V. RISK FACTORS

A. Standard Risk Factors

a. Standard Risk Factors for investments in Mutual Fund

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price /value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsor/AMC/ Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and the returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.1,00,000/- (Rupees One Lakh Only) made by it towards setting up the Fund.
- The present schemes are not guaranteed or assured returns schemes.

b. Risk factors of not maintaining average AUM of Rs. 20 crore on half yearly rolling basis (Applicable only for open ended debt oriented schemes)

The Debt Oriented Schemes shall maintain an average AUM of Rs. 20 crore on half yearly rolling basis. In case, the average AUM falls below Rs. 20 crore, the AMC shall scale up the AUM of such Scheme within a period of six months so as to maintain the average AUM of Rs. 20 crore on half yearly rolling basis, failing which the Scheme shall be wound up in accordance with the provisions of Regulation 36 (2) (c) of SEBI (Mutual Funds) Regulations, 2026, as amended from time to time.

c. Risks associated with different derivative strategies

As and when the Schemes trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of derivatives requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

d. Risk associated with Swing Pricing

‘Swing pricing’ refers to a process for adjusting a scheme’s NAV to effectively pass on transaction costs stemming from net capital activity to the investors associated with that activity during the life of a scheme, excluding ramp-up period or termination. In a liquidity-challenged environment, quoted bid/ask spreads and overall trading costs can widen and may not be representative of the executed prices that can be achieved in the market. Whenever swing pricing is to be invoked in accordance with the applicable regulatory requirements, the redeeming investors beyond consideration of Rs. 2 lakhs at PAN level may be subject to NAV adjusted by the swing factor which will be lower than the unswung NAV. Further, the declaration of market dislocation is a scenario that could necessitate significantly quicker action than what may occur under the current architecture. This may lead to further liquidity distress in the market.

e. Liquidity Risk Management Framework

In accordance with the SEBI and AMFI guidelines, the scheme follows the liquidity risk management framework to monitor the potential liquidity risk in the scheme from the liability side and accordingly maintain a sufficient investment in liquid assets in the scheme. The liquidity ratio (Eligible Liquid Assets/Potential Liquidity Requirement) is maintained on daily basis as per the prescribed guidelines.

Calculating and monitoring the Liquidity Ratios defines Liquidity Risk arising from the liability side and covers all potential liquidity risk scenarios upto 99% confidence interval. It also has remedial measures both for managing this risk on an ongoing basis (LR-RaR & LR-CRaR) as well as action plan in case there is a difference between actual outcome and projected outcome. The AMC has deployed remedial courses to address exceptions and a back-testing process to validate and reinforce effectiveness of the ratios.

f. Risk Associated with Investment in CDMDF

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help Fund Managers of the aforementioned Schemes to generate better liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 40 of SEBI (Mutual Funds) Regulations, 2026 read with SEBI Master Circular for Mutual Funds dated March 20, 2026 on investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund ('CDMDF'), the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the CDMDF. An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

The investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

1) Valuation of Equity and Equity Related Securities

A. Traded Equity shares

Traded equity shares are valued at the closing price on the National Stock Exchange. Where the equity share is not traded on the National stock exchange, the closing price of Bombay Stock Exchange is used. If equity share is not traded on any stock exchange on a particular valuation day, the value at which it was traded on the National stock exchange or any other stock exchange, as the case may be, on the earliest previous day may be used, provided such date is not more than 30 days prior to valuation date. The valuation committee will decide to select the appropriate stock exchange with necessary information to Board Investment committee. Once a stock exchange has been selected for valuation, reasons for change of exchange if any shall be recorded.

Freak scenario when the Nifty/Sensex falls more than 8% at the end of day with respect to previous day's close. Valuation would be done as per the closing traded price on NSE/BSE. Per se, there will be no change in the valuation methodology.

B. Non-Traded / Thinly Traded Equity Shares

If the equity and equity related securities are not traded on NSE or BSE stock exchange for a period of thirty days prior to the valuation date or it is thinly traded security as per SEBI guideline norms of trading less than 50000 shares in a month and trading value is less than Rs. 5 lacs in a month, then it will be valued as per the norms given below: -

- i. Based on the latest available Balance Sheet, net worth shall be calculated as follows:
- ii. Net Worth per share = [share capital+ reserves (excluding revaluation reserves) - Misc. expenditure and Debit Balance in P&L A/c] Divided by No. of Paid-up Shares.
- iii. Average capitalization rate (P/E ratio) for the industry based upon either BSE or NSE data (which should be followed consistently and changes, if any noted with proper justification thereof) shall be

taken and discounted by 75% i.e. only 25% of the industry average P/E shall be taken as capitalization rate (P/E ratio). Earnings per share (EPS) of the latest audited annual accounts will be considered for this purpose.

- iv. The value as per the net worth value per share and the capital earning value calculated as above shall be averaged and further discounted by 10% for ill-liquidity so as to arrive at the fair value per share.
- v. In case the EPS is negative, EPS value for that year shall be taken as zero for arriving at capitalized earning.
- vi. In case where the latest balance sheet of the company is not available within nine months from the close of the year, unless the accounting year is changed, the shares of such companies shall be valued at zero.
- vii. In case an individual security accounts for more than 5% of the total assets of the scheme, an independent valuer shall be appointed for the valuation of the said security.

C. Unlisted Equity shares

SEBI Master Circular for Mutual Funds dated March 20, 2026 has prescribed the method of valuation for unlisted equity securities. These guidelines are similar to the guidelines issued by SEBI for non-traded / thinly traded securities mentioned above only except the following:

Computation of Net worth per share as lower of (a) and (b):

(a) i) Net worth of the company = Paid up share capital + Reserves other than Revaluation reserve - Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses.

ii) Net worth per share = (Net worth of the company / Number of paid-up shares).

(b) i) Net worth of the company = Paid up capital + Consideration on exercise of Option/Warrants received/receivable by the company + free reserves other than Revaluation reserve - Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses.

ii) Net worth per share = (Net worth of the company/ Number of paid-up shares + number of shares that would be obtained on conversion/exercise of outstanding warrants and options).

If the net worth of the company is negative, the share should be marked down to Zero.

iii) Average capitalization rate (P E ratio) for the industry based upon either BSE or NSE data shall be taken and discounted by 75% i.e. only 25% of industry average P /E shall be taken as capitalization rate (P/E ratio). Earnings per share of the latest annual audited accounts shall be considered for this purpose.

iv) Computation of fair value per share to be considered for valuation at 15 % discount for illiquidity.

$[(\text{Net worth per share} + \text{Capitalized value of EPS}) / 2] * 0.85$

In case the latest balance sheet, i.e. balance sheet prepared within nine months from the close of the accounting year of the company, is not available (unless the accounting year is changed) the shares should be valued as zero.

At the discretion of the valuation committee and with the approval of the Board Investment committee, unlisted equity scrip may be valued at a price lower than the value derived using the aforesaid methodology.

2) Valuation of Stock and Index Derivatives:

a) Equity / Index Options Derivatives

i) Market values of traded open option contracts shall be determined with respect to the exchange on which contracted originally, i.e., an option contracted on the National Stock Exchange (NSE) would be valued at the settlement price on the NSE. The price of the same option series on the Bombay Stock Exchange (BSE) cannot be considered for the purpose of valuation, unless the option itself has been contracted on the BSE.

The same shall be valued at settlement price. In case settlement price is not available closing price to be considered.

b) Equity / Index Futures Derivatives

i) Market values of traded futures contracts shall be determined with respect to the exchange on which contracted originally, i.e., futures position contracted on the National Stock Exchange (NSE) would be valued at the settlement price on the NSE. The price of the same futures contract on the Bombay Stock Exchange (BSE) cannot be considered for the purpose of valuation, unless the futures contract itself has been contracted on the BSE.

ii) The same shall be valued at settlement prices. In case the same is not available then closing price to be considered.

3) Valuation of Suspended Security

In a case trading in an equity share is suspended for trading on the stock exchange up to 30 days, then the last traded price would be considered for valuation of that share.

If an equity share is suspended for trading on the stock exchange for more than 30 days then valuation committee will decide the valuation.

4) Valuation of Partly Paid-up Equity Shares

If the partly paid-up equity shares are traded in market separately then the same shall be valued at traded price (like any other equity instrument). If the same is not traded separately then partly paid equity shares shall be valued at Underlying Equity shares price as reduced by the balance call money payable with illiquidity discount as suggested by valuation committee.

If the fully paid equity shares are not traded for more than 30 days, the same shall be valued as per valuation norms given for non-traded shares with necessary illiquidity discount as decided by valuation committee.

In case of any other type of capital corporate action event or change in valuation methodology other than mentioned above, the same shall be considered on case-to-case basis with necessary approval of Valuation Committee.

5) Valuation of Mutual Fund Unit (MFU)

Mutual fund units is valued at the same day NAV as available on AMFI website. If the same day NAV is not available, it is valued at latest available NAV.

6) Valuation of Exchange Traded Fund (ETF)

1. Domestic Mutual Fund ETF Units

i) Valuation of domestic ETF's would be at closing price on NSE, if the closing price is not available on NSE then closing price on BSE would be considered. If the prices are not available on both NSE & BSE then valuation would be at fair value/NAV of the day.

Overseas Mutual Fund ETF Units

- i. Overseas Mutual Fund ETF units listed and traded on exchange on valuation date would be valued at closing price (universal close price) as on the valuation date. Exchange would be as decided by Valuation Committee.
- ii. Overseas Mutual Fund ETF units listed but not traded on valuation date would be valued at previous day closing price.
- iii. Unlisted Overseas Mutual Fund ETF units would be valued at their last available NAV as on the valuation date.
- iv. The price in local currency would be obtained by applying reference rate as declared by FBIL for respective currency.
- v. On valuation date, all assets and liabilities in foreign currency shall be converted in Indian Rupees by using reference rate declared on FBIL (erstwhile RBI Reference rate) for respective currency.
- vi. All the corporate action for Overseas Mutual Fund ETF units will be recorded on the same basis as valuation of Overseas Mutual Fund ETF units. Dividend receivables on ex-date would be converted into INR by applying reference rate declared on FBI for respective currency.

7) Valuation of Non -Traded Warrants

In respect of warrants to subscribe for shares attached to instruments, the warrants is valued at Underlying Equity Price as reduced by the amount which would be payable on exercise of the warrant. Appropriate illiquidity discount to be provided with approval of valuation committee. If the amount payable on exercise of the warrants is higher than the value of the share, the value of the warrants is taken as zero.

8) Valuation of Preference Shares

Preference shares / securities shall be valued at closing price on Stock Exchange. If the closing price on Exchange is not available, then average of valuation prices provided by valuation agencies i.e. CRISIL/ICRA would be considered. If the price is not available from both then it will be valued as per the approval of the valuation committee."

9) Valuation of Shares on De-merger and Merger and Other Corporate Action Events:

On de-merger following possibilities arise which influence valuation, these are:

Both the shares are traded immediately on de-merger: In this case both the shares are valued at respective traded prices.

Shares of only one company continued to be traded on de-merger: The cost of demerged entity will be bifurcated between 2 companies based on demerger ratio. The price of shares, which is listed and traded after demerger will be valued at that price. The price of shares which is not listed will be valued

at price arrived at by difference in price between last traded price before demerger less the traded price of shares which is traded post demerger. It will also be ensured that total market value of both securities added together post de merger is equivalent to the pre demerger market value. Valuation Committee will decide whether the illiquidity discount to be applied wherever required while arriving at final valuation price. This will be followed till 30 days. Post that if the prices are not available, then it will be valued based on fair price with necessary approval of valuation committee.

Both the shares are not traded on de-merger: Shares of de-merged companies are to be valued equal to the pre-de-merger value up to a period of 30 days from the date of de-merger. The total cost value of shares post demerger should be bifurcated in the demerger ratio and should be equivalent to the pre demerger cost. The market price also will be bifurcated in same manner till both the companies are listed and traded post demerger. Valuation Committee will decide the illiquidity discount to be applied wherever required while arriving at final valuation Price. If post 30 days, the prices are not available then it will be valued based on fair price with necessary approval of valuation committee.

In case of any other type of capital corporate action event or change in valuation methodology other than mentioned above, the same shall be considered on case-to-case basis with necessary approval of Valuation Committee.

In case of merger of 2 companies post-merger valuation price would be market price of merged entity as available on NSE. Post merger if merged company is not listed then aggregate market price of last day of merger date of both companies to be considered. In case of any other type of capital corporate action event or change in valuation methodology other than mentioned above, the same shall be considered on case-to-case basis with necessary approval of Valuation Committee.

10) Valuation of Non-Traded Thinly Traded Rights Entitlements:

Till the rights are subscribed, the entitlements as per Regulations have to be valued as under:

- ii) Where right entitlements are not traded and it is decided not to subscribe to the rights, the right entitlements have to be valued at zero.
- iii) In case the Rights Offer Price is greater than the ex-rights price, the value of the rights share is to be taken as zero.
- iv) In case original shares on which the right entitlement accrues are not traded on the Stock Exchange, right entitlement should be valued at zero
- v) Valuations of non-traded/thinly traded/Unlisted rights entitlement, SEBI Regulations have explained this with the help of following formula and the security will be valued accordingly:

$V_r = n/m \times (P_{ex} - P_{of})$ Where

V_r = Value of Rights

n = No. of rights offered

m = No. of original shares held

P_{ex} = Ex-right price

P_{of} = Rights offer price

vi) Valuation Committee will decide whether the illiquidity discount to be applied wherever required while arriving at final valuation Price

vii) In case of any other type of capital corporate action event or change in valuation methodology other than mentioned above, the same shall be considered on case-to-case basis with necessary approval of Valuation Committee.

11) Valuation of Convertible Debentures

Non-convertible and convertible components are valued separately.

The non-convertible component shall be valued on the same basis as would be applicable to a non-convertible debt instrument mentioned in this policy.

The convertible component to be valued as follows:

i) Ascertain

- The number of shares to be received after conversion.
- Whether the shares would be pari passu for dividend on conversion.
- The rate of last declared dividend.
- Whether the shares are presently traded or non-traded/thinly traded.
- Market rate of shares on the date of valuation

ii) In case the shares to be received are, on the date of valuation, are thinly traded / non-traded, these shares to be received on conversion are to be valued as thinly traded / non-traded shares as stated.

a) Number of shares to be received on conversion, per convertible debenture, multiplied by the present market rate

b) Determine the discount for non-tradability of the shares on the date of valuation.

(This discount should be determined in advance and to be used uniformly for all the convertible securities. Rate of discount should be documented and approved by the valuation committee.)

$$\text{Value} = (a) * \text{market rate} [1 - (b)]$$

iv) In case the shares to be received on conversion are not non-traded or thinly traded on the date of valuation but would not be traded pari passu for dividend on conversion:

a) Number of shares to be received on conversion, per convertible debenture, multiplied by the present market rate

b) Arrive at the market value of the shares on the date of valuation by reducing the amount of last paid dividend.

c) Determine the discount for non-tradability of the shares on the date of valuation.

(This discount should be determined in advance and to be used uniformly for all the convertible securities. Rate of discount should be documented and approved by the valuation committee and Board Investment Committee.)

$$\text{Value} = (a) * \{b * [1 - (c)]\}$$

v) In case of optionally convertible debentures, two values must be determined assuming both, exercising the option and not exercising the option.

- If the option rests with the issuer, the lower of the two values shall be taken as the valuation of the optionally convertible portion, and;
- If the option rests with the investor, the higher of the two values shall be taken.

12) Valuation of Gold

For the purpose of Gold Valuation, process shall be as below:-

1. LBMA Gold Fixing: As per SEBI Guidelines Gold is valued at AM fixing price available on the LBMA site for the day sourced from Thomson Reuters. In case the LBMA AM Fix is not published on a particular day then we would take an average international spot gold price rate prevailing on that day between half an hour before the London AM Fix time to half an hour later than the London AM Fix time from Bloomberg. If this is not available, then the average international gold spot price for the last half an hour of trade prevailing before the closing of the international spot gold markets as available on Bloomberg (code: Golds Commodity) will be considered for valuation.
2. LBMA Gold Price is quoted for USD/troy ounces. For conversion of Troy Ounces to Kilogram and adjustment for purity to 0.995 fineness we use the conversion factor of 31.99. Depending on the fineness of gold bar the adjustment factor would change. In case of gold lying in stock is of 999 fineness, the conversion factor would be 32.12 for 999 fineness.
3. To convert it from USD to Rupee by foreign currency reference rate available from FBIL is applied. In case foreign currency reference rate is not available for any day then the latest available reference rate will be considered.
4. The Indian levies in the form of custom duty, stamp duty, is added as applicable as prescribed by relevant authorities to arrive at the final landed price of gold. However, GST is not being added to the valuation prices since as per the GST Act input credit is available when Gold is bought/Sold. GST paid/received during purchase/sale transactions is accounted as current assets/current liabilities in the books of accounts.
5. The premium/ discount shall be determined on a daily basis to ensure that final valuation price reflects the fair value. The premium / discount shall be decided by comparing the domestic price i.e. MCX spot day end price (around 5:30pm) or any other source as approved by the Valuation Committee with the above calculated valuation price. Premium or discount calculated shall be added to LBMA price.

G. Information pertaining to Investments by the Schemes of the Fund

1. Derivative strategies

The Schemes may use derivatives for the purpose of hedging and portfolio balancing as prescribed in the Scheme Information Document of the Scheme subject to SEBI (Mutual Funds) Regulations, 2026. The Fund doesn't intend to take derivative positions in normal circumstances. If deemed necessary, the fund may take opportunistic exposure to stock derivatives or index derivatives or commodities derivatives. The derivative position may be used to ensure liquidity at specified limit prices or hedging purpose. Presently, no scheme of the Fund has any investment in derivatives.

2. Swing Pricing

Mandatory Swing Pricing During Market Dislocation

- Swing Pricing: Swing pricing refers to a process for adjusting a scheme's Net Asset Value (NAV) to effectively pass on transaction costs stemming from significant net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity. Swing pricing is aimed at reducing the impact of large redemptions, particularly during market dislocation, on existing investors by reducing dilution of the value of units of a Mutual Fund scheme.
- Market Dislocation Period: Market dislocation would be declared and notified by SEBI. Swing pricing will be applicable for a specified period as notified by SEBI.
- Applicability of Swing Pricing Framework: Subsequent to the announcement of market dislocation by SEBI, the swing pricing framework shall be mandated only for the Debt Schemes:
 - Which has **High or Very High risk** on the risk-o-meter in terms of SEBI Master Circular for Mutual Funds dated March 20, 2026 (as of the most recent period at the time of declaration of market dislocation); and

(ii) classify themselves in the cells **A-III, B-II, B-III, C-I, C-II and C-III** of Potential Risk Class (PRC) Matrix in terms of SEBI Master Circular for Mutual Funds dated March 20, 2026.

4. Swing Factor: The minimum swing factor as given below will be applicable. This shall be made applicable to the schemes mentioned above and the NAV will be adjusted downwards for both the incoming and outgoing investors.

Minimum swing factor for open ended debt schemes			
Credit Risk of scheme →	Class A (CRV*≥12)	Class B (CRV≥10)	Class C (CRV<10)
Interest Rate Risk of scheme ↓			
Class I: (MD≤1 year)	NIL	NIL	1.50%
Class II: (MD≤3 years)	NIL	1.25%	1.75%
Class III: Any Macaulay duration (MD)	1.00%	1.50%	2.00%
*CRV: Credit Risk Value			

5. Applicability of Swing Pricing to Investors: When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the incoming and exiting investors shall get NAV adjusted for swing pricing. Swing pricing shall be made applicable to all unitholders at PAN level, with an exemption for redemptions up to Rs.2 lakhs for each mutual fund scheme for market dislocation.

6. Illustration:

Consider a scheme having NAV of Rs 100 and swing factor of 1%, the NAV shall be adjusted as below on issue of notification of market dislocation by SEBI:

$$\begin{aligned}
 \text{Swung NAV} &= \text{unswung NAV} * (1 - \text{swing factor}) \\
 &= \text{Rs } 100 * (1 - 0.01) \\
 &= \text{Rs. } 100 * (0.99) \\
 &= \text{Rs. } 99
 \end{aligned}$$

If there is any exit load applicable as per scheme provisions, the same will be applied on swung NAV.

7. Computation of NAV for purpose of scheme performance: The scheme performance shall be computed based on unswung NAV.

Mandatory Swing Pricing in case of ‘re-opening of the scheme(s) after announcement of winding up’

1. There may be instances where the AMC, after making an announcement to wind up a scheme, decides to roll-back the decision to wind up the scheme. Such situations may trigger large scale redemptions.
2. In such circumstances, the AMC shall mandatorily invoke swing pricing upon re-opening of the Scheme for subscriptions and redemptions.
3. The swing factor applied in this case would be as follows:

Swing factor on re-opening of scheme(s) after announcement of winding-up			
Max Credit Risk of scheme →	Class A (CRV* \geq 12)	Class B (CRV* \geq 10)	Class C (CRV* $<$ 10)
Max Interest Rate Risk of the scheme ↓			
Class I: (Macaulay duration \leq 1 year)	Nil	0.05%	0.20%
Class II: (Macaulay duration \leq 3 years)	0.05%	0.10%	0.40%
Class III: Any Macaulay duration	0.10%	0.20%	0.60%

*CRV: Credit Risk Value

Note: The above are floor swing amounts and the Board of the AMC may set higher limits, depending on the dynamics of the concerned scheme(s) both on liability side and on asset side.

4. The swing period shall be a minimum of 7 working days or higher as decided by the Board of AMC considering prevailing market conditions.

3. Creation of Segregated Portfolio / Side Pocketing

investors in proportion to their holding in the Segregated Portfolio. Any recovery of amount of the security in the Segregated Portfolio even after the write off shall be distributed to the investors of the Segregated Portfolio.
