investment systems and processes, consistency in characteristics of its portfolio among others. Funds that emerge as the top performers shall form part of the final portfolio.

2. PORTFOLIO CONSTRUCTION

1. The scheme will only invest in third party mutual funds and will not make any investments in schemes of Quantum Mutual Fund.
2. The portfolio will have 5 to 10 open-ended diversified equity mutual fund schemes.
3. The Scheme shall not invest more than 20% of its assets in a single scheme with a 3 year track record. The overall exposure in the schemes with a 3-year track record shall not exceed 40% of the Portfolio.

B. Risk Factors

Scheme specific risk factors:

Risk Factors related to investments in Equity Schemes

1. The Scheme proposes to invest predominantly in the diversified equity schemes of Mutual Funds, registered with SEBI. Hence the scheme's performance will depend upon the performance of the underlying schemes. Any change in the investment policies or the fundamental attributes of the underlying schemes may affect the performance of the scheme.
2. Investments in underlying equity schemes will have all the risks associated with such schemes including performance of underlying stocks, derivative investments, off shore investments, stock lending, etc.
3. The investors of the Scheme shall bear the recurring expenses and loads if any of the Scheme in addition to the expenses & loads of the underlying schemes. Hence the investor under the Scheme may receive lower pre-tax returns than that they could have received if they had invested directly in the underlying schemes in the same proportions.
4. The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying schemes.
5. The changes in asset allocation may result in higher transaction costs.
6. The Portfolio of the Scheme will normally be comprised of schemes from the recommended list. Though adequate care will be taken to ensure that the methodology adopted by the Designated Agency is proper, there may be any analytical error (like assigning over weightage or under weightage to various risk - return parameters), execution error etc. by the Designated Agency, which may result in the suboptimal performance of the Scheme.
7. Since the Scheme proposes to invest at least in 5 underlying schemes, the significant underperformance in even one of the underlying schemes may adversely affect the performance of the Scheme.

Risk Related to Debt & Money Market Instruments

- **Interest Rate Risk/Market Risk:**

Changes in interest rate may affect the Scheme's net asset value. Generally, the prices of instruments increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities fluctuate more in response to such interest rate changes than short-term securities. Indian debt and government securities markets can be volatile leading to the possibility of price movements up or down in the fixed income securities and thereby to possible movements in the NAV.

- **Credit Risk or Default Risk:**

Credit risk or Default risk refers to the risk that an issuer of a debt instrument may default (i.e. the issuer will be unable to make timely principal and interest payments on the security). Because of this risk, bonds issued by non-government agencies are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a debt instrument will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

- **Liquidity Risks:**

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Reduced liquidity in the secondary market may have an adverse impact on market price and the Scheme's ability to dispose of particular securities, when necessary, to meet the Scheme's liquidity needs or in response to a specific economic event or even during rebalancing of the Scheme's investment portfolio.

- **Concentration Risk:**

The Scheme will invest in certain securities of certain companies, industries, sectors, asset type etc. based on its investment objectives and policies as outlined in this Scheme Information Document. The funds invested by the Scheme in certain securities of industries, sectors, etc. may acquire a substantial portion of the Scheme's investment portfolio and collectively may constitute a risk associated with non-diversification and thus could affect the value of investments.

- **Settlement Risk:**

Different segments of the financial markets have different settlement cycle/ periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods.

- **Re-investment Risk:**

This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cash flows than earlier assumed.

Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the Scheme.

- **NAV Performance Risk:**

The value of, and income from, an investment in the Scheme can decrease as well as increase, depending on a variety of factors which may affect the values and income generated by the Scheme's portfolio of securities. The returns of the Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in Government and Reserve Bank of India policy, taxation, political, economic or other developments, closure of the Stock Exchanges etc.

Investors should understand that the investment pattern indicated, in line with prevailing market conditions, is only a hypothetical example as all investments involve risk and there is no assurance that the Scheme's investment objective will be attained or that the Scheme shall be in a position to maintain the model percentage of investment pattern particularly under exceptional circumstances. Different types of securities in which the Scheme would invest as stated in the offer document carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern e.g. corporate bonds carry a higher amount of risk than Government securities. Further even amongst corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

Lower rated or unrated securities are more likely to react to developments affecting the market and carry a higher credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities. The Investment Manager will consider both credit risk and market risk in making investment decisions.

The Scheme will endeavour to invest in highly researched securities offering relative yield for the commensurate risks. However, the erosion in the value of the investments/portfolio in the case of the debt markets passing through a bearish phase is a distinct possibility.

The NAV of the Scheme is largely dependent on the performance of the various debt instruments wherein the investment has been made which may fluctuate from time to time. The Scheme may use techniques and instruments for efficient portfolio management and diversify to reduce the risk of such fluctuations. However, these techniques and instruments if imperfectly used have the risk of the Scheme incurring losses due to mismatches particularly in a volatile market. The Fund's ability to use these techniques may be limited by market conditions, regulatory limits and tax considerations (if any).

Besides, the fact that skills needed to use these instruments are different from those needed to select the Scheme's securities. The use of these techniques involves possible impediments to effective portfolio management or the ability to meet repurchase/redemption requests or other short-term obligations because of the percentage of the Scheme's assets segregated to cover its obligations.

C. Risk mitigation strategies

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (MF) Regulations.

The Fund has identified the following Risks and designed Risk Management Strategies which is the part of the Investment Process to manage such risks.

Risk Associated with Equity Schemes

Type of Risks	Risk Management Strategies
Scheme Selection Risk – Risk of investing in a poor performing scheme	The Fund has laid down the criteria for quantitative and qualitative ranking for selection of the schemes which pick up schemes with consistent long-term performance with an emphasis on sound research and investment process. The criteria have been followed by meeting the fund managers of the schemes to ascertain deviation from the strategy. The rebalancing of weightage is also made if necessary. The performances of the schemes have been reviewed every six months.
Portfolio concentration Risk	<p>The Fund has laid down the policy in case of portfolio holdings which has criteria for investments into the schemes, limits on the per scheme investments, per mutual fund house and schemes managed by the fund managers.</p> <p>The Fund also calculate the stock and sector concentration based on the weighted stock holdings of the scheme invested and also take corrective action by rebalancing if necessary.</p>

Risk Associated with Debt & Money Market Instruments

Types of Risk	Risk Management Strategies
Interest Rate Risk	<p>Since the Scheme can invest in short term and long-term instruments; interest rate risk is inherent in the portfolio.</p> <p>The management of interest rate risk is then a function of the quality of the fixed income research inputs and the active investment management strategy.</p> <p>The management of interest rate risk would be achieved by diversification and altering the Scheme maturity profile at appropriate times.</p>
Credit and Default Risk	<p>The Scheme investment strategy limits the investments in debt instruments issued by private (non-government) companies. This reduces the inherent credit / default risk of the portfolio.</p> <p>The internal guidelines of the AMC also limit the investment in lower rated instruments. The Scheme has to necessarily invest a major portion of its investments in Treasury securities, government bonds and/or PSU Bonds thus lowering the overall credit risk in the portfolio.</p>
Liquidity Risk	With the overall improvement in the reporting and transparency of traded market data of all debt and money market instruments, the Investments Team can gauge the liquidity of individual instruments in the portfolio. By this, the Scheme can also determine the time taken to liquidate the position based on historical traded data.

Concentration Risk	<p>Quantum Mutual fund has a well laid out investment policy, applicable to all its debt schemes, which has set pre-defined limits of exposure to each security based on its maturity and credit profile.</p> <p>This ensures that the portfolio is not overly concentrated to one issuer or industry.</p> <p>Adequate portfolio liquidity can also help limit the losses due from large portfolio redemption.</p>
Counterparty Risk	<p>The Fund has single party counter-party limits to limit the damages from a failed settlement or delayed settlement by counterparty.</p> <p>Counterparty risk is also a function of the nature of the instrument and mode of settlement being followed.</p> <p>For instance, in government securities, the settlement of all trades are done through a clearing corporation thus ensuring lower likelihood of failed settlements and counterparty risk.</p>
Settlement Risk	<p>Government securities, T-bills, SDLs, TRI-Party Repo are now settled through a counter party clearing mechanism operated and managed by CCIL (clearing Corporation of India Ltd). This has vastly reduced settlement failures in these securities.</p> <p>Although, corporate bonds are still settled on a DVP basis, but the trades are now routed through a clearing corporation. This limits settlement failures arising out of a bilateral settlement.</p> <p>Our counterparty exposure norms also limit the risks of a failed settlement on the overall portfolio.</p>
